

74F845

8-Bit Transparent Latch

General Description

The 74F845 bus interface latch is designed to eliminate the extra packages required to buffer existing latches and provide extra data width for wider address/data paths or buses carrying parity.

The 74F845 is functionally- and pin-compatible with AMD's Am29845.

Features

- 3-STATE outputs
- Direct replacement for AMD's Am29845

Ordering Code:

Functional Description

The 74F845 consists of eight D-type latches with 3-STATE outputs. The flip-flops appear transparent to the data when Latch Enable (LE) is HIGH. This allows asynchronous operation as the output transition follows the data in transition. On the LE HIGH-to-LOW transition, the data that meets the setup times is latched. Data appears on the bus when the output Enable (OE) is LOW. When OE is HIGH, the bus output is in the high impedance state.
