PRODUCT DESCRIPTION

The PD070-HL1 is a high performance, low capacitance InGaAs photodiode with a photosensitive region 70 μ m in diameter. It has been specifically designed for low noise, high linearity analog optical receivers operating to 4GHz.

Planar semiconductor design and dielectric passivation provide low noise performance.

Reliability is assured by hermetic sealing and 100% purge burn-in (200°C, 15 hours, $V_r = 20V$). The device can be either pigtailed with SC, FC or ST connectors (UPC or APC) or mounted in an SC, ST or FC receptacle. Custom packages are also available.
