# LC6527C/H, 6528C/H

CMOS LSI

SINGLE-CHIP 4-BIT MICROCOMPUTERS FOR SMALL-SCALE CONTROL-ORIENTED APPLICATIONS

### General Description

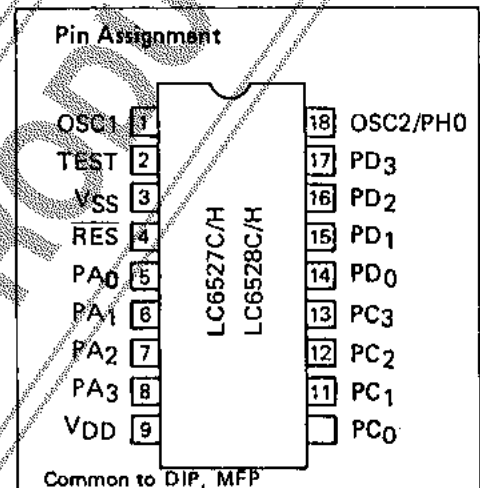

The LC6527C/H, LC6528C/H are single-chip 4-bit microcomputers fabricated using CMOS process technology and are suited for use in small-scale control-oriented applications. The LC6527C/H, LC6528C/H are placed in 18-pin plastic packages.

The LC6527 and LC6528 differ from each other as follows:

Type No.	ROM Capacity	RAM Capacity
LC6527C/H	1024 bytes	64 words
LC6528C/H	512 bytes	32 words

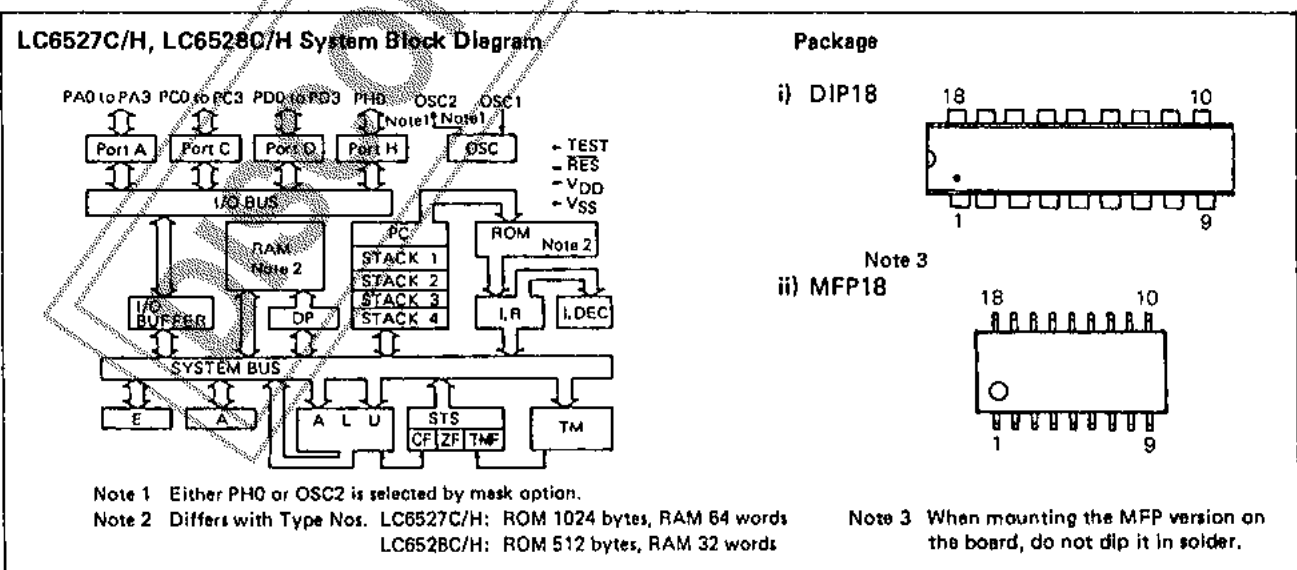

The H version (high speed version) and C version (wide operating voltage version) differ from each other as follows:

Type No.	Cycle Time	Operating Voltage
LC6527H LC6528H	0.92 to 20μsec	4.5 to 6.0V
LC6527C	6.0 to 20μsec	3.0 to 6.0V
LC6528C	2.77 ~ 20μsec	4.0 to 6.0V

### Features

- High speed operation 0.92μsec. cycle time H version (LC6527H, LC6528H)
- Wide operating voltage range 3.0 to 6.0V C version (at 6.0μsec. cycle time)
- Low power dissipation mode Standby function provided by HALT instruction execution
- High current drive, LED drivable IOL: 10mA typ., 20mA max.
- High breakdown voltage input/output 15V max.
- 8-bit programmable timer With 4-bit prescaler, overflow flag
- 4-level subroutine nesting
- Wide clock frequency range 200kHz to 4.33MHz (with 1/1, 1/3, 1/4 clock prescaler option)
- 18-pin plastic package (DIP, MFP)

Specifications and information herein are subject to change without notice.

