## DATA SHEET

## 74ALVC573

Octal D-type transparent latch; 3-state

## FEATURES

- Wide supply voltage range from 1.65 to 3.6 V
- Complies with JEDEC standards:

JESD8-7 (1.65 to 1.95 V )
JESD8-5 ( 2.3 to 2.7 V )
JESD8B/JESD36 (2.7 to 3.6 V ).

- 3.6 V tolerant inputs and outputs
- CMOS low power consumption
- Direct interface with TTL levels (2.7 to 3.6 V)
- Power-down mode
- Latch-up performance exceeds 250 mA
- ESD protection:

HBM EIA/JESD22-A114-A exceeds 2000 V MM EIA/JESD22-A115-A exceeds 200 V.

## DESCRIPTION

The 74ALVC573 is a high-performance, low-power, low-voltage, Si-gate CMOS device and superior to most advanced CMOS compatible TTL families.

The 74ALVC573 is an octal D-type transparent latch featuring separate D-type inputs for each latch and 3-state outputs for bus oriented applications. A latch enable (LE) input and an output enable ( $\overline{\mathrm{OE})}$ input are common to all internal latches.

The 74ALVC573 consists of eight D-type transparent latches with 3-state true outputs. When LE is HIGH, data at the Dn inputs enters the latches. In this condition the latches are transparent, i.e. a latch output will change state each time its corresponding D-input changes.

When LE is LOW the latches store the information that was present at the D-inputs a set-up time preceding the HIGH-to-LOW transition of LE. When OE is LOW, the contents of the 8 latches are available at the outputs. When $\overline{\mathrm{OE}}$ is HIGH, the outputs go to the high-impedance OFF-state. Operation of the $\overline{\mathrm{OE}}$ input does not affect the state of the latches.

The 74ALVC573 is functionally identical to the 74ALVC373, but the has a different pin arrangement.

## QUICK REFERENCE DATA

GND $=0 \mathrm{~V} ; \mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$.

| SYMBOL | PARAMETER | CONDITIONS | TYPICAL | UNIT |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{t}_{\text {PHL }} / \mathrm{t}_{\text {PLH }}$ | propagation delay input Dn to output Qn | $\mathrm{V}_{\mathrm{CC}}=1.8 \mathrm{~V} ; \mathrm{C}_{\mathrm{L}}=30 \mathrm{pF} ; \mathrm{R}_{\mathrm{L}}=1 \mathrm{k} \Omega$ | 2.5 | ns |
|  |  | $\mathrm{V}_{\mathrm{CC}}=2.5 \mathrm{~V} ; \mathrm{C}_{\mathrm{L}}=30 \mathrm{pF} ; \mathrm{R}_{\mathrm{L}}=500 \Omega$ | 2.0 | ns |
|  |  | $\mathrm{V}_{\mathrm{CC}}=2.7 \mathrm{~V} ; \mathrm{C}_{\mathrm{L}}=50 \mathrm{pF} ; \mathrm{R}_{\mathrm{L}}=500 \Omega$ | 2.3 | ns |
|  |  | $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V} ; \mathrm{C}_{\mathrm{L}}=50 \mathrm{pF} ; \mathrm{R}_{\mathrm{L}}=500 \Omega$ | 2.2 | ns |
| $\mathrm{C}_{1}$ | input capacitance |  | 3.5 | pF |
| $\mathrm{C}_{\text {PD }}$ | power dissipation capacitance per buffer | $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}$; notes and 1 <br> outputs enabled outputs disabled | $\begin{aligned} & 37 \\ & 7 \end{aligned}$ | $\begin{aligned} & \mathrm{pF} \\ & \mathrm{pF} \end{aligned}$ |

## Notes

$C_{P D}$ is used to determine the dynamic power dissipation ( $P_{D}$ in $\mu W$ ).
$P_{D}=C_{P D} \times V_{C C}{ }^{2} \times f_{i} \times N+\Sigma\left(C_{L} \times V_{C C}{ }^{2} \times f_{o}\right)$ where:
$\mathrm{f}_{\mathrm{i}}=$ input frequency in MHz ;
$\mathrm{f}_{\mathrm{o}}=$ output frequency in MHz ;
$\mathrm{C}_{\mathrm{L}}=$ output load capacitance in pF ;
$\mathrm{V}_{\mathrm{CC}}=$ supply voltage in Volts;
$\mathrm{N}=$ total load switching outputs;
$\Sigma\left(C_{L} \times V_{C C}{ }^{2} \times f_{0}\right)=$ sum of the outputs.

