

T6A41

COLUMN DRIVER LSI FOR A DOT MATRIX LCD

The T6A41 is a column driver with 64-output channels for a medium- or small-scale dot matrix LCD.

The T6A41 realizes low power LCD systems using the CMOS Si-Gate process.

The T6A41 has two bi-directional data Input/Output pins and three types of data flow (pin program):

- ① $O_1 \rightarrow O_{64}$, ② $O_{64} \rightarrow O_1$, ③ $O_1 \rightarrow O_{32}$, $O_{64} \rightarrow O_{33}$.

FEATURES

- 64-output column driver
- Three types of data flow (bi-directional);
 - ① $O_1 \rightarrow O_{64}$
 - ② $O_{64} \rightarrow O_1$
 - ③ $O_1 \rightarrow O_{32}$, $O_{64} \rightarrow O_{33}$
- High speed operation
- Low power consumption
- Power supply : $5V \pm 10\%$
- 92-pin plastic flat package

Weight: 1.4g (typ.)

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
