**DUAL D-TYPE FLIP FLOP WITH PRESET AND CLEAR**

(Note) The JEDEC SOP (FN) is not available in Japan.

The TC74ACT74 is an advanced high speed CMOS D-FLIP FLOP fabricated with silicon gate and double-layer metal wiring C<sup>2</sup>MOS technology.

It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

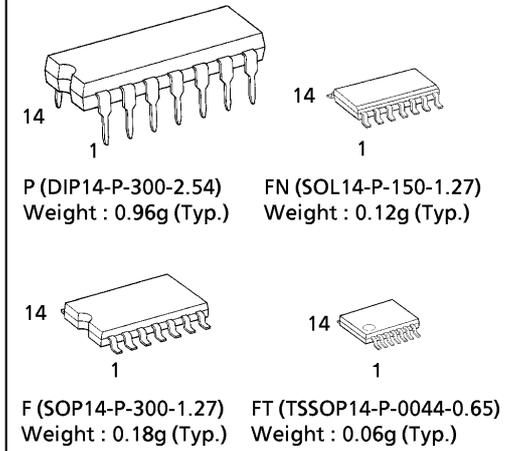

This device may be used as a level converter for interfacing TTL or NMOS to High Speed CMOS. The inputs are compatible with TTL, NMOS and CMOS output voltage levels.

The signal level applied to the D INPUT is transferred to Q OUTPUT during the positive going transition of the CK pulse.

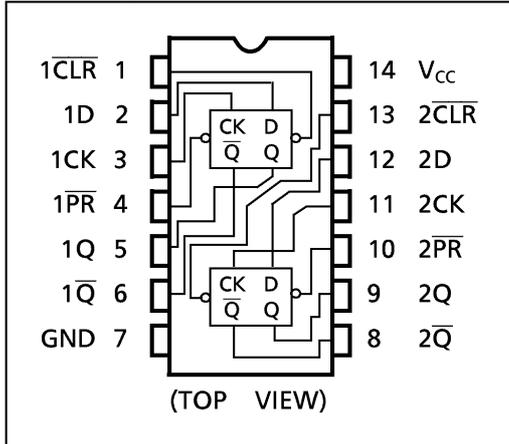

CLR and  $\overline{PR}$  are independent of the CK and are accomplished by setting the appropriate input to an "L" level. All inputs are equipped with protection circuits against static discharge or transient excess voltage.

**FEATURES :**
