

## 47 $\mu$ F AC-Coupling Capacitor Low Voltage Video Driver with LPF

### ■GENERAL DESCRIPTION

The NJM2512 is a Low Voltage Video Amplifier featuring small AC-coupling Capacitor.

The NJRC original Technology "ASC(Advanced SAG Correction)" realizes 47 $\mu$ F AC-Coupling Capacitor which enables to downsize mounting space.

No worrying about beat noise caused by charge-pump circuit, and over-current caused by circuit short out than Capacitor-less video driver.

The NJM2512 is suitable for any video application.

## ■ APPLICATION NOTE

NJM2512 has possibilities that decrease in the capacitance in low-frequency band when the ceramic capacitor is used(pin7). It is a possibility that the sag is generated when the ceramic capacitor decreases capacity. Please verify it in consideration of the capacity drop of the ceramic capacitor.
