

Agilent ATF-501P8 High Linearity Enhancement Mode^[1] Pseudomorphic HEMT in 2x2 mm² LPCC^[3] Package

Data Sheet

Description

Agilent Technologies's ATF-501P8 is a single-voltage high linearity, low noise E-pHEMT housed in an 8-lead JEDEC-standard leadless plastic chip carrier (LPCC^[3]) package. The device is ideal as a medium-power amplifier. Its operating frequency range is from 400 MHz to 3.9 GHz.

The thermally efficient package measures only 2mm x 2mm x 0.75mm. Its backside metalization provides excellent thermal dissipation as well as visual evidence of solder reflow. The device has a Point MTTF of over 300 years at a mounting temperature of +85°C. All devices are 100% RF & DC tested.

Notes:

1. Enhancement mode technology employs a single positive V_{gs} , eliminating the need of negative gate voltage associated with conventional depletion mode devices.
2. Refer to reliability datasheet for detailed MTTF data.
3. Conforms to JEDEC reference outline M0229 for DRP-N.
4. Linearity Figure of Merit (LFOM) is essentially OIP3 divided by DC bias power.

Figure 64. MSG/MAG & $|S_{21}|^2$ vs. Frequency at 5.5V 360mA.

Notes:

1. S parameter is measured on a microstrip line made on 0.025 inch thick alumina carrier. The input reference plane is at the end of the gate lead. The output reference plane is at the end of the drain lead.
