## Transceivers

## 74F2952 Registered transceiver, non-inverting (3-State) <br> 74F2953 Registered transceiver, inverting (3-State)

## FEATURES

- 8-bit registered transceivers
- Two 8-bit, back-to-back registers store data moving in both directions between two bidirectional buses
- Separate Clock, Clock Enable and 3-State Enable provided for each register
- 74F2952 non-inverting
- 74F2953 inverting
- AM2952/2953 functional equivalent
- 'A' outputs sink 24 mA and source 3 mA
- 'B' outputs sink 64mA and source 15 mA
- 300 mil wide 24-pin Slim DIP package

## DESCRIPTION

The 74F2952 and 74F2953 are 8-bit registered transceivers. Two 8-bit back-to-back registers store data flowing in both directions between two bi-directional buses. Data applied to the inputs is entered and stored on the rising edge of the Clock (CPXX) provided that the Clock Enable (CEXX) is Low. The data is then present at the 3-State output buffers, but is only accessible when the Output Enable ( $\overline{O E X X}$ ) is Low. Data flow from ' $A$ ' inputs to ' $B$ ' outputs is the same as for ' $B$ ' inputs to ' $A$ ' outputs.

## NOTES:

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$.
3. Not more than one output should be shorted at a time. For testing los, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, los tests should be performed last.

| Data Sheet Identification | Product Status | Definition |
| Objective Specification | Formative or in Design | This data sheet contains the design target or goal specifications for product development. Specifications <br> may change in any manner without notice. |
| Preliminary Specification | Preproduction Product | This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips <br> Semiconductors reserves the right to make changes at any time without notice in order to improve design <br> and supply the best possible product. |
| Product Specification | Full Production | This data sheet contains Final Specifications. Philips Semiconductors reserves the right to make changes <br> at any time without notice, in order to improve design and supply the best possible product. |

Philips Semiconductors and Philips Electronics North America Corporation reserve the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## LIFE SUPPORT APPLICATIONS

Philips Semiconductors and Philips Electronics North America Corporation Products are not designed for use in life support appliances, devices, or systems where malfunction of a Philips Semiconductors and Philips Electronics North America Corporation Product can reasonably be expected to result in a personal injury. Philips Semiconductors and Philips Electronics North America Corporation customers using or selling Philips Semiconductors and Philips Electronics North America Corporation Products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors and Philips Electronics North America Corporation for any damages resulting from such improper use or sale.
