Functional Description

The 74VCX16839 consists of twenty selectable non-inverting buffers or registers with word wide controls. Mode functionality is selected through operation of the CP and REGE pin as shown by the truth table. When REGE is held at a logic "1" the device operates as a 20-bit register. Data is transferred from I_n to O_n on the rising edge of the CP pin. When the REGE pin is held at a logic "0" the device operates in a flow through mode and data propagates directly from the I_n to the O_n outputs. All outputs can be 3-stated by holding the \overline{OE} pin at a logic "1."

| $V_{CC} = 3.0V$ to 3.6V | ±24 mA |
| $V_{CC} = 2.3V$ to 2.7V | ±18 mA |
| V _{CC} = 1.65V to 2.3V | ±6 mA |
| Free Air Operating Temperature (T _A) | $-40^{\circ}C$ to $+85^{\circ}C$ |
| Minimum Input Edge Rate ($\Delta t/\Delta V$) | |
| $V_{\text{IN}} = 0.8 \text{V}$ to 2.0V, $V_{\text{CC}} = 3.0 \text{V}$ | 10 ns/V |
| Note 2: The Absolute Maximum Ratings are those | values beyond which |

74VCX16839

Note 2: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 3: I_{O} Absolute Maximum Rating must be observed.

Note 4: Floating or unused inputs must be held HIGH or LOW.

DC Electrical Characteristics (2.7V $< V_{CC} \leq 3.6V)$
