

TENTATIVE TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

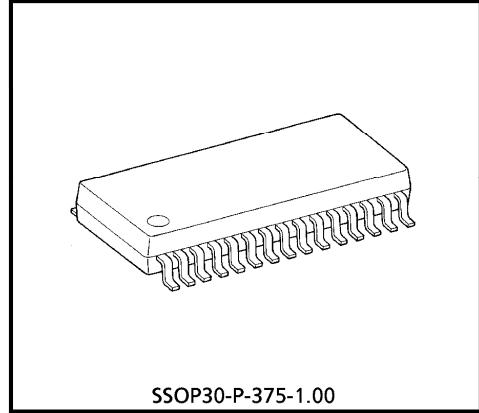

# TA8876FA

## FOR LCD TVS, PIF, QIF, AND SIF SYSTEMS

### FEATURES

#### PIF circuit

- High-speed response peak AGC with dual time constant
- Forward / Reverse RF AGC output
- Output with black noise inverter
- Output without black noise inverter
- Video output adjustment
- Single polarity AFT output
- Built-in sync. separation circuit

SSOP30-P-375-1.00

Weight : 0.63 g (Typ.)

#### QIF circuit

- Intercarrier demodulation block with same structure as in PIF circuit
- Independent mean value AGC detection

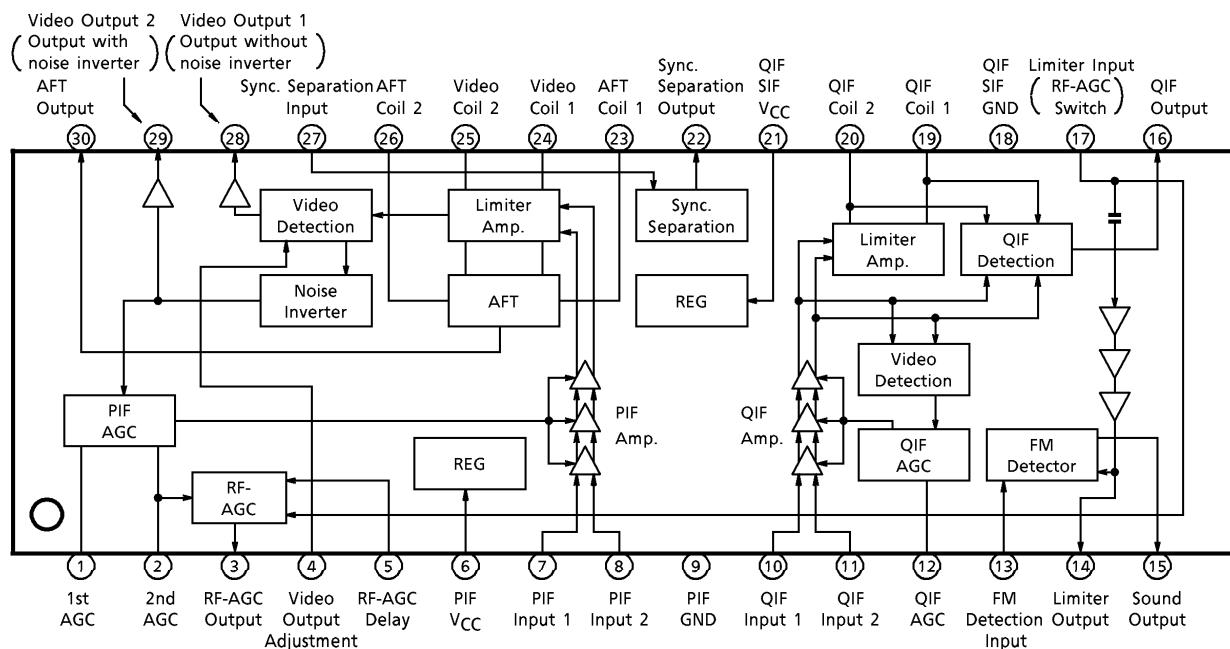

#### SIF circuit

- Sound IF amplification and detection
- Quadratcher-type detector circuit
- Use of a ceramic discriminator device makes the SIF circuit adjustment-free.
- Sound mute switch

980910EBA2

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

## BLOCK DIAGRAM

## TERMINAL FUNCTION

## TERMINAL LIST

| PIN No. | PIN NAME                         | FUNCTION  |
|---------|----------------------------------|---|
| 1       | 1st-AGC                          | 1st AGC filter terminal                                       |
| 2       | 2nd-AGC                          | 2nd AGC filter terminal                                       |
| 3       | RF-AGC Output                    | RF AGC output (Reverse / Forward switchable)                  |
| 4       | VIDEO ADJ.                       | Can adjust video output. (Normally connect Condenser.)        |
| 5       | AGC Delay                        | RF AGC delay point adjustment terminal                        |
| 6       | PIF VCC                          | PIF circuit power supply terminal                             |
| 7       | PIF Input 1                      | PIF signal input terminal                                     |
| 8       | PIF Input 2                      | PIF signal input terminal                                     |
| 9       | PIF GND                          | PIF circuit GND terminal                                      |
| 10      | QIF Input 1                      | QIF signal input terminal                                     |
| 11      | QIF Input 2                      | QIF signal input terminal                                     |
| 12      | QIF AGC                          | QIF AGC filter terminal                                       |
| 13      | FM Detection Input               | Sound FM detector input terminal                              |
| 14      | Limiter Output                   | Sound limiter output terminal                                 |
| 15      | Sound Output                     | Sound output terminal   |
| 16      | QIF Output                       | QIF signal output terminal                                    |
| 17      | Limiter Input<br>(RF-AGC Switch) | Sound limiter input terminal (Also used for RF-AGC switching) |
| 18      | QIF / SIF GND                    | QIF and SIF circuit GND terminal                              |