**SANYO Electric Co., Ltd. Semiconductor Overseas Marketing Div.**  
 Natsume Bldg., 18-6, 2-chome, Yushima Bunkyo-ku, TOKYO 113 JAPAN

**Development Support**

The following are available to support the LC6527, LC6528 program development.

(1) User's Manual

"LC6527, LC6528 User's Manual" No. E24.

(Note) Do not use "LC6523 Series User's Manual" No. E16.

(2) Development Tool Manual

For the EVA-410 system, refer to the description of Development Support Tools in "LC6527, LC6528 User's Manual". For the EVA-800 system, refer to "EVA800-LC6527/28 Development Tool Manual"

(3) Development Tools

1) For program development (EVA-410 system)

i. (SDS-410) system

ii. CP/M80 base cross assembler: (LC6527.COM), (LC6528.COM)

MS-DOS base cross assembler: (LC6527C.COM), (LC6527H.COM), (LC6528C.COM), (LC6528H.COM)

iii. Evaluation kit (EVA-410C)

iv. Evaluation kit target board (EVA-TB6523C/26C/27C/28C), evaluation chip (LC6596)

2) For program evaluation

i. Piggyback (LC65PG23/26)

ii. Socket for conversion of number of piggyback pins (23T27)

Note. For notes for program evaluation, do not fail to refer to "4-3. Notes on Evaluation" in "LC6527, LC6528 User's Manual".

Fig. 1 Evaluation Kit Target Board (EVA-TB6523C/26C/27C/28C)

Fig. 2 For Program Evaluation

- 3) For program development (EVA-800 system)
  - i. (IBM PC/XT, IBM PC-AT compatible Sanyo MS-DOS machine) system and cross assembler
  - ii. Cross assembler ..... MS-DOS base cross assembler: (LC6527C. COM, LC6527H. COM, LC6528C. COM, LC6528H. COM)
  - iii. Evaluation chip: LC6596
  - iv. Emulator : EVA-800 control board and evaluation chip board (EVA800-TB6527/28)

**Appearance of Development Support System**

(Note 1) IBM PC/XT, IBM PC-AT: Products of IBM Corporation  
 MS-DOS: Trademark of Microsoft Corporation

(Note 2) The EVA-800 is a general term for emulator. A suffix (A, B ...) is added at the end of EVA-800 as the EVA-800 is improved to be a newer version. Do not use the EVA-800 with no suffix added.

## Summary of LC6527C, LC6528C Specifications

Item		LC6527C	LC6528C	
Number of basic instructions		51	51	
Instruction execution time (1-word instruction) $\mu\text{sec}$		2.77 ( $V_{DD}=4$ to 6V) 6.0 ( $V_{DD}=3$ to 6V)	2.77 ( $V_{DD}=4$ to 6V) 6.0 ( $V_{DD}=3$ to 6V)	
Clock frequency kHz (External drive mode)	$V_{DD}$ 4 to 6V	800 to 4330 (1/4 prescaler) 600 to 4330 (1/3 prescaler) 200 to 1444 (1/1 prescaler)	800 to 4330 (1/4 prescaler) 600 to 4330 (1/3 prescaler) 200 to 1444 (1/1 prescaler)	
	$V_{DD}$ 3 to 6V	800 to 2667 (1/4 prescaler) 600 to 2000 (1/3 prescaler) 200 to 667 (1/1 prescaler)	800 to 2667 (1/4 prescaler) 600 to 2000 (1/3 prescaler) 200 to 667 (1/1 prescaler)	
Memory capacity	ROM (x 8 bits)	1024	512	
	RAM (x 4 bits)	64	32	
Input/output ports 13 pins	A C D	Input	4 bits x 3	4 bits x 3
		Output	4 bits x 3	4 bits x 3
	H	Input	1 bit x 1	1 bit x 1
		Output	1 bit x 1	1 bit x 1
Timer		4-bit prescaler + 8-bit timer	4-bit prescaler + 8-bit timer	
Subroutine nesting		4 levels	4 levels	
Clock generator		External R, C External ceramic resonator 400kHz, 800kHz, 1MHz, 4MHz	External R, C External ceramic resonator 400kHz, 800kHz, 1MHz, 4MHz	
Port output characteristics	Output current	10mA typ., 20mA max., ports A,C,D,H	10mA typ., 20mA max., ports A,C,D,H	
	Withstand voltage	15V (except output with pull-up resistance)	15V (except output with pull-up resistance)	
Supply voltage		3 to 6V	3 to 6V	
Package		18-pin DIP, 18-pin MFP	18-pin DIP, 18-pin MFP	
Power dissipation (except port)		2.5mW (typ.) at 400kHz 12.5mW (typ.) at 4MHz	2.5mW (typ.) at 400kHz 12.5mW (typ.) at 4MHz	

