

Microcontroller with LCD Driver MN101C527/MN101C54C

■ Overview

MN101C527/MN101C54C is a single-chip microcontroller, with a C language oriented high speed 8-bit CPU core (AM10), equipped with a LCD panel driver and a charge pump circuit that generates the LCD driver voltage. It incorporates a high precision 10-bit A/D converter, multi-functional timer counters, serial interfaces and other peripheral functions. Having those functions, it is ideal for home appliances and audio-visual equipment. The microcontroller and the LCD driver have individual power supplies. This makes it possible to operate the microcontroller and the LCD panel with different voltage values. Thus making it especially suitable for portable equipment, which operates in low power.

Also, with the inclusion of the pump circuit, which generates the LCD voltages and the internal divided resistance, the number of components can be reduced.

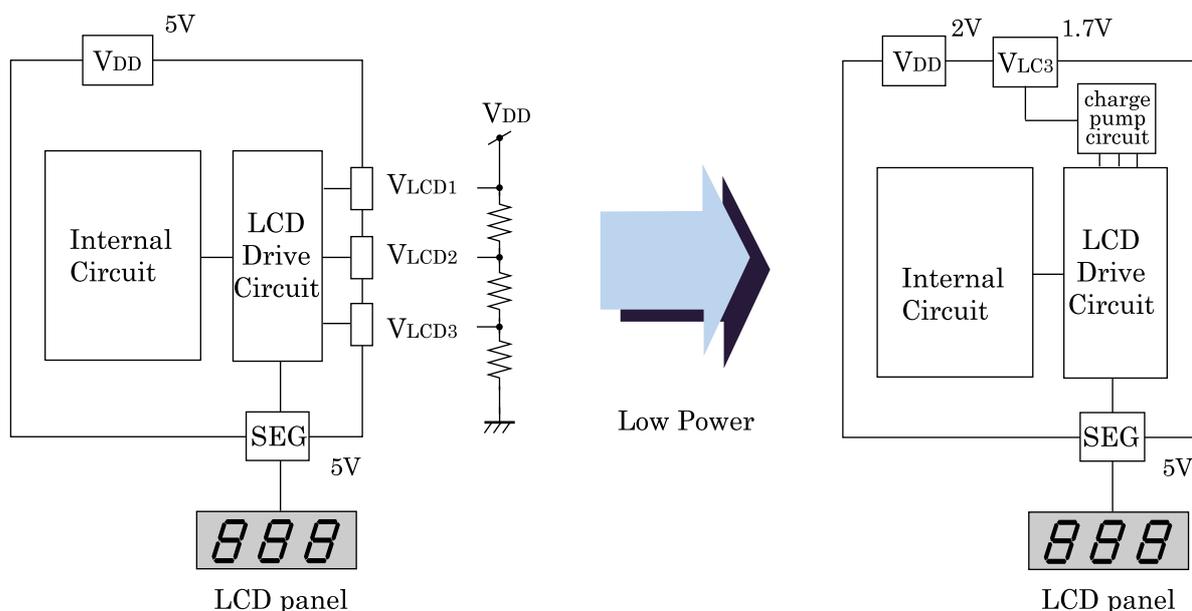

■ Features

- Microcontroller and LCD driver can operate with different voltage values.
- Free setting of LCD drive voltages (1.5 times to 3 times microcontroller voltage)
- Minimum operating speed 100ns (4.5 V to 5.5 V)
- Wide band operating power supply (2.0 V to 5.5 V)
- Minimum register set for simple architecture prepared.

■ Applications

- General home appliances , audio-visual equipment , health equipment