| PIN No. | PIN NAME  | FUNCTION   |
|---------|---|--|
| 19      | QIF Coil 1  | QIF detector carrier extraction terminal                           |
| 20      | QIF Coil 2  | QIF detector carrier extraction terminal                           |
| 21      | QIF/SIF V <sub>CC</sub>                           | QIF and SIF circuit power supply terminal                          |
| 22      | Sync. Separation Output                           | Sync. signal output terminal                                       |
| 23      | AFT Coil 1  | AFT detector coil terminal   |
| 24      | Video Coil 1                                      | PIF detector carrier extraction terminal                           |
| 25      | Video Coil 2                                      | PIF detector carrier extraction terminal                           |
| 26      | AFT Coil 2  | AFT detector coil terminal   |
| 27      | Sync. Separation Input                            | Sync. signal input terminal  |
| 28      | Video Output 1<br>(Output without noise inverter) | Video detection output terminal<br>(Output without noise inverter) |
| 29      | Video Output 2<br>(Output with noise inverter)    | Video detection output terminal<br>(Output with noise inverter)    |
| 30      | AFT Output  | AFT control voltage output terminal                                |

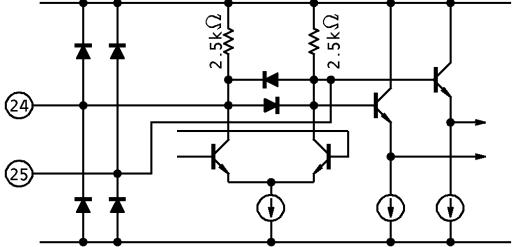

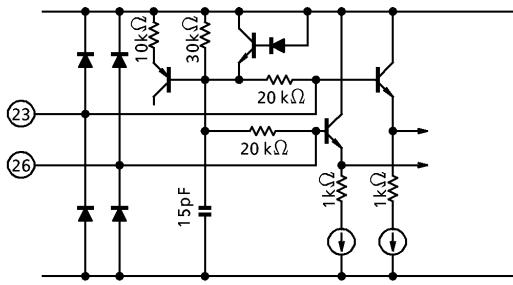

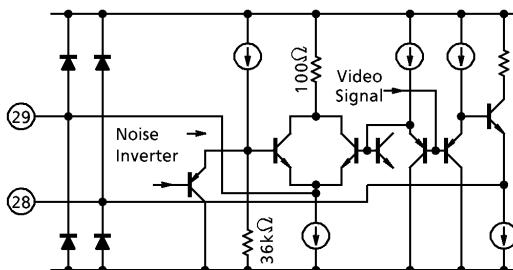

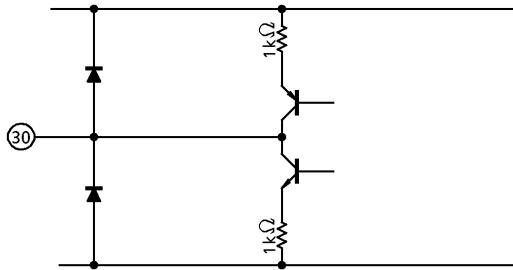

## TERMINAL FUNCTION

| PIN No. | PIN NAME      | FUNCTION   | INTERFACE CIRCUIT |
|---------|---------------|--|-------------------|
| 1<br>2  | PIF AGC       | Uses dual time constant to speed up AGC.<br>To mute picture, connect pin 1 to GND. |                   |
| 3       | RF AGC Output | Emitter follower-type RF AGC output. Max. output 3 mA (typ.)                       |                   |

| PIN No. | PIN NAME                | FUNCTION   | INTERFACE CIRCUIT |
|---------|-------------------------|--|-------------------|
| 4       | Video Output Adjustment | Used to adjust video output amplitude.<br>This pin has internal bias.<br>Opening this terminal fixes video output amplitude to 1.0 V <sub>p-p</sub> . Toshiba recommends connecting 0.01 $\mu$ F to prevent noise. |                   |
| 5       | RF AGC Delay            | Changing comparator reference voltage adjusts RF AGC delay point.  |                   |
| 6       | PIF V <sub>CC</sub>     | Insert bypass condenser between this terminal and pin 9.   | —                 |
| 7<br>8  | PIF Input               | PIF signal input terminal.<br>Input impedance is 5 kΩ (typ.).  |                   |
| 9       | PIF GND                 | Insert bypass condenser between this terminal and pin 6.   | —                 |

| PIN No.  | PIN NAME                           | FUNCTION  | INTERFACE CIRCUIT |
|----------|------------------------------------|---|-------------------|
| 10<br>11 | QIF Input                          | QIF signal input terminal.<br>Input impedance is $5\text{ k}\Omega$ (typ.).   |                   |
| 12       | QIF AGC                            | AGC terminal of QIF detector circuit.   |                   |
| 13<br>15 | FM Detection Input<br>Sound Output | Sound detection terminal for coil, which is connected between this terminal and pin 14.<br>FM detector circuit output terminal.   |                   |
| 14       | Limiter Output                     | Sound detection terminal for coil, which is connected between this terminal and pin 13.<br>Applying ceramic discriminator sets this circuit to non-adjustable circuit.<br>To mute sound, connect pin 13 to GND. |                   |

