Description

HA-2640/883 monolithic operational amplifier is designed to deliver unprecedented dynamic specification for a high voltage internally compensated device. This dielectrically isolated device offer very low values for offset voltage and offset current coupled with large output voltage swing and common mode input voltage.

For maximum reliability, the HA-2640/883 offers unconditional output overload protection through output short circuit current limiting. This circuitry will limit the output to typically $\pm 25\text{mA}$ output drive current.

These amplifiers deliver $\pm 35\text{V}$ common mode input voltage swing, $\pm 35\text{V}$ output voltage swing, and up to $\pm 40\text{V}$ supply range for use in such designs as regulators, power supplies, and industrial control systems. The 5MHz typical gain-bandwidth product and $5\text{V}/\mu\text{s}$ slew rate (typ) make these devices excellent components for high performance signal conditioning applications. To insure compliance, all devices are 100% tested for slew rate, rise/fall time and overshoot. Outstanding input and output voltage swings coupled with a low 5nA offset current (typ), make these amplifiers excellent components for resolver excitation designs.
