

# 2300-2700 MHz High Linearity SiGe Active Transmit Mixer

#### **Description**

The T0787 is a high linearity active mixer which is manufactured using Atmel Wireless & Microcontrollers' advanced Silicon-Germanium technology. This mixer features a frequency range of 2300 to 2700 MHz. It operates from a single 5 V supply and provides 9 dB of conversion gain while requiring only 0 dBm input to the integrated LO driver. An IF amplifier is also included.

The T0787 incorporates internal matching on each RF, IF and LO port to enhance ease of use and to reduce the external components required. The IF and LO inputs can be driven differentially or single ended.

Electrostatic sensitive device. Observe precautions for handling.

#### **Features**

- Active mixer with conversion gain
- No necessary external LO driver
- Low LO drive level required
- IF and LO ports may be driven single-ended
- Single 5 V supply voltage
- ullet Broadband resistive 50  $\Omega$  impedances on all three ports

### **Applications**

- · Digital communication systems
- 2300-2700 MHz transceivers for base stations

### **Block Diagram**

#### **Ozone Depleting Substances Policy Statement**

It is the policy of Atmel Germany GmbH to

- 1. Meet all present and future national and international statutory requirements.
- 2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**Atmel Germany GmbH** has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

- 1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
- 2. Class 1 and 11 ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
- 3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**Atmel Germany GmbH** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

#### We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use Atmel Wireless & Microcontrollers products for any unintended or unauthorized application, the buyer shall indemnify Atmel Wireless & Microcontrollers against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
