OCTAL BUS BUFFER

TC74VHCT540AF / AFW / AFT INVERTED, 3 - STATE OUTPUTS

TC74VHCT541AF / AFW / AFT NON - INVERTED, 3 - STATE OUTPUTS

(Note) The JEDEC SOP (FW) is not available in Japan.

The TC74VHCT540A and 541A are advanced high speed CMOS OCTAL BUS BUFFERS fabricated with silicon gate C²MOS technology. They achieve the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation. The TC74VHCT540A is an inverting type and, the TC74VHCT541A is a non-inverting type. When either $\bar{G}1$ or $\bar{G}2$ are high, the terminal outputs are in the high-impedance state. The input voltage are compatible with TTL output voltage. These devices may be used as a level converter for interfacing 3.3V to 5V system. Input protection and output circuit ensure that 0 to 5.5V can be applied to the input and output*1 pins without regard to the supply voltage. These structure prevents device destruction due to mismatched supply and input / output voltages such as battery back up, hot board insertion, etc.

*1: output in off-state
