A. HE83760 Introduction

HE83760 is a member of 8-bit Micro-controller series developed by King Billion Electronics Ltd. This IC build-in 3072-dot LCD driver, and also have 32-bit I/O port. Also built-in OP comparator can be used with (light、voice、temperature、humility) sensor and used as battery low detection. The 7-bit current-type D/A converter and PWM device provide the complete speech output mechanism. The 2M byte ROM and 16K byte RAM can be used in the storage of speech、graphic、text etc.. The built-in DTMF generator can generate the PSTN dialing tone directly.

HE83760 can be used in Translator、Data Bank、Pocket Dialer、Educational Toy、Digital Voice Recording System etc.

The instruction set of HE83760 are quite easy to learn and simple to use. Only about thirty instructions with four-type addressing mode are provided. Most of instructions take 3 oscillator clocks (machine cycles). The processing power is enough to most of battery operation system.

C. Internal Block

Please always take in mind that ICE is different from IC. ICE is the whole set of HE80000 series IC, but each IC is a subset of ICE. Never use any hardware resource that real IC didn't have, especially RAM and register. KBIDS and compiler cannot prevent user to use some hardware resource that didn't exist. Please check the following table and refer the abbreviation in HE80000 user's manual.

Note:　　*1: Drive Current Spec. for Push-Pull I/O port only

　　　　　Sink Current Spec. for both Push-Pull and Open-Drain I/O port.

　　*2: This Spec. base on one driver only. There are five build-in driver, so user just multiply

　　　the number of driver he used to one driver current to get the total amount of current.

J. Important Note

1. Please always take in mind that ICE is different from IC. ICE is the whole set of HE80000 series IC, but each IC is a subset of ICE. Never use any hardware resource that real IC didn't have, especially RAM and register. KBIDS and compiler cannot prevent user to use some hardware resource that didn't exist. Please check the following table and refer the abbreviation in HE80000 user's manual.

2. LCD driving circuit must be turn off <u>before</u> IC goes into <u>sleep mode</u>.

3. Please bonds the TSTP_P, RSTP_N and PRTD[7:0] with test point on PCB (can be soldered and probed) as you can, then KB can do some IC testing job on PCB. Neither VDD nor GND connection is necessary for TSTP_P. The following figure is an example (Testing point with through hole).
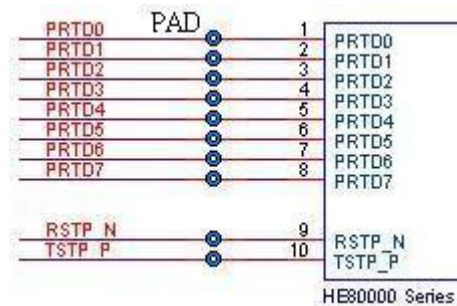

4. LV3 must small than 9.0 Volt. Otherwise IC may breakdown.