Summary of LC6527H, LC6528H Specifications

Item		LC6527H	LC6528H
Number of basic instructions		51	51
Instruction execution time (1-word instruction) $\mu\text{sec}$		0.92 ( $V_{DD}=4.5$ to $6V$ )	0.92 ( $V_{DD}=4.5$ to $6V$ )
Clock frequency kHz (External drive mode)		200 to 4330 (1/1 prescaler)	200 to 4330 (1/1 prescaler)
Memory capacity	ROM (x 8 bits)	1024	512
	RAM (x 4 bits)	64	32
Input/output ports 13 pins	A C D	Input	4 bits x 3
		Output	4 bits x 3
	H	Input	1 bit x 1
		Output	1 bit x 1
Timer		4-bit prescaler + 8-bit timer	4-bit prescaler + 8-bit timer
Subroutine nesting		4 levels	4 levels
Clock generator		External ceramic resonator 4MHz	External ceramic resonator 4MHz
Port output characteristics	Output current	10mA typ., 20mA max., ports A,C,D,H	10mA typ., 20mA max., ports A,C,D,H
	Withstand voltage	15V (except output with pull-up resistance)	15V (except output with pull-up resistance)
Supply voltage		4.5 to 6V	4.5 to 6V
Package		18-pin DIP, 18-pin MFP	18-pin DIP, 18-pin MFP
Power dissipation (except port)		20mW (typ.) at 4MHz	20mW (typ.) at 4MHz

Selection Guide to Oscillator, Predivider Option

Classification for Selection			Frequency Range		Option		Remarks	
C/H version	VDD range	Cycle time	Clock frequency	Cycle time	OSC mode	Frequency division		
C version	3 to 6V	6 to 20 $\mu$ s	200 to 667kHz	6 to 20 $\mu$ s	1-pin external clock	1/1		
			600 to 2000kHz			1/3		
			800 to 2667kHz			1/4		
			Typ. 400kHz	Typ. 10 $\mu$ s	2-pin RC OSC	1/1		Possible to apply external clock
			400kHz $\pm$ 4%	10 $\mu$ s $\pm$ 4%	2-pin ceramic resonator OSC	1/1		Impossible to apply external clock Unusable with 1/3, 1/4 predivider
	4 to 6V	2.77 to 20 $\mu$ s	200 to 1444kHz	2.77 to 20 $\mu$ s	1-pin external clock	1/1		
			600 to 4330kHz	$\mu$ s		1/3		
			800 to 4330kHz	3.70 to 20 $\mu$ s		1/4		
			Typ. 650kHz	Typ. 6.2 $\mu$ s	1-pin C OSC	1/1	Possible to apply external clock	
			Typ. 850kHz	Typ. 4.7 $\mu$ s	2-pin RC OSC	1/1		
800kHz $\pm$ 4%			5 $\mu$ s	2-pin ceramic resonator OSC	1/1	Impossible to apply external clock		
			15 $\mu$ s		1/3			
			20 $\mu$ s		1/4			
			4 $\mu$ s		1/1			
			1MHz $\pm$ 4%		12 $\mu$ s		1/3	
	16 $\mu$ s	1/4						
4MHz $\pm$ 4%	3 $\mu$ s	1/3	Unusable with 1/1 pre-divider in 4MHz ceramic resonator OSC mode					
	4 $\mu$ s	1/4						
H version	4.5 to 6.0V	0.92 to 20 $\mu$ s	200 to 4330kHz	0.92 to 20 $\mu$ s	1-pin external clock	1/1	Impossible to apply external clock	
			4MHz $\pm$ 4%	1 $\mu$ s	2-pin ceramic resonator OSC	1/1		

