

Complementary Darlington Power Transistors

DPAK For Surface Mount Applications

Designed for general purpose power and switching such as output or driver stages in applications such as switching regulators, converters, and power amplifiers.

- Lead Formed for Surface Mount Applications in Plastic Sleeves (No Suffix)
- Straight Lead Version in Plastic Sleeves ("–1" Suffix)
- Available on 16 mm Tape and Reel for Automatic Handling ("T4" Suffix)
- Surface Mount Replacements for 2N6034–2N6039 Series
- Monolithic Construction With Built-in Base-Emitter Shunt Resistors
- High DC Current Gain — $h_{FE} = 2500$ (Typ) @ $I_C = 4.0$ Adc
- Complementary Pairs Simplifies Designs

Figure 3. Thermal Response

Figure 4. Maximum Rated Forward Biased Safe Operating Area

Figure 5. Power Derating

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown. Safe operating area curves indicate $I_C - V_{CE}$ limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figures 6 and 7 is based on $T_{J(pk)} = 150^\circ\text{C}$; T_C is variable depending on conditions. Second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(pk)} < 150^\circ\text{C}$. $T_{J(pk)}$ may be calculated from the data in Figure 5. At high case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