| PIN No.  | PIN NAME               | FUNCTION   | INTERFACE CIRCUIT |
|----------|------------------------|--|-------------------|
| 16       | QIF Output             | QIF detection output terminal.<br>Connect this terminal to SIF input via BPF.<br>For BPF matching, see function of pin 17.   |                   |
| 17       | SIF Input<br>RF AGC SW | Connect to pin 16, via BPF.<br>This terminal also functions as output polarity switching circuit of RF AGC output.<br>Internal impedance is designed to be 2 kΩ. Externally connecting 2 kΩ between this terminal and GND outputs reverse AGC and changes input impedance to 1 kΩ.<br>Externally connecting a 2 kΩ-resistor between this terminal and VCC outputs forward AGC and changes input impedance to 1 kΩ. |                   |
| 18       | QIF GND<br>SIF         | Insert bypass condenser between this terminal and pin 21.  | —                 |
| 19<br>20 | QIF Coil               | This terminal connects QIF detection coil.   |                   |
| 21       | QIF<br>SIF VCC         | Insert bypass codenser between this terminal and pin 18.   | —                 |
| 22<br>27 | Sync.<br>Separation    | Sync. separation circuit required for tuner's search function.   |                   |

| PIN No.  | PIN NAME            | FUNCTION   | INTERFACE CIRCUIT  |
|----------|---------------------|--|--|
| 24<br>25 | Video Coil          | Connects video detection coil.   |    |
| 23<br>26 | AFT Coil            | Connects AFT detection coil.<br>To improve AFT characteristics, two-pin-type circuit is used.  |    |
| 28<br>29 | Video Signal Output | Video signal output terminal.<br>Pin 28 is output that does not go through noise inverter, and can thus be used for diversity processing, for example. Pin 29 incorporates built-in noise inversion circuit.<br>Output amplitude from both of these terminals can be adjusted using pin 4. |   |
| 30       | AFT Output          | AFT detector output terminal based on double balanced-type multiplier.   |  |

**MAXIMUM RATINGS (Ta = 25°C)**

| CHARACTERISTIC        | SYMBOL                | RATING  | UNIT |
|-----------------------|-----------------------|---------|------|
| Power Supply Voltage  | V <sub>CC</sub>       | 8       | V    |
| Power Dissipation     | P <sub>D</sub> (Note) | 500     | mW   |
| Operating Temperature | T <sub>opr</sub>      | -20~75  | °C   |
| Storage Temperature   | T <sub>stg</sub>      | -55~150 | °C   |

(Note) When using the device at above Ta = 25°C, decrease the power dissipation by 4 mW for each increase of 1°C.

**RECOMMENDED POWER SUPPLY**

| PIN No. | PIN NAME                | MIN. | TYP. | MAX. | UNIT |
|---------|-------------------------|------|------|------|------|
| 6       | PIF V <sub>CC</sub>     | 3.5  | 4.5  | 7.5  | V    |
| 21      | QIF SIF V <sub>CC</sub> | 3.5  | 4.5  | 7.5  | V    |

**ELECTRICAL CHARACTERISTICS**

DC CHARACTERISTICS (Unless otherwise specified, V<sub>CC</sub> = 4.5 V, Ta = 25°C)

| CHARACTERISTIC   | SYMBOL    | TEST CIR-CUIT | TEST CONDITION                             | MIN. | TYP. | MAX. | UNIT |
|------------------|-----------|---------------|--|------|------|------|------|
| Terminal Voltage | Pin 3 (1) | V3 (L)        | SW <sub>2</sub> = a<br>SW <sub>2</sub> = b | 0.0  | —    | 0.5  | V    |
|                  | Pin 3 (2) | V3 (H)        |  | 3.5  | 3.8  | 4.0  |      |
|                  | Pin 7     | V7            |  | 2.4  | 2.9  | 3.4  |      |
|                  | Pin 8     | V8            |  | 2.4  | 2.9  | 3.4  |      |
|                  | Pin 10    | V 10          |  | 2.4  | 2.9  | 3.4  |      |
|                  | Pin 11    | V 11          |  | 2.4  | 2.9  | 3.4  |      |
|                  | Pin 13    | V 13          |  | 3.4  | 3.7  | 4.0  |      |
|                  | Pin 16    | V 16          |  | 1.5  | 2.0  | 2.5  |      |
|                  | Pin 19    | V 19          |  | 3.8  | 4.1  | 4.4  |      |
|                  | Pin 20    | V 20          |  | 3.8  | 4.1  | 4.4  |      |
|                  | Pin 23    | V 23          |  | 4.2  | —    | 4.5  |      |
|                  | Pin 24    | V 24          |  | 3.8  | 4.1  | 4.4  |      |
|                  | Pin 25    | V 25          |  | 3.8  | 4.1  | 4.4  |      |
|                  | Pin 26    | V 26          |  | 4.2  | —    | 4.5  |      |
|                  | Pin 28    | V 28          |  | 1.5  | 2.0  | 2.5  |      |
|                  | Pin 29    | V 29          |  | 1.5  | 2.0  | 2.5  |      |
|                  | Pin 30    | V 30          |  | 1.3  | 2.3  | 3.3  |      |

AC CHARACTERISTICS (Unless otherwise specified,  $V_{CC} = 4.5\text{ V}$ ,  $T_a = 25^\circ\text{C}$ )  
 PIF circuit (When using the specified coil)

**TEST CONDITIONS**

&lt; PIF circuit &gt;

(Note 1) Input sensitivity

PIF input : f = 58.75 MHz, fm = 15.75 kHz, 30% AM, 84 dB $\mu$ V.