1. The condition is $\mathrm{V}_{\mathrm{I}}=\mathrm{GND}$ to $\mathrm{V}_{\mathrm{Cc}}$.

Octal D-type transparent latch; 3-state
74ALVC573

## FUNCTION TABLE

See note 1

| OPERATING MODES | INPUT |  |  | INTERNAL LATCH | $\begin{gathered} \hline \text { OUTPUT } \\ \hline \text { Qn } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | OE | LE | Dn |  |  |
| Enable and read register (transparent mode) | L | H | L | L | L |
|  | L | H | H | H | H |
| Latch and read register | L | L | I | L | L |
|  | L | L | h | H | H |
| Latch register and disable outputs | H | L | 1 | L | Z |
|  | H | L | h | H | Z |

## Note

1. $\mathrm{H}=\mathrm{HIGH}$ voltage level;
a) $h=$ HIGH voltage level one set-up time prior to the HIGH-to-LOW LE transition;
b) $L=$ LOW voltage level;
c) $I=$ LOW voltage level one set-up time prior to the HIGH-to-LOW LE transition;
d) $Z=$ high-impedance OFF-state.

ORDERING INFORMATION

| TYPE NUMBER | PACKAGE |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |

## 74ALVC573

RECOMMENDED OPERATING CONDITIONS

| SYMBOL | PARAMETER | CONDITIONS | MIN. | MAX. | UNIT |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{V}_{\mathrm{CC}}$ | supply voltage |  | 1.65 | 3.6 | V |
| $\mathrm{~V}_{\mathrm{I}}$ | input voltage |  | 0 | 3.6 | V |
| $\mathrm{~V}_{\mathrm{O}}$ | output voltage | $\mathrm{V}_{\mathrm{CC}}=1.65$ to 3.6 V ; enable mode | 0 | $\mathrm{~V}_{\mathrm{CC}}$ | V |
|  |  | $\mathrm{V}_{\mathrm{CC}}=1.65$ to 3.6 $\mathrm{V} ;$ disable mode | 0 | 3.6 | V |
|  |  | $\mathrm{~V}_{\mathrm{CC}}=0 \mathrm{~V} ;$ Power-down mode | 0 | 3.6 | V |
| $\mathrm{~T}_{\mathrm{amb}}$ | operating ambient temperature |  | -40 | +85 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{t}_{\mathrm{r}}, \mathrm{t}_{\mathrm{f}}$ | input rise and fall times | $\mathrm{V}_{\mathrm{CC}}=1.65$ to 2.7 V | 0 | 20 | $\mathrm{~ns} / \mathrm{V}$ |
|  |  |  | $\mathrm{V}_{\mathrm{CC}}=2.7$ to 3.6 V | 0 | 10 |

## LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 60134); voltages are referenced to GND (ground = 0 V ).

| SYMBOL | PARAMETER | CONDITIONS | MIN. | MAX. | UNIT |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{V}_{\mathrm{CC}}$ | supply voltage |  | -0.5 | +4.6 | V |
| $\mathrm{I}_{\mathrm{IK}}$ | input diode current | $\mathrm{V}_{\mathrm{I}}<0$ | - | -50 | mA |
| $\mathrm{~V}_{\mathrm{I}}$ | input voltage |  | -0.5 | +4.6 | V |
| $\mathrm{I}_{\mathrm{OK}}$ | output diode current | $\mathrm{V}_{\mathrm{O}}>\mathrm{V}_{\mathrm{CC}}$ or $\mathrm{V}_{\mathrm{O}}<0$ | - | $\pm 50$ | mA |
| $\mathrm{~V}_{\mathrm{O}}$ | output voltage | enable mode; notes 1 and 2 | -0.5 | $\mathrm{~V}_{\mathrm{CC}}+0.5$ | V |
|  |  | disable mode | -0.5 | +4.6 | V |
|  |  | Power-down mode; note 2 | -0.5 | +4.6 | V |
| $\mathrm{I}_{\mathrm{O}}$ | output source or sink current | $\mathrm{V}_{\mathrm{O}}=0$ to $\mathrm{V}_{\mathrm{CC}}$ | - | $\pm 50$ | mA |
| $\mathrm{I}_{\mathrm{CC}}, \mathrm{I}_{\mathrm{GND}}$ | $\mathrm{V}_{\mathrm{CC}}$ or GND current |  | - | $\pm 100$ | mA |
| $\mathrm{~T}_{\text {stg }}$ | storage temperature |  | -65 | +150 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{P}_{\text {tot }}$ | power dissipation | $\mathrm{T}_{\text {amb }}=-40$ to $+85^{\circ} \mathrm{C} ;$ note 3 | - | 500 | mW |

