## 5mm Mini Oval Precision Optical Performance Red, Blue and Green LEDs. Data Sheet

### Description

These Precision Optical Performance Oval LEDs are specifically designed for full color/video and passenger information signs. The oval shaped radiation pattern and high luminous intensity ensure these devices are excellent for wide field of view outdoor applications where a wide viewing angle and readability in sunlight are essential. These lamps have very smooth, matched radiation patterns ensuring consistent color

mixing in full color applications, message uniformity across the viewing angle of the sign. High efficiency LED material is used in these lamps: Aluminium Indium Gallium Phosphide (AlInGaN) for red and Indium Gallium Nitride (InGaN) for blue and green. Each lamp is made with an advance optical grade epoxy offering superior high temperature and high moisture resistance in outdoor applications.

### Notes:

1. Tolerance for luminous intensity measurement is  $\pm 15\%$
2. The luminous intensity is measured on the mechanical axis of the lamp package.
3. The optical axis is closely aligned with the package mechanical axis.
4. The dominant wavelength  $\lambda_d$  is derived from the Chromaticity Diagram and represents the color of the lamp.
5. LED light output is bright enough to cause injuries to the eyes. Precautions must be taken to prevent looking directly at the LED without proper safety equipment.

Notes:

- The reverse voltage of blue and green is equivalent to the forward voltage of the protective chip at  $I_R = 10 \mu\text{A}$ .  
The reverse voltage of red is equivalent to the forward voltage of the protective chip at  $I_R = 100 \mu\text{A}$ .
- For AlInGaP Red, the thermal resistance applied to LED junction to cathode lead. For InGaN Blue and Green, the thermal resistance applied to LED junction to anode lead.
- The dominant wavelength  $\lambda_d$  is derived from the Chromaticity Diagram and represents the color of the lamp.
- Tolerance for each color bin limit is  $\pm 0.5 \text{ nm}$
- The radiant intensity,  $I_e$  in watts/steradian, may be found from the equation  $I_e = I_V / \eta_V$ , where  $I_V$  is the luminous intensity in candelas and  $\eta_V$  is the luminous efficacy in lumens/watt.