Gradually reduce the input level. Measure the input level when the detection output at video output-2 will be -3 dB.

(Note 2) Maximum input level

PIF input : f = 58.75 MHz, fm = 15.75 kHz, 30% AM, 84 dB $\mu$ V.

Gradually raise the input level. Measure the input level when the detection output at video output-2 is at the noise inverter threshold.

(Note 3) No-signal level

PIF input : No input. 2nd AGC terminal : GND

Measure DC voltage at video output-2.

(Note 4) Sync. Tip level

PIF input : f = 58.75 MHz, standard television signal (V/S = 10 : 4 ramp waveform), 87.5% AM, 84 dB $\mu$ V.

Measure sync. Tip DC voltage at video output-2.

(Note 5) Video output amplitude

PIF input : f = 58.75 MHz, standard television signal (V/S = 10 : 4 ramp waveform), 87.5% AM, 84 dB $\mu$ V.

Measure amplitude level at video output-2.

(Note 6) Video S/N ratio

PIF input : f = 58.75 MHz, fm = 15.75 kHz, 30% AM, 84 dB $\mu$ V.

Using the RMS voltmeter, measure the detection output at video output-2.

Then, using the RMS voltmeter, measure the video detection output without modulation.

$$S/N = 20 \log \left[ \frac{\text{Value with modulation (mV}_{\text{rms}}\text{)}}{\text{Value without modulation (mV}_{\text{rms}}\text{)}} \right] \times 6 \text{ [dB]}$$

## (Note 7) Detection output bandwidth

PIF input :  $f = 58.75 \text{ MHz}$ ,  $84 \text{ dB}\mu\text{V}$  CW.

Measure 2nd AGC terminal voltage and fix the terminal to that voltage using the external power supply.

Then, input the following composite signals to the PIF input.

(1) SG 1 :  $58.75 \text{ MHz}$ ,  $84 \text{ dB}\mu\text{V}$  (Frequency fixed)

(2) SG 2 :  $58.65 \text{ MHz} \sim 45 \text{ MHz}$ ,  $64 \text{ dB}\mu\text{V}$  (Frequency variable)

Monitor video output-2 with a spectrum analyzer. Vary SG2 to find frequency  $f$  when the detection output will be  $-3 \text{ dB}$ .

Calculate the difference between that frequency and  $58.75 \text{ MHz}$ .

## (Note 8) Black noise inverter, clamp level

PIF input :  $f = 58.75 \text{ MHz}$ ,  $fm = 15.75 \text{ kHz}$ ,  $30\% \text{ AM}$ ,  $84 \text{ dB}\mu\text{V}$ .

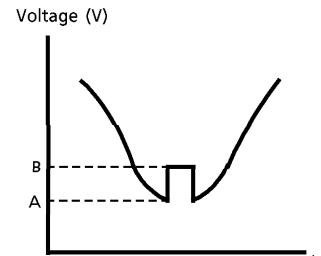

Measure the 2nd AGC terminal voltage and fix the terminal to that voltage using the external power supply.

Then, gradually raise the 2nd AGC terminal voltage and fix the voltage when a waveform like that in the accompanying diagram is output.

At that time, the A and B voltages are :

A : Black noise inverter level

B : Black noise clamp level

## (Note 9) Carrier wave rejection ratio

PIF input :  $f = 58.75 \text{ MHz}$ ,  $fm = 15.75 \text{ kHz}$ ,  $78\% \text{ AM}$ ,  $84 \text{ dB}\mu\text{V}$ .

Monitor video output-2 detection output using a spectrum analyzer.

Measure the ratios of the  $15.75 \text{ kHz}$  and  $58.75 \text{ MHz}$  components.

## (Note 10) Harmonic rejection ratio

Measure as in Note 9, above, and calculate the secondary harmonic level ( $117.5 \text{ MHz}$  component) at video output-2.

## (Note 11) Intermodulation

PIF input : Input the following composite signals to the PIF input.

(1) SG 1 :  $58.75 \text{ MHz}$  (P)  $84 \text{ dB}\mu\text{V}$

(2) SG 2 :  $54.25 \text{ MHz}$  (S)  $74 \text{ dB}\mu\text{V}$

(3) SG 2 :  $55.17 \text{ MHz}$  (C)  $74 \text{ dB}\mu\text{V}$

Monitor the video output-2 detection output waveform. Apply external voltage to the 2nd AGC terminal so that the waveform's lowest level matches the sync. Tip level.

Using a spectrum analyzer, measure the difference between the level of the chroma signal component of the video output-2 and the  $920 \text{ kHz}$  signal component.

## (Note 12) Differential gain, Differential phase

PIF input : f = 58.75 MHz, standard television signal (V/S = 10 : 4 ramp waveform, 87.5% AM, 84 dB $\mu$ V).

Measure the differential gain and differential phase with a vector scope.

## (Note 13) AFT sensitivity

PIF input : f = 58.75 MHz, 84 dB $\mu$ V, CW.

Input the above signal and adjust the AFT coil so that the AFT output pin voltage is 2.5 ± 0.3 V.