## Notes

1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. When $\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$ (Power-down mode), the output voltage can be 3.6 V in normal operation.
3. For SO20 packages: above $70^{\circ} \mathrm{C}$ the value of $\mathrm{P}_{\text {tot }}$ derates linearly with $8 \mathrm{~mW} / \mathrm{K}$.
a) For TSSOP20 packages: above $60^{\circ} \mathrm{C}$ the value of $\mathrm{P}_{\text {tot }}$ derates linearly with $5.5 \mathrm{~mW} / \mathrm{K}$.
b) For DHVQFN20 packages: above $60^{\circ} \mathrm{C}$ the value of $\mathrm{P}_{\text {tot }}$ derates linearly with $4.5 \mathrm{~mW} / \mathrm{K}$.

Octal D-type transparent latch; 3-state

## DC CHARACTERISTICS

At recommended operating conditions; voltages are referenced to GND (ground = 0 V ).

## SOLDERING

## Introduction to soldering surface mount packages

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "Data Handbook IC26; Integrated Circuit Packages" (document order number 9398652 90011).

There is no soldering method that is ideal for all surface mount IC packages. Wave soldering can still be used for certain surface mount ICs, but it is not suitable for fine pitch SMDs. In these situations reflow soldering is recommended.

## Reflow soldering

Reflow soldering requires solder paste (a suspension of fine solder particles, flux and binding agent) to be applied to the printed-circuit board by screen printing, stencilling or pressure-syringe dispensing before package placement. Driven by legislation and environmental forces the worldwide use of lead-free solder pastes is increasing.

Several methods exist for reflowing; for example, convection or convection/infrared heating in a conveyor type oven. Throughput times (preheating, soldering and cooling) vary between 100 and 200 seconds depending on heating method.

Typical reflow peak temperatures range from 215 to $270^{\circ} \mathrm{C}$ depending on solder paste material. The top-surface temperature of the packages should preferably be kept:

- below $220^{\circ} \mathrm{C}\left(\mathrm{SnPb}\right.$ process) or below $245{ }^{\circ} \mathrm{C}$ (Pb-free process)
- for all BGA and SSOP-T packages
- for packages with a thickness $\geq 2.5 \mathrm{~mm}$
- for packages with a thickness < 2.5 mm and a volume $\geq 350 \mathrm{~mm}^{3}$ so called thick/large packages.
- below $235^{\circ} \mathrm{C}\left(\mathrm{SnPb}\right.$ process) or below $260^{\circ} \mathrm{C}$ (Pb-free process) for packages with a thickness $<2.5 \mathrm{~mm}$ and a volume < $350 \mathrm{~mm}^{3}$ so called small/thin packages.

Moisture sensitivity precautions, as indicated on packing, must be respected at all times.

## Wave soldering

Conventional single wave soldering is not recommended for surface mount devices (SMDs) or printed-circuit boards with a high component density, as solder bridging and non-wetting can present major problems.

To overcome these problems the double-wave soldering method was specifically developed.

If wave soldering is used the following conditions must be observed for optimal results:

- Use a double-wave soldering method comprising a turbulent wave with high upward pressure followed by a smooth laminar wave.
- For packages with leads on two sides and a pitch (e):
- larger than or equal to 1.27 mm , the footprint longitudinal axis is preferred to be parallel to the transport direction of the printed-circuit board;
- smaller than 1.27 mm , the footprint longitudinal axis must be parallel to the transport direction of the printed-circuit board.
The footprint must incorporate solder thieves at the downstream end.
- For packages with leads on four sides, the footprint must be placed at a $45^{\circ}$ angle to the transport direction of the printed-circuit board. The footprint must incorporate solder thieves downstream and at the side corners.

