

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

TC74HC173AP, TC74HC173AF**QUAD D - TYPE REGISTER (3 - STATE)**

The TC74HC173A is a high speed CMOS D - TYPE REGISTER fabricated with silicon gate C²MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

It consists a 4 - bit register consisting of D - type flip - flops and 3 - state buffers. The four flip - flops are controlled by a common clock input (CK) and a common clear input (CLR).

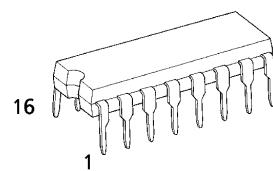

Signals applied to the data inputs (D1~D4) are stored in the respective flip - flops on the positive going transition of CK when clock control inputs (G1, G2) are held low.

The clear function is asynchronous to CK and active on a high level. The stored data are enabled to each outputs when output control inputs (M, N) are held low, else the outputs are high impedance state.

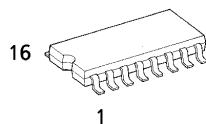

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

FEATURES :

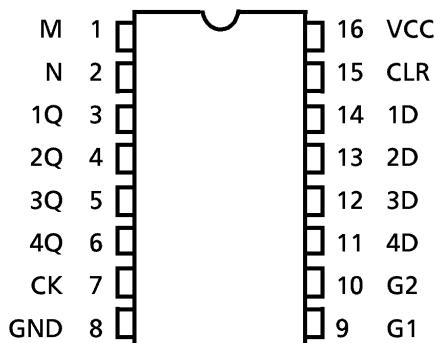

- High Speed..... $f_{MAX} = 47MHz$ (typ.) at $V_{CC} = 5V$
- Low Power Dissipation..... $I_{CC} = 4\mu A$ (Max.) at $T_a = 25^{\circ}C$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\% V_{CC}$ (Min.)
- Output Drive Immunity.....15 LSTTL Loads
- Symmetrical Output Impedance..... $|I_{OH}| = I_{OL} = 6mA$ (Min.)
- Balanced Propagation Delays..... $t_{PLH} \approx t_{PHL}$
- Wide Operating Voltage Range.... V_{CC} (opr.) = 2V ~ 6V
- Pin and Function Compatible with 74LS173

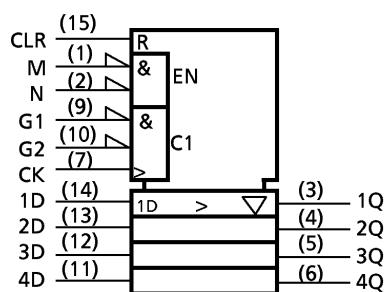

P (DIP16-P-300-2.54A)
Weight : 1.00g (Typ.)

F (SOP16-P-300-1.27)
Weight : 0.18g (Typ.)

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

				4.5	—	17	27	— 34	
				6.0	—	15	23	— 29	
Maximum Clock Frequency	f_{MAX}		50	2.0	9	20	—	MHz	
Input Capacitance	C_{IN}			4.5	43	67	—		
Output Capacitance	C_{OUT}			6.0	51	84	—		
Power Dissipation Capacitance	C_{PD} (1)			—	45	—	—	pF	

Note (1) C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation :

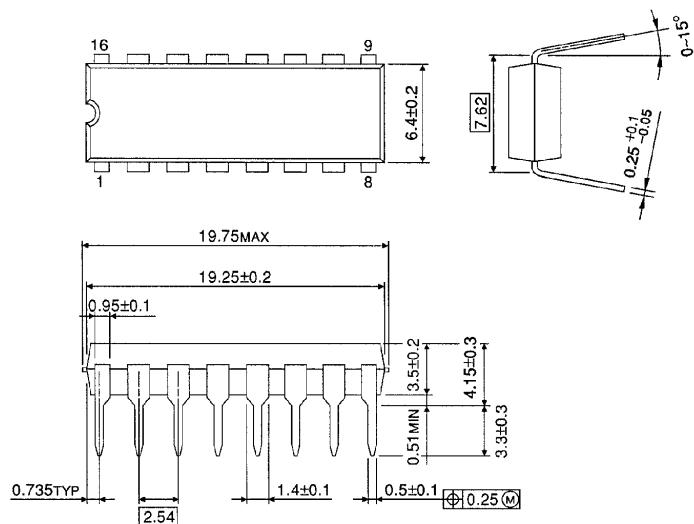

$$I_{CC}(\text{opr}) = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC}/4 \text{ (per Flip Flop)}$$

And the total C_{PD} when n pcs of Flip Flop operate be gained by the following equation :

$$CPD(\text{total}) = 28 + 17 \cdot n$$