## Pin Description

Pin Name	Pins	I/O	Function	Option	When in the Reset Mode
VDD	1	—	Power supply. Normally connected to +5V.	—	—
VSS	1	—	Power supply. Connected to 0V.	—	—
OSC1	1	Input	<ul style="list-style-type: none"> <li>Pin for externally connecting C, RC, ceramic resonator for system clock generation.</li> <li>For 1-pin external clock input, 1-pin C OSC, the PH0/OSC2 pin is used as I/O port PH0.</li> <li>For 2-pin RC OSC, 2-pin ceramic resonator OSC, the PH0/OSC2 pin is used as OSC pin OSC2.</li> </ul>	<ul style="list-style-type: none"> <li>① 1-pin external clock input</li> <li>② 1-pin C OSC</li> <li>③ 2-pin RC OSC</li> <li>④ 2-pin ceramic resonator OSC</li> <li>⑤ Predivider option               <ul style="list-style-type: none"> <li>1. PA0 PA1 PA2 PA3	4	Input/output	<ul style="list-style-type: none"> <li>I/O port A0 to 3.</li> <li>4-bit input (IP instruction)</li> <li>4-bit output (OP instruction)</li> <li>Single-bit decision (BP, BNP instruction)</li> <li>Single-bit set/reset (SPB, RPB, instruction)</li> <li>Standby is controlled by PA3.</li> <li>The PA3 pin must be free from chattering during the HALT instruction execution cycle.</li> </ul>	<ul style="list-style-type: none"> <li>① Open drain type output</li> <li>② With pull-up resistor</li> <li>①, ② : Specified bit by bit</li> </ul>	"H" output (Output Nch transistor: OFF)
PC0 PC1 PC2 PC3	4	Input/output	<ul style="list-style-type: none"> <li>I/O port C0 to 3.</li> <li>Same as for PA0 to 3 (Note)</li> <li>Option permits output at the reset mode to be "H" or "L" (Note)</li> <li>No standby control function is provided.</li> </ul>	<ul style="list-style-type: none"> <li>① Open drain type output</li> <li>② With pull-up resistor</li> <li>③ Output at the reset mode: "H"</li> <li>④ Output at the reset mode: "L"</li> <li>• ①, ② : Specified bit by bit</li> <li>• ③, ④ : Specified in a group of 4 bits.</li> </ul>	"H" output "L" output (Option-selectable)
PD0 PD1 PD2 PD3	4	Input/output	<ul style="list-style-type: none"> <li>I/O port D0 to 3.</li> <li>Same as for PC0 to 3</li> </ul>	Same as for PC0 to 3	Same as for PC0 to 3
PH0/OSC2	1	Input/output	<ul style="list-style-type: none"> <li>I/O port H0</li> <li>Single-bit configuration</li> <li>For 2-pin OSC, this pin is used as the OSC2 pin, providing no function as I/O port.</li> </ul>	<ul style="list-style-type: none"> <li>① Open drain type output</li> <li>② With pull-up resistor</li> <li>③ Selection of PH0 or OSC2</li> </ul>	"H" output (Output Nch transistor: OFF), when this pin is used as I/O port H0.
RES	1	Input	<ul style="list-style-type: none"> <li>System reset input</li> <li>For power-up reset, C is connected externally</li> <li>For reset restart, "L" level is applied for 4 clock cycles or more.</li> </ul>	—	—
TEST	1	Input	<ul style="list-style-type: none"> <li>LSI test pin</li> <li>Normally connected to VSS</li> </ul>	—	—

User Options

1) Oscillator Circuit Option

Option Name	Circuit	Conditions, etc.
1. 1-pin C OSC		The PH0/PSC2 pin is used as port PH0.
2. External clock		The PH0/OSC2 pin is used as port PH0.
3. 2-pin RC OSC		The PH0/OSC2 pin is used as OSC pin OSC2, providing no function as port.
4. 2-pin ceramic resonator OSC		The PH0/OSC2 pin is used as OSC pin OSC2, providing no function as port.

2) Predivider Option

Option Name	Circuit	Conditions, etc.
1. No predivider (1/1)		<ul style="list-style-type: none"> <li>• Applicable to all of 4 OSC options.</li> <li>• The OSC frequency, external clock do not exceed 1444kHz. (LC6527C, 6528C)</li> <li>• The OSC frequency, external clock do not exceed 4330kHz. (LC6527H, 6528H)</li> </ul>
2. 1/3 predivider		<ul style="list-style-type: none"> <li>• Applicable to only 2 options of external clock, ceramic resonator OSC.</li> <li>• The OSC frequency, external clock do not exceed 4330kHz.</li> </ul>
3. 1/4 predivider		<ul style="list-style-type: none"> <li>• Applicable to only 2 options of external clock, ceramic resonator OSC.</li> <li>• The OSC frequency, external clock do not exceed 4330kHz.</li> </ul>

**3) Option of Ports C, D Output Level at the Reset Mode**

For input/output common ports C, D, either of the following two output levels may be selected in a group of 4 bits during reset by option.

Option Name	Conditions, etc.
1. Output at the reset mode: "H"-level	All of 4 bits of ports C, D
2. Output at the reset mode: "L"-level	All of 4 bits of ports C, D

**4) Option of Port Output Configuration**

For each input/output common port, either of the following two output configurations may be selected by option (Bitwise).

Option Name	Circuit	Conditions, etc.
1. Open drain output (OD)		<ul style="list-style-type: none"> <li>Unapplicable to port PH0/OSC2</li> <li>When 2-pin RC OSC or ceramic resonator OSC is selected.</li> </ul>
2. Output with pull-up (PU)		

DISCONTINUED PRODUCT

[LC6527C, 6528C]

1. Absolute Maximum Ratings at Ta=25°C, VSS=0V

				unit
Maximum Supply Voltage	VDDmax	VDD	-0.3 to +7.0	V
Output Voltage	VO	OSC2	-0.3 to VDD+0.3	V
Input Voltage	VI(1)	OSC1(*1)	-0.3 to VDD+0.3	V
	VI(2)	TEST, RES	-0.3 to VDD+0.3	V
Input/Output Voltage	VI0(1)	Port of OD type	-0.3 to +15	V
	VI0(2)	Port of PU type	-0.3 to VDD+0.3	V
		OSC1 for 1-pin C		
Peak Output Current	IOP	I/O port	-2 to +20	mA
Average Output Current	IOA	I/O port	-2 to +20	mA
(Average over the period	ΣIOA(1)	PA0 to 3	-6 to +40	mA
of 100msec.)	ΣIOA(2)	PC0 to 3, PD0 to 3	-14 to +80	mA
		PH0		
Allowable Power Dissipation	Pdmax	DIP version	400	mW
		MFP version *	275	mW
Operating Temperature	Topg		-30 to +70	°C
Storage Temperature	Tstg		-55 to +125	°C

(\*1) When oscillated internally under the oscillating conditions in Fig. 4, up to the oscillation amplitude generated is allowable.

