DESCRIPTION

The SA621 is a combined low-noise amplifier, mixer and VCO designed for high-performance low-power communication systems from 800-1000MHz. The low-noise preamplifier has a 1.7dB noise figure at 881MHz with 15dB gain and an IP3 intercept of -7dBm at the input. The gain is stabilized by on-chip compensation to vary less than $\pm 0.2\text{dB}$ over -40 to +85°C temperature range. The wide-dynamic-range mixer has a 12dB noise figure and IP3 of +4.5dBm at the input at 881MHz. The integrated VCO circuit with external resonator produces a high quality LO signal that drives the mixer and is buffered to an external PLL synthesizer IC. The nominal current drawn from a single 3V supply is 13.3mA. Additionally, the entire circuit can be powered down to further reduce the supply current to less than 20 μA .

FEATURES

- Low current consumption
- Outstanding gain and noise figure
- Excellent gain stability versus temperature and supply voltage
- LNA, mixer and VCO power down capability
- Monotonic VCO frequency vs control voltage

PIN CONFIGURATION

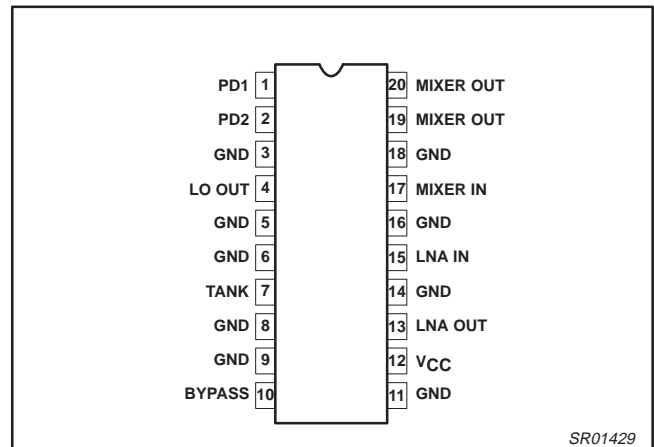

Figure 1. Pin Configuration

APPLICATIONS

- 900MHz cellular and cordless front-end
- Spread spectrum receivers
- RF data links
- UHF frequency conversion
- Portable radio

T_{STG}	Storage temperature range	-65 to +150	$^\circ\text{C}$

NOTE:

- Transients exceeding 8V on V_{CC} pin may damage product.
- Maximum dissipation is determined by the operating ambient temperature and the thermal resistance,
 θ_{JA} : 20-Pin SSOP = 110 $^\circ\text{C}/\text{W}$
- Pins 19 and 20 are ESD sensitive (mixer outputs).