Measure the output voltage differential ( $\Delta V$ ) of the AFT output pin when the frequency is raised by 20 kHz. Then, calculate the ratio using the following formula.

$$\frac{\Delta f}{\Delta V} = \frac{20}{\Delta V} [\text{kHz/V}]$$

## (Note 14) AFT mute voltage

PIF Input : No input. 2nd AGC terminal : GND. AFT coil terminal : GND.

Measure the AFT output terminal voltage.

## (Note 15) AFT minimum output voltage

PIF input : f = 59.25 MHz, 84 dB $\mu$ V, CW.

Measure the AFT output pin voltage.

## (Note 16) AFT maximum output voltage

PIF Input : f = 58.25 MHz, 84 dB $\mu$ V, CW.

Measure the AFT output terminal voltage.

## (Note 17) RF AGC maximum output

PIF input : No input.

Set the RF AGC delay adjustment to the V<sub>CC</sub> side.

Measure the RF AGC output terminal voltage.

## (Note 18) RF AGC output current

PIF input : No input.

Turn switch 1 on. Measure the output current.

## (Note 19) Detection output power supply dependence

PIF input : f = 58.75 MHz, standard television signal (V/S = 10 : 4 ramp waveform), 87.5% AM, 84 dB $\mu$ V.

Measure the video detection output.

Next, measure the video detection output when the power supply voltage is ± 1 V of the typ. level. Calculate the ratio.

## (Note 20) Input impedance

Connect an impedance analyzer to the PIF input terminal. Measure the input resistance and the input capacitance.

< QIF circuit >

(Note 21) Input sensitivity

QIF input : Input the following composite signals to the QIF input.

- (1)  $f = 58.75 \text{ MHz } 84 \text{ dB}\mu\text{V}$ , CW.
- (2)  $f = 54.25 \text{ MHz } 74 \text{ dB}\mu\text{V}$ , CW.

Gradually reduce the composite signal level. Measure the input level when the 4.5 MHz detection output at the QIF output terminal will be 1/2.

(Note 22) Maximum input level

QIF input : Input the following composite signals to the QIF input.

- (1)  $f = 58.75 \text{ MHz } 84 \text{ dB}\mu\text{V}$ , CW.
- (2)  $f = 54.25 \text{ MHz } 74 \text{ dB}\mu\text{V}$ , CW.

Gradually raise the composite signal level. Measure the input level when the 4.5 MHz detection output at the QIF output terminal changes by  $\pm 0.5 \text{ dB}$ .

(Note 23) Gain reduction

$$\text{GR} = (\text{Maximum input} - \text{Input sensitivity}) [\text{dB}]$$

(Note 24) 4.5 MHz output

QIF input : Input the following composite signals to the QIF input.

- (1)  $f = 58.75 \text{ MHz } 84 \text{ dB}\mu\text{V}$ , CW.
- (2)  $f = 54.25 \text{ MHz } 74 \text{ dB}\mu\text{V}$ , CW.

Measure output amplitude at the QIF output terminal. Convert the result to  $\text{dB}\mu\text{V}$ .

(Note 25) Carrier wave rejection ratio

As in Note 9, measure the QIF output terminal carrier wave rejection ratio.

(Note 26) Harmonic rejection ratio

As in Note 10, measure the QIF output terminal secondary harmonic rejection ratio.

(Note 27) Detection output power supply dependence

QIF input : Input the following composite signals to the QIF input.

- (1)  $f = 58.75 \text{ MHz } 84 \text{ dB}\mu\text{V}$ , CW.
- (2)  $f = 54.25 \text{ MHz } 74 \text{ dB}\mu\text{V}$ , CW.

Measure the 4.5 MHz detection output.

Next, measure the detection output when the power supply voltage is  $\pm 1 \text{ V}$  of the typ. level. Calculate the ratio.

(Note 28) Input impedance

Connect an impedance analyzer to the QIF input terminal. Measure the input resistance and the input capacitance.

< SIF circuit >

(Note 29) Limiting sensitivity

Limiter input : f = 4.5 MHz, fm = 400 Hz, 25 kHz/devi, 100 dB $\mu$ V.

Gradually reduce the input signal. Measure the input level when the sound detection output of the sound output terminal will be -3 dB.

(Note 30) Sound detection output

Limiter input : f = 4.5 MHz, fm = 400 Hz, 25 kHz/devi, 100 dB $\mu$ V.

Measure the sound detection output of the sound output terminal.

(Note 31) Sound S/N ratio

Limiter input : f = 4.5 MHz, fm = 400 Hz, 25 kHz/devi, 100 dB $\mu$ V.

Measure the sound detection output level of the sound output pin.

Then, measure the sound detection output level without modulation.

$$S/N = 20 \log \left[ \frac{\text{Value with modulation (mV}_{\text{rms}})}{\text{Value without modulation (mV}_{\text{rms}})} \right] [\text{dB}]$$

(Note 32) -3 dB bandwidth

Limiter input : f = 4.5 MHz, fm = 400 Hz, 25 kHz/devi, 100 dB $\mu$ V.

(1) fAFh : Gradually raise the frequency. Measure the input frequency when the sound detection output of the sound output terminal will be -3 dB.

(2) fAFI : Gradually lower the frequency. Measure the input frequency when the sound detection output of the sound output terminal will be -3 dB.

$$-3 \text{ dB bandwidth} = (fAFh - fAFI) [\text{kHz}]$$

(Note 33) AM suppression ratio

Limiter input : f = 4.5 MHz, 100 dB $\mu$ V.