\* When mounting the MFP version on the board, do not dip it in solder.

2. Allowable Operating Conditions at Ta=-30 to +70°C, VSS=0V, VDD=3.0 to 6.0V unless otherwise specified

			min	typ	max	unit
Operating Supply Voltage	VDD	VDD	3.0		6.0	V
Standby Supply Voltage	Vst	RAM, register hold (*2)	1.8		6.0	V
"H"-Level Input Voltage	VIH(1)	Output Nch Tr OFF	I/O port of OD type (except HO)	0.7VDD	+13.5	V
	VIH(2)	Output Nch Tr OFF	I/O port of PU type (except HO)	0.7VDD	VDD	V
	VIH(3)	Output Nch Tr OFF	HO port of OD type	0.8VDD	+13.5	V
	VIH(4)	Output Nch Tr OFF	HO port of PU type	0.8VDD	VDD	V
	VIH(5)		RES	0.8VDD	VDD	V
	VIH(6)	External clock mode	OSC1	0.8VDD	VDD	V
"L"-Level Input Voltage	VIL(1)	Output Nch Tr OFF	Port	VSS	0.3VDD	V
	VIL(2)	Output Nch Tr OFF	Port	VSS	0.25VDD	V
	VIL(3)	External clock mode	OSC1	VSS	0.25VDD	V
	VIL(4)	External clock mode	OSC1	VSS	0.2VDD	V
	VIL(5)	VDD=4.0 to 6.0V	TEST	VSS	0.3VDD	V
	VIL(6)	VDD=3.0 to 4.0V	TEST	VSS	0.25VDD	V
	VIL(7)	VDD=4.0 to 6.0V	RES	VSS	0.25VDD	V
	VIL(8)	VDD=3.0 to 4.0V	RES	VSS	0.2VDD	V

(\*2) Operating supply voltage VDD must be held until the standby mode is entered after the execution of the HALT instruction.

The PA3 pin must be free from chattering during the HALT instruction execution cycle.

3. Electrical Characteristics at Ta=-30 to +70°C, VSS=0V, VDD=3.0 to 6.0V unless otherwise specified

Table 1 Constants Guaranteed for Ceramic Resonator OSC

Fig. 6 Reset Circuit

(Note) When the rise time of the power supply is 0, the reset time becomes 10ms to 100ms at  $C_{RES}=0.1\mu F$ . If the rise time of the power supply is long, the value of  $C_{RES}$  must be increased so that the reset time becomes 10ms or more.

RC Oscillation Characteristic of the LC6527, 6528 (when the 2-pin RC OSC option is selected)

Fig. 7 shows the RC oscillation characteristic of the LC6527; 6528. For the variation range of RC OSC frequency of the LC6527, 6528, the following are guaranteed at the external constants only shown below.

- i)  $V_{DD}=3.0V$  to  $6.0V$ ,  $T_a=-30^{\circ}C$  to  $+70^{\circ}C$   
 External constants     $C_{ext}=270pF$   
                                   $R_{ext}=12kohms$   
                                   $260kHz \leq f_{osc} \leq 645kHz$
- ii)  $V_{DD}=4.0V$  to  $6.0V$ ,  $T_a=-30^{\circ}C$  to  $+70^{\circ}C$   
                                   $C_{ext}=220pF$   
                                   $R_{ext}=5.6kohms$   
                                   $600kHz \leq f_{osc} \leq 1235kHz$

If any other constants than specified above are used, the range of  $R_{ext}=3kohms$  to  $20kohms$ ,  $C_{ext}=150pF$  to  $390pF$  must be observed. (See Fig. 7.)

The oscillation frequency at  $V_{DD}=5.0V$ ,  $T_a=+25^{\circ}C$  must be in the range of  $400kHz$  to  $850kHz$ .

The oscillation frequency at  $V_{DD}=4.0V$  to  $6.0V$ ,  $T_a=-30^{\circ}C$  to  $+70^{\circ}C$  and  $V_{DD}=3.0V$  to  $6.0V$ ,  $T_a=-30^{\circ}C$  to  $+70^{\circ}C$  must be within the operation clock frequency range (Table of OSC, Prescaler Option).

Fig. 7 2-Pin RC Oscillation Frequency Data (Typ.)

