

FDC637AN

Single N-Channel, 2.5V Specified PowerTrench™ MOSFET

General Description

This N-Channel 2.5V specified MOSFET is produced using Fairchild Semiconductor's advanced PowerTrench process that has been especially tailored to minimize on-state resistance and yet maintain low gate charge for superior switching performance.

These devices have been designed to offer exceptional power dissipation in a very small footprint compared with bigger SO-8 and TSSOP-8 packages.

Applications

- DC/DC converter
- Load switch
- Battery Protection

Features

- 6.2 A, 20 V. $R_{DS(on)} = 0.024 \Omega @ V_{GS} = 4.5 V$
 $R_{DS(on)} = 0.032 \Omega @ V_{GS} = 2.5 V$
- Fast switching speed.
- Low gate charge (10.5nC typical).
- High performance trench technology for extremely low $R_{DS(on)}$.
- SuperSOT™-6 package: small footprint (72% smaller than standard SO-8); low profile (1mm thick).

SuperSOT™-6 Tape and Reel Data and Package Dimensions

SSOT-6 Packaging Configuration: Figure 1.0

Packaging Description:

SSOT-6 parts are shipped in tape. The carrier tape is made from a dissipative (carbon filled) polycarbonate resin. The cover tape is a multilayer film (Heat Activated Adhesive in nature) primarily composed of polyester film, adhesive layer, sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 3,000 units per 7" or 177cm diameter reel. The reels are dark blue in color and is made of polystyrene plastic (anti-static coated). Other option comes in 10,000 units per 13" or 330cm diameter reel. This and some other options are described in the Packaging Information table.

These full reels are individually barcode labeled and placed inside a pizza box (illustrated in figure 1.0) made of recyclable corrugated brown paper with a Fairchild logo printing. One pizza box contains three reels maximum. And these pizza boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.