Measure the sound detection output level of the sound output terminal when the above signals are modulated as follows. Calculate the ratio.

(1) AM modulation : fm = 400 Hz, 30%

(2) FM modulation : fm = 400 Hz, 25 kHz/devi

$$AMR = 20 \log \left[ \frac{\text{With FM modulation (mV}_{\text{rms}})}{\text{With AM modulation (mV}_{\text{rms}})} \right] [\text{dB}]$$

## (Note 34) Distortion ratio

Limiter input :  $f = 4.5 \text{ MHz}$ ,  $\text{fm} = 400 \text{ Hz}$ ,  $25 \text{ kHz}/\text{devi}$ ,  $100 \text{ dB}\mu\text{V}$ .

Measure the sound output terminal distortion ratio.

## (Note 35) Detection output power supply dependence

Limiter input :  $f = 4.5 \text{ MHz}$ ,  $\text{fm} = 400 \text{ Hz}$ ,  $25 \text{ kHz}/\text{devi}$ ,  $100 \text{ dB}\mu\text{V}$ .

Measure the sound detection output level of the sound output terminal.

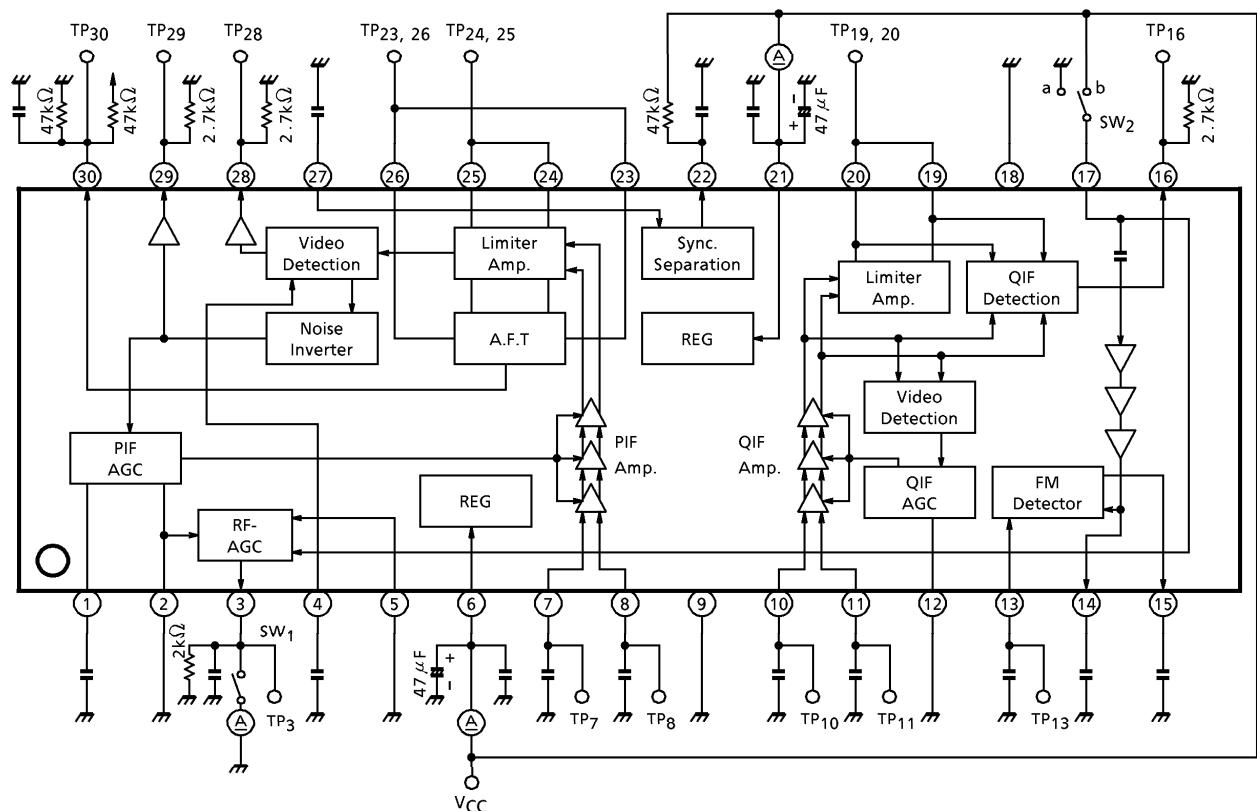

Next, measure the sound detection output when the power supply voltage is  $\pm 1 \text{ V}$  of the typ. level. Calculate the ratio.

## (Note 36) Input impedance

Connect an impedance analyzer to the limiter input terminal. Measure the input resistance and the input capacitance.

