(Dot Matrix Liquid Crystal Graphic Display Column Driver)

T-52-13-07

Description

HD61104, HD61104A is a column (segment) driver for large-area dot matrix liquid crystal graphic display systems.

Features

- Display duty cycle: 1/64–1/200
- Internal liquid crystal display driver: 80 drivers
- 4-bit bus, bidirectional shift data transfer
- Cascade connection with enable format
- Data transfer rate: 3.5 MHz
- Power supply for logic circuit: 5 V $\pm$ 10%
- Power supply for LCD drive circuits :
10 to 26 V (HD61104)
10 to 28 V (HD61104A)
- Standby function
- CMOS process
- 100-pin flat plastic package

HD61105, HD61105A — T-52-13-07

(Dot Matrix Liquid Crystal Graphic Display Common Driver)

Description

The HD61105, HD61105A is a common signal driver for dot matrix liquid crystal graphic display systems. It provides 80 driver output lines and the impedance is low enough to drive a large screen.

As the HD61105, HD61105A is produced in a CMOS process, it is fit for use in portable battery drive equipments utilizing the liquid crystal display's low power consumption.

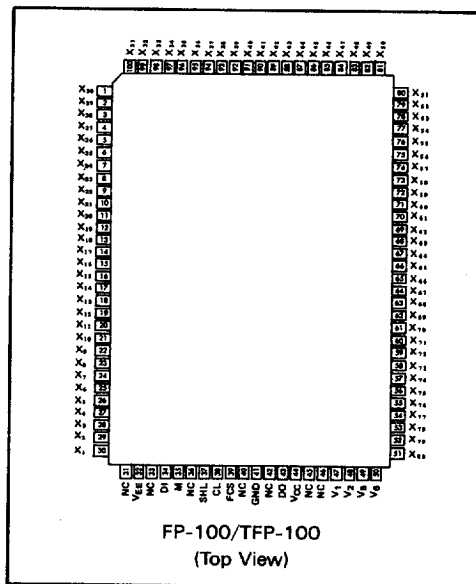

Features

- Dot matrix liquid crystal graphic display common driver with low impedance
- Internal liquid crystal display driver circuit: 80 circuits
- Display duty ratio factor: 1/64—1/200
- Internal 80-bit shift register
- Power supply for logic circuit: $5 \pm 10\%$
- Power supply for LCD drive circuits:
—10 to 26 V (HD61105)
—10 to 28 V (HD61105A)
- CMOS process
- 100-pin plastic QFP (FP-100)

Block Functions**Bidirectional Shift Register**

This is a 80-bit bidirectional register. The data from the DI terminal is shifted by the shift clock CL. The output terminal DO outputs the last shifted data. In case of serial cascade connection, terminal DO functions as the data input to the next LSI. Terminal SHL selects the data shift direction (table 1), and the terminal FCS selects the shift clock phase (table 2).

Liquid Crystal Display Driver Circuit

The combination of the data from the shift register with M signal allows one of the four liquid crystal display driver levels V1, V2, V5, and V6 to be transferred to the output terminals (table 3).

1/200 duty ratio

Note: 1. The values of R1 and R2 vary with the LCD panel used.
 When bias factor is 1/15, the values of R1 and R2 should satisfy $\frac{R1}{4R1+R2} = \frac{1}{15}$
 For example, R1 = 3 KΩ, R2 = 33 KΩ