During placement and before soldering, the package must be fixed with a droplet of adhesive. The adhesive can be applied by screen printing, pin transfer or syringe dispensing. The package can be soldered after the adhesive is cured.

Typical dwell time of the leads in the wave ranges from 3 to 4 seconds at $250^{\circ} \mathrm{C}$ or $265^{\circ} \mathrm{C}$, depending on solder material applied, SnPb or Pb -free respectively.

A mildly-activated flux will eliminate the need for removal of corrosive residues in most applications.

## Manual soldering

Fix the component by first soldering two diagonally-opposite end leads. Use a low voltage ( 24 V or less) soldering iron applied to the flat part of the lead. Contact time must be limited to 10 seconds at up to $300^{\circ} \mathrm{C}$.

When using a dedicated tool, all other leads can be soldered in one operation within 2 to 5 seconds between 270 and $320^{\circ} \mathrm{C}$.

Suitability of surface mount IC packages for wave and reflow soldering methods

| PACKAGE ${ }^{(1)}$ | SOLDERING METHOD |  |
| :---: | :---: | :---: |
|  | WAVE | REFLOW ${ }^{(2)}$ |
| BGA, LBGA, LFBGA, SQFP, SSOP-T(3), TFBGA, VFBGA <br> DHVQFN, HBCC, HBGA, HLQFP, HSQFP, HSOP, HTQFP, <br> HTSSOP, HVQFN, HVSON, SMS <br> PLCC ${ }^{(5)}$, SO, SOJ <br> LQFP, QFP, TQFP <br> SSOP, TSSOP, VSO, VSSOP | not suitable <br> not suitable ${ }^{(4)}$ <br> suitable <br> not recommended ${ }^{(5)(6)}$ <br> not recommended ${ }^{(7)}$ | suitable <br> suitable <br> suitable <br> suitable <br> suitable |

## Notes

1. For more detailed information on the BGA packages refer to the "(LF)BGA Application Note" (AN01026); order a copy from your Philips Semiconductors sales office.
2. All surface mount (SMD) packages are moisture sensitive. Depending upon the moisture content, the maximum temperature (with respect to time) and body size of the package, there is a risk that internal or external package cracks may occur due to vaporization of the moisture in them (the so called popcorn effect). For details, refer to the Drypack information in the "Data Handbook IC26; Integrated Circuit Packages; Section: Packing Methods".
3. These transparent plastic packages are extremely sensitive to reflow soldering conditions and must on no account be processed through more than one soldering cycle or subjected to infrared reflow soldering with peak temperature exceeding $217^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}$ measured in the atmosphere of the reflow oven. The package body peak temperature must be kept as low as possible.
4. These packages are not suitable for wave soldering. On versions with the heatsink on the bottom side, the solder cannot penetrate between the printed-circuit board and the heatsink. On versions with the heatsink on the top side, the solder might be deposited on the heatsink surface.
5. If wave soldering is considered, then the package must be placed at a $45^{\circ}$ angle to the solder wave direction. The package footprint must incorporate solder thieves downstream and at the side corners.
6. Wave soldering is suitable for LQFP, TQFP and QFP packages with a pitch (e) larger than 0.8 mm ; it is definitely not suitable for packages with a pitch (e) equal to or smaller than 0.65 mm .
7. Wave soldering is suitable for SSOP, TSSOP, VSO and VSSOP packages with a pitch (e) equal to or larger than 0.65 mm ; it is definitely not suitable for packages with a pitch (e) equal to or smaller than 0.5 mm .

## DATA SHEET STATUS

| LEVEL | DATA SHEET STATUS ${ }^{(1)}$ | PRODUCT STATUS ${ }^{(2)(3)}$ | DEFINITION |
| :---: | :---: | :---: | :---: |
| I | Objective data | Development | This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice. |
| II | Preliminary data | Qualification | This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product. |
| III | Product data | Production | This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). |

## Notes

1. Please consult the most recently issued data sheet before initiating or completing a design.
2. The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL http://www.semiconductors.philips.com.
3. For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

## DEFINITIONS

Short-form specification - The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition - Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information - Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## DISCLAIMERS

Life support applications - These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes - Philips Semiconductors reserves the right to make changes in the products including circuits, standard cells, and/or software described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no licence or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