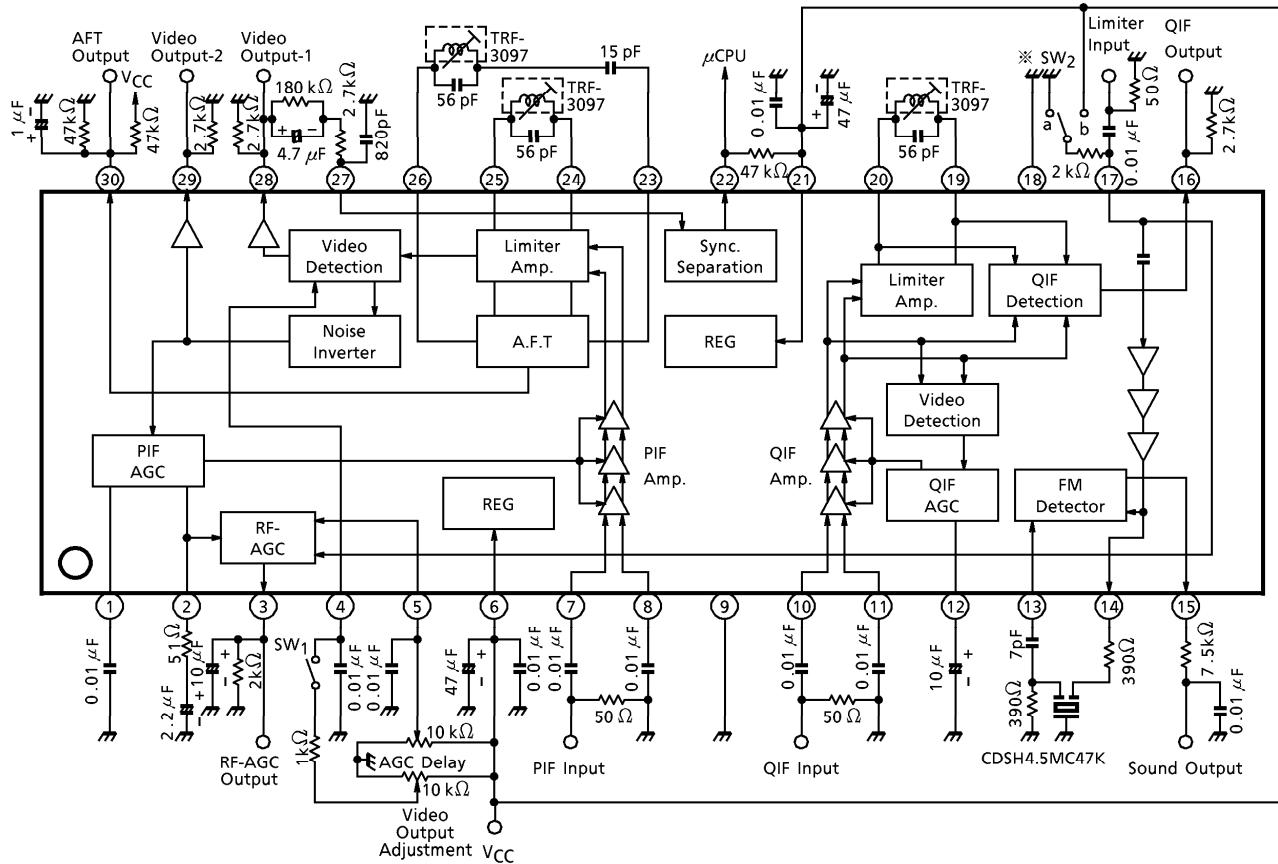

### TEST CIRCUIT 1

DC characteristics

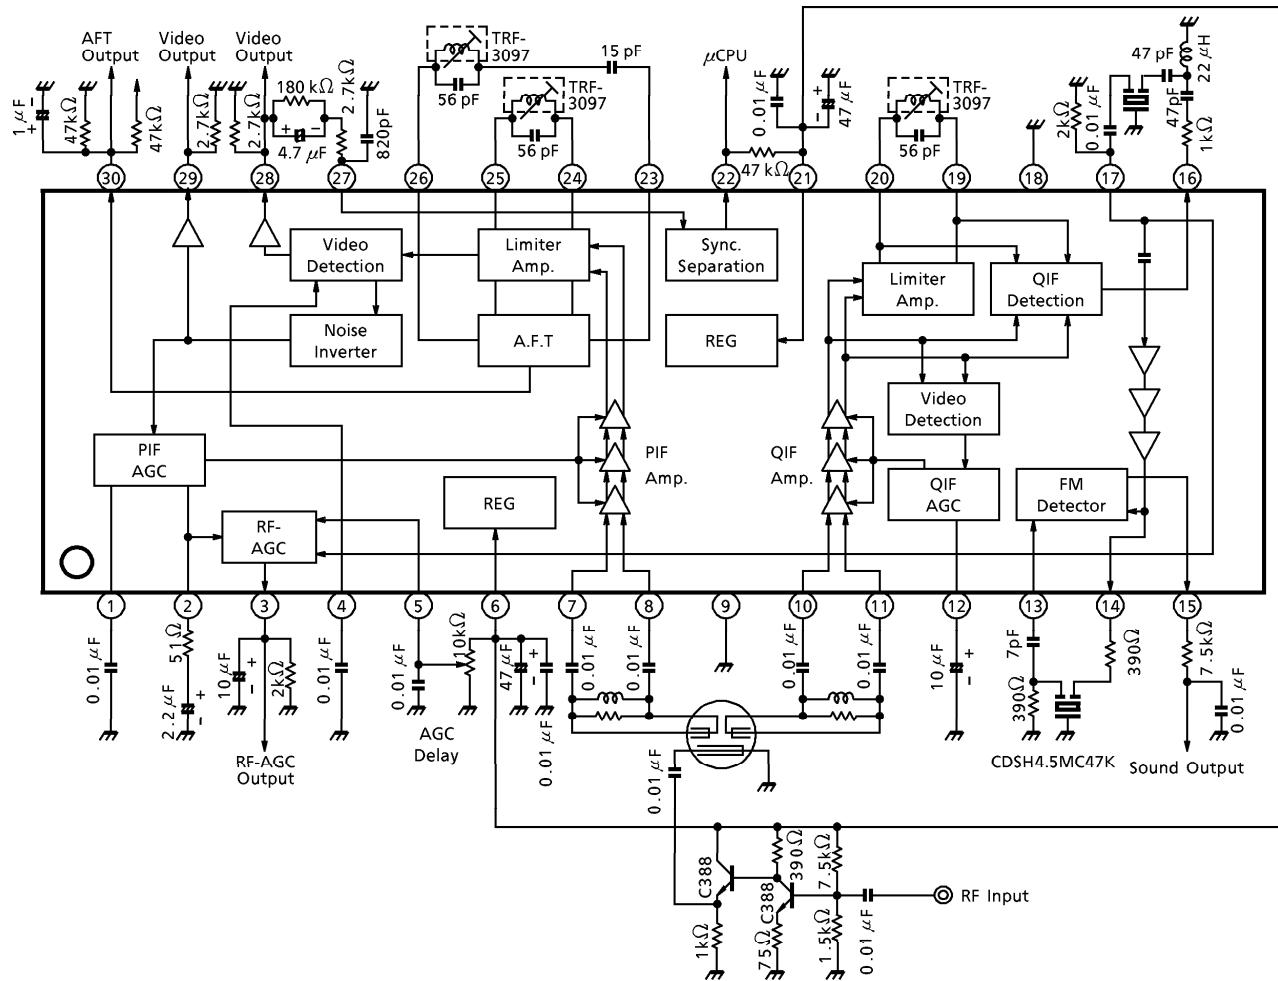

Unless otherwise specified, all capacitors are  $0.01 \mu\text{F}$ .

**TEST CIRCUIT 2**  
AC characteristics