[LC6527H, 6528H]

1. Absolute Maximum Ratings at Ta=25°C, VSS=0V

Table 1 Constants Guaranteed for Ceramic Resonator OSC

Fig. 4 Reset Circuit

(Note) When the rise time of the power supply is 0, the reset time becomes 10ms to 100ms at CRES=0.1µF. If the rise time of the power supply is long, the value of CRES must be increased so that the reset time becomes 10ms or more.

Notes for Program Evaluation

- When evaluating the LC6527/28 with the evaluation chip (LC6596, LC65PG23/26), the following must be observed.

Class- ification	Item	Function		Notes for evaluation
		Mass-production chip	Evaluation chip	
Notes for option	2-pin OSC	PH0 and OSC2 share one pin (PH0/OSC2). Either of them is selected exclusively by user option. When 2-pin OSC is selected, PH0/OSC2 pin provides OSC2 and performs no function as PH0 port. Data input to PH0/OSC2 by mistake is always read as "0".	Evaluation chip has PH0 and OSC2 separately. Pin required for option is selected as required. Even when OSC2 pin is selected by option, PH0 circuit is present and functions as complete port PH0.	Since input/output at PH0 on evaluation chip results in difference between evaluation chip operation and mass-production chip operation, input/output at PH0 is prohibited.
	1-pin OSC	When 1-pin C OSC is selected, OSC circuit is formed by connecting catalog guaranteed C to OSC1 pin.	Since no OSC circuit for 1-pin C OSC is contained, 1-pin C OSC is not available.	2-pin RC provides OSC and frequency is adjusted as desired. OSC characteristic differs, but there is no restriction on program (ES, CS must be used to evaluate OSC characteristic in detail).
	OSC predivider	3 selections (1/1, 1/3, 1/4) by option.	3 selections (1/1, 1/3, 1/4) available by 2 pins of DIV pin, 3OR4 pin.	DIV pin, 3OR4 pin must be set according to option specified for mass-production chip.
	Ports C, D output level at reset mode	Ports C, D can be brought to "H" or "L" in a group of 4 bits.	Port C and port D can be brought to "H" and "L" by CHL pin and DHL pin respectively.	CHL pin and DHL pin must be set according to option specified for mass-production chip.
	Port output configuration PU/OD	PU or OD can be selected bitwise.	Only OD without PU.	[LC6596-applied evaluation] External resistor (15kohms) on evaluation board must be connected to necessary port. {Piggyback-applied evaluation} Resistor must be connected to necessary port on application board.
	PU resistor configuration	PU resistor brought to Hi-Z (Pch Tr to turn OFF) at "L" output mode.	PU resistor, being external resistor, whose impedance remains unchanged at "L" output mode.	For mass-production chip, leakage current only flows in Pch Tr at "L" output mode; for evaluation chip, current continues flowing in PU resistor at "L" output mode.
Notes for OSC	OSC constants -1	[2-pin RC OSC] Catalog guaranteed constants provide OSC at frequency specified in catalog.	[2-pin RC OSC] Different from mass-production chip in circuit design and characteristic.	[2-pin RC OSC] Frequency must be adjusted to OSC frequency of mass-production chip by adjusting variable resistor.
		[2-pin ceramic resonator OSC] Catalog guaranteed constants provide OSC at frequency specified in catalog.	[2-pin ceramic resonator OSC] Different from mass-production chip in circuit design and characteristic. Wiring capacitance may provide unstable OSC.	[2-pin ceramic resonator OSC] External constants must be fine-adjusted according to service conditions.
	OSC constants -2 (Note)	[2-pin ceramic resonator OSC] Feedback resistor is contained.	[2-pin ceramic resonator OSC] No feedback resistor is contained.	[2-pin ceramic resonator OSC] For evaluation chip, feedback resistor of 1Mohm must be connected externally.

Continued on next page.

Continued from preceding page.

Classification	Item	Function		Notes for evaluation
		Mass-production chip	Evaluation chip	
Notes for electrical characteristics	OSC frequency	OSC frequency characteristic as indicated in catalog.	Different from mass-production chip in circuit design, and characteristic.	ES, CS must be used to evaluate characteristic in detail.
	Operating current, standby current	Current characteristic as indicated in catalog.	Different from mass-production chip in circuit design, characteristic.	
Other notes	Type No. setting	LC6527/28 differ in ROM, RAM.	ROM, RAM to be used according to Type No. are set by INSTC, MEMC.	INSTC, MEMC are set according to Type No. of mass-production chip.
	Evaluation chip pin setting		Input pin RSTC, which is not provided in mass-production chip, is provided.	SW4 on evaluation board must remain turned OFF.

Note) When the evaluation chip is used in the 2-pin ceramic resonator OSC mode, no feedback resistor is contained unlike the mass-production chip. Connect a feedback resistor of 1Mohm externally as shown below. Since constants R, C are also differ from those for the mass production chip, refer to Table 1 and adjust the capacitor value according to the stray capacitance of the circuit.

Fig. 1 2-Pin Ceramic Resonator OSC Circuit for Evaluation Chip and Mass-production Chip

Table 1 Reference Values of Constants R C

(\*) Standard cable (FAS-20-03B) is a cable attached to target board EVA-TB6523C/26C/27C/28C.

