

Active RF Splitter

ADA4302-4

FUNCTIONAL BLOCK DIAGRAM

Single 5 V supply 54 MHz to 865 MHz CATV operating range 4.6 dB of gain per output channel 4.4 dB noise figure 25 dB isolation between output channels -16 dB input return loss CSO of -89 dBc (135 channels, 15 dBmV per tone) CTB of -81 dBc (135 channels, 15 dBmV per tone) 1.3 GHz, -3 dB bandwidth

APPLICATIONS

FEATURES

Cable set-top boxes Home gateways CATV distribution systems Cable splitter modules

GENERAL DESCRIPTION

The ADA4302-4 is used as an active element in applications where a lossless signal split is required. Typical applications include multituner cable set-top boxes, cable splitter modules, multituner televisions, and home gateways where traditional solutions have consisted of discrete passive splitters followed by separate fixed gain amplifiers. The ADA4302-4 is a low cost alternative solution that simplifies designs and improves system performance by integrating a signal splitter element and gain element into a single IC solution.

The ADA4302-4 features four differential outputs. The differential architecture allows systems designed with the ADA4302-4 to maintain excellent linearity throughout the CATV band. The ADA4302-4 can also be configured for applications that require fewer than four outputs. Outputs may be configured independently from one another.

For more information about the ADA4302-4, contact Analog Devices, Inc. via email at high_current_drivers.com@analog.com.