(Note) SW2  
a : Reverse RF AGC  
b : Forward RF AGC

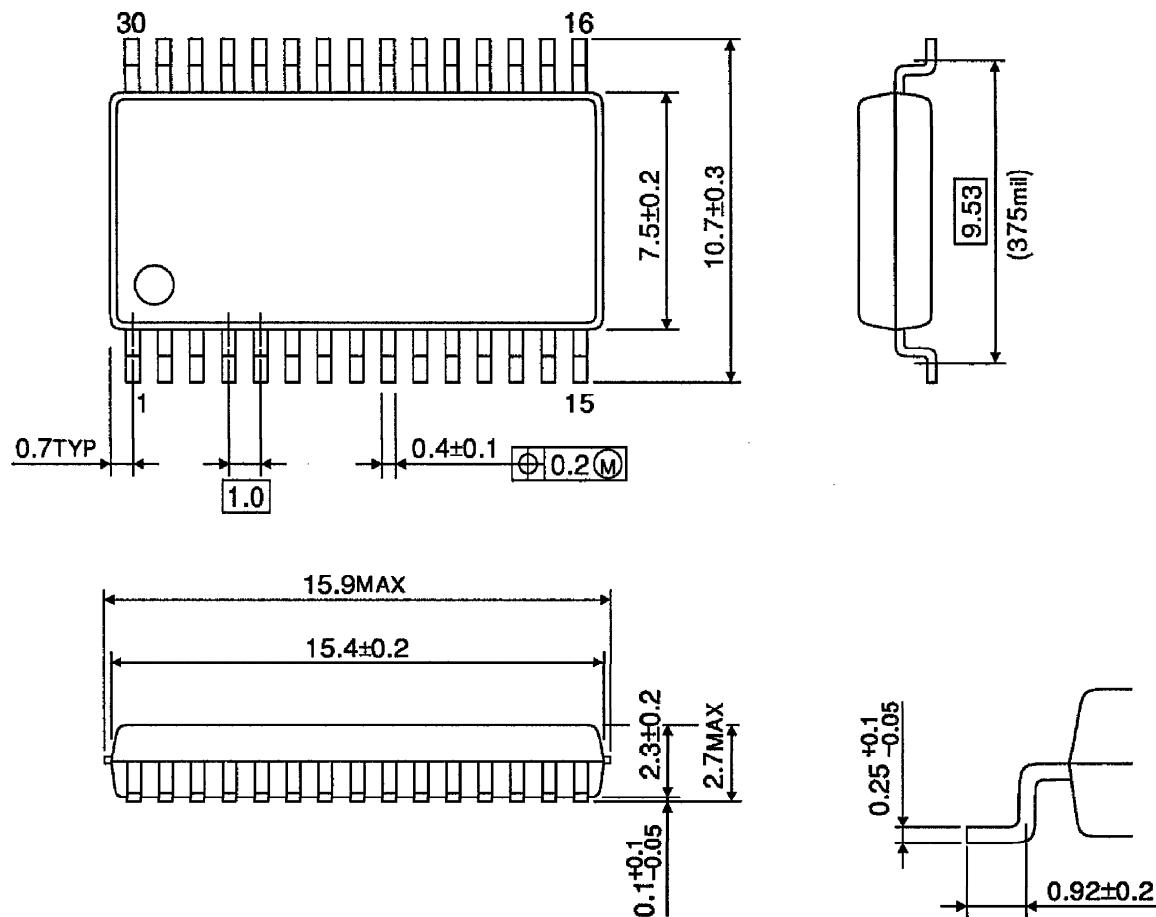

## EXAMPLE OF APPLICATION CIRCUIT (Reverse RF AGC)

## OUTLINE DRAWING

SSOP30-P-375-1.00

Unit : mm

Weight : 0.63 g (Typ.)