Table 1 shows two cases where the capacitance of the cable is included and no capacitance of the cable is included.

- Example where the capacitance of the cable is included

The capacitance of the cable is included when the resonator is connected to the user's application board through the cable from the EVA-TB6523C/26C/27C/28C.

- Example where no capacitance of the cable is included

No capacitance of the cable is included when the resonator is placed near the evaluation chip (on the EVA-TB6523C/26C/27C/28C).

When using any other cable than the attached cable, adjust the capacitor value according to the stray capacitance.

**LC6527C/H, 6528C/H Option Code Specifying Method**

**General Description**

It is requested that you should submit to us various mask options of the LC6527C/H, LC6528C/H together with the program code which are stored in an EPROM.

By using our cross assembler for the LC6527, 6528, the option code can be specified interactively and stored in the EPROM.

If our cross assembler is not used, specify the option code as shown below. (This is the same as the method where the cross assembler is created automatically.)

The Type No. of the EPROM to be submitted is 2732 or 2764.

DISCONTINUED PRODUCT

C Version (LC6527C, LC6528C) Option Code Specifying Method

Always write '0' in the area of 0.

Note: When the 2-pin OSC mode is selected, always write '0'.

**Notes for Standby Function Application**

The LC6527C/H, 6528C/H provide the standby function called HALT mode to minimize the current dissipation when the program is in the wait state.

The standby function is controlled by the HALT instruction, PA pin,  $\overline{RES}$  pin.

A peripheral circuit and program must be so designed as to provide precise control of the standby function. In most applications where the standby function is performed, voltage regulation, instantaneous break of power, and external noise are not negligible. When designing an application circuit and program, whether or not to take some measures must be considered according to the extent to which these factors are allowed. This section mainly describes power failure backup for which the standby function is mostly used. A sample application circuit where the standby function is performed precisely is shown below and notes for circuit design and program design are also given below.

When using the standby function, the application circuit shown below must be used and the notes must be also fully observed.

If any other method than shown in this section is applied, it is necessary to fully check the environmental conditions such as power failure and the actual operation of application equipment.

**1. HALT mode release conditions**

The HALT mode setting, release conditions are shown in Table 1.

Table 1 HALT mode setting, release conditions

HALT mode setting conditions	HALT mode release conditions
HALT instruction Provided that PA <sub>3</sub> is at high level.	① Reset (Low level is applied to $\overline{RES}$ .) ② Low level is applied to PA <sub>3</sub> .

Note) HALT mode release condition ② is available only when the RC mode is used for system clock generation; and unavailable when the ceramic resonator mode is used because the OSC circuit may not operate normally.

**2. Proper cares in using standby function**

When using the standby function, an application circuit and program must be designed with the following in mind.

- (1) The supply voltage at the standby state must not be less than specified.
- (2) Input timing and conditions of each control signal ( $\overline{RES}$ , PA<sub>3</sub>) must be observed at the standby initiate/release state.
- (3) Release operation must not be overlapped at the time of execution of the HALT instruction.

A sample application where the standby function is used for power failure backup is shown below as a concrete method to observe these notes. A sample application circuit, its operation, and notes for program design are given below.

Sample application where the standby function is used for power failure backup.

Power failure backup is an application where power failure of the main power source is detected and the HALT instruction is executed to cause the standby state to be entered. The power dissipation is minimized and a backup capacitor is used to retain the contents of the internal registers for a certain period of time. After power is restored, a reset occurs automatically and the execution of the program starts at address 000H of the program counter (PC). Shown below are sample applications where the program selects or not between power-ON reset and reset after power is restored, notes, measures for instantaneous break of AC power.

2-1. Sample application 1 where the standby function is used for power failure backup

Shown below is a sample application where the program does not select between power-ON reset and reset after power is restored.

2-1-1. Sample application circuit – (1)

Fig. 2-1 shows a sample application where the standby function is used for power failure backup.

(Note) Normal input ports other than PA3

Fig. 2-1. Sample application – (1) where the standby function is used for power failure backup

2-1-2. Operating waveform in sample application circuit – (1)

The operating waveform in the sample application circuit in Fig. 2-1 is shown in Fig. 2-2. The mode is roughly divided as follows:

- (a) Power-ON reset
- (b) Instantaneous break of main power source
- (c) Return from power failure backup

V+TRON: V+ value when TR is turned ON/OFF

Fig. 2-2 Operating waveform in sample application circuit – (1)

2-1-3. Operation of sample application circuit – (1)

(a) At the time of power-ON reset

After power rises, a reset occurs automatically and the execution of the program starts at address 000H of the program counter (PC).

– Note –

This sample application circuit provides an indeterminate region where no reset occurs before the operating VDD range is entered.

(b) At the time of instantaneous break

(i) When the PXX input voltage does not meet V<sub>IL</sub> (the PXX input level does not get lower than input threshold level V<sub>IL</sub>) and the RES input voltage only meets V<sub>IL</sub>:

A reset occurs in the normal mode, providing the same operation as power-ON reset.

(ii) When both of the PXX input voltage and RES input voltage do not meet V<sub>IL</sub>:

The program continues running in the normal mode.

(iii) When both of the PXX input voltage and RES input voltage meet V<sub>IL</sub>:

When two pollings do not regard the PXX input voltage as "L" level, the HALT mode is not entered and reset occurs.

When two pollings regard the PXX input voltage as "L" level, the HALT mode is entered and after power is restored a reset occurs, releasing the standby mode.

(c) At the time of return from power failure backup

After power is restored, a reset occurs, releasing the standby mode.

2-1-4. Notes for design of sample application circuit – (1)

- V<sup>+</sup> rise time and C2  
Make the time constant (C2, R) of the reset circuit 10 times as long as the V<sup>+</sup> rise time. (R: ON-chip resistor, 200kohms typ.)  
Make the V<sup>+</sup> rise time shorter (up to 20ms).
- R1 and C1  
Make the R1 value as small as possible. Make the C1 value as large as possible according to the backup time calculated. (Fix the R1 value so that the C1 charging current does not exceed the power source capacity.)
- R2 and R3  
Make the "H"-level input voltage applied to the PXX pin equal to VDD.
- R4  
Fix the time constant of C2 and C4 so that C2 can discharge during the period of time from when V<sup>+</sup> gets lower than V<sup>+</sup>TRON(TR OFF) at the time of instantaneous break until the PXX input voltage gets lower than V<sub>IL</sub> (because release by reset is not available after the HALT mode is entered by instantaneous break).
- R5 and R6  
Make V<sup>+</sup> (V<sub>BE</sub>+0.6V is obtained by R5 and R6) when the reset circuit works (Tr ON) more than (operating VDD min + V<sub>F</sub> of diode D1).  
Observing this note, make V<sup>+</sup> as low as possible to provide a reset early enough after power-ON.
- Backup time  
The normal operation continues with a relatively high current dissipation from when power failure is detected by the PXX until the HALT instruction is executed. Fix the C1 value so that the standby supply voltage is held during backup time of set + above-mentioned time.

2-1-5. Notes for software design

- Design the program so that port A3 is brought to "H" level at the standby mode.
- Check a standby request by polling the input port twice.

(Example)

```

BP1      AAA      ; 1st polling
BP1      AAA      ; 2nd polling
HALT     ; Standby
    
```

AAA:

2-3. Sample application 3 where the standby function is used for power failure backup

2-3-1. Sample application circuit – (3) (There is an instantaneous break in power source.)

Fig. 2-5 shows a sample application where the standby function is used for power failure backup.

(Note) Normal input ports other than PA3

Fig. 2-5 Sample application – (3) where the standby function is used for power failure backup

2-3-2. Operating waveform in sample application circuit – (3)

The operating waveform in the sample application circuit in Fig. 2-5 is shown in Fig. 2-6. The mode is roughly divided as follows:

- (1) Power-ON reset
- (2) Instantaneous break of main power source
- (3) Return from power failure backup

Fig. 2-6 Operating waveform in sample application circuit – (3)

V+TR1ON: V+ value when TR1 is turned ON/OFF  
 V+TR3ON: V+ value when TR3 is turned ON/OFF

## 2-3-3. Operation of sample application circuit – (3)

## (a) At the time of power-ON reset

The operation and notes are the same as for sample application circuit – (2)

## (b) At the time of instantaneous break

(i) When the  $P_{XX}$  input voltage does not meet  $V_{IL}$  (the  $P_{XX}$  input level does not get lower than input threshold level  $V_{IL}$ ) and the  $\overline{RES}$  input voltage only meets  $V_{IL}$ :

A reset occurs in the normal mode. After reset release  $P_{XX}="H"$  is program-detected, deciding program start after instantaneous break.

(ii) When both of the  $P_{XX}$  input voltage and  $\overline{RES}$  input voltage do not meet  $V_{IL}$ :

The program continues running in the normal mode.

(iii) When both of the  $P_{XX}$  input voltage and  $\overline{RES}$  input voltage meet  $V_{IL}$ :

When two pollings do not regard the  $P_{XX}$  input voltage as "L" level, the HALT mode is not entered and a reset occurs.

When two pollings regard the  $P_{XX}$  input voltage as "L" level, the HALT mode is entered and after power is restored a reset occurs, releasing the standby mode. After standby release  $P_{XX}="H"$  is program-detected, deciding program start after instantaneous break.

## (c) At the time of return from power failure backup

The operation and notes are the same as for sample application circuit – (2)

## 2-3-4. Notes for design of sample application circuit – (3)

## • R3

Bias resistance of TR2

## • R7 and R8

Fix the R7 and R8 values so that TR3 is turned ON/OFF at approximately 1.5V of  $V^+$ .

Other notes are the same as for sample application circuit – (1)

## 2-3-5. Notes for software design

Same as for sample application circuit – (1)
