Digital Input Hi-Fi Class-D Headphone Amplifier

BU7839GVW

Description

Most suitable for long duration reproduction of digital audio because digital audio data is taken as its input and low power consumption is realized.

BU7839GVW has Stereo Audio DAC and HP amp functions for digital audio playback.

Pop sound in ramp-up period is reduced due to built-in start-up sound reduction circuit or transistor for mute.

Also, Built-in digital volume which can control L-ch & R-ch separately.

Features

- 1) With Stereo Audio DAC and HP amp functions
- Most suitable for long duration reproduction of digital audio because digital audio data is taken as its input and low power consumption is realized
- 3) Pop sound in ramp-up period is reduced due to built-in start-up sound reduction circuit or transistor for mute
- 4) Built-in digital volume which can control L-ch & R-ch separately Immediate switching and zero cross switching for reduction of clicking sound at the time of gain change Gain change methods of soft switching can be selected with registers
- 5) Sampling frequency compatible with 8kHz-48kHz
- 6) Compatible with master slave with built-in PLL
- 7) Built-in soft mute function
- 8) Compatible with full front and full back formats
- 9) Compatible with 16, 18 & 24bit formats
- 10) Compatible with fs=32kHz,44.1kHz,48kHz with de-emphasis function
- 11) 2wire CPU I/F (2 addresses selectable 33h, 36h)

Function

- Stereo Audio DAC + HPamp
- 2wire CPU I/F
- Serial audio I//F
- Interpolator
- ΔΣModulator
- Level Shifter
- PLL

•Absolute maximum rating

	1		
Parameter	Symbol	rating	Unit
Analog power supply voltage	AVDD	-0.3 ~ 4.5	V
Digital power supply voltage	DVDD	-0.3 ~ 2.1	V
Digital IO power supply voltage	DVDDI	-0.3 ~ 4.5	V
Terminal applied voltage 1	VIN1	DVSS-0.3 ~ DVDDIO+0.3	V
Terminal applied voltage 2 *1	VIN2	DVSS-0.3 ~ 4.5	V
Allowance loss	Pd	520 *2	mW
Storage temperature range	Tstg	-50 ~ 125	degree
Operation temperature range	Topr	-30 ~ 85	degree

Fig.1 Absolute maximum rating

*1 SDA,SCL terminal

*2 When you use at above Ta = 25 degree, 52mW are reduced concerning 1degree When you mount 114.6mm x 76.2mm x 1.6mm

Note:When you use under the conditions which exceed this value, there are times when the device is destroyed. In addition usual operation is not guaranteed.

•Recommended operating range

Description (see	0		Limit		l locit
Parameter	Symbol	Min	Тур	Max	Unit
Analog power supply voltage	AVDD	2.5	2.8	3.0	V
Digital IO power supply voltage	DVDDIO	DVDD	-	3.0	V
Digital power supply voltage	DVDD	1.35	1.50	1.65	V

Fig.2 Recommended operating range

•External size figure

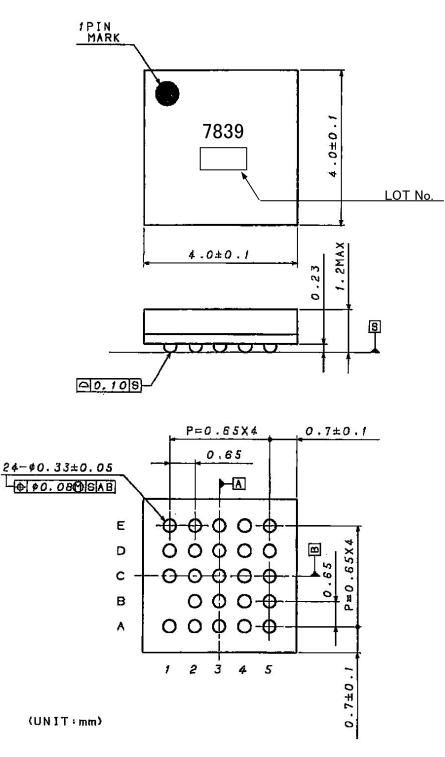

Fig.3 External size figure

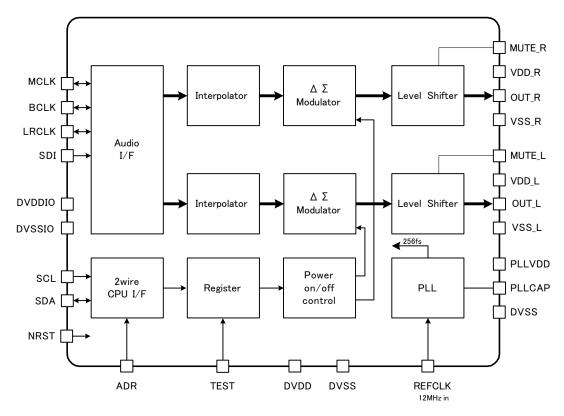

Fig. 4 Block diagram

- •Description of each block
 - 2wire CPU I/F
 - Interface with CPU, 2-wire control
 - Write/read possible
 - Device address is 2-address selectable (33h,36h) with ADR terminal
 - Register
 - This LSI is controlled all by register Write/read by 2wire CPU I/F
 - Write/read by
 - Audio I/F
 - Compatible with three modes of full front, full back and IIS Sampling frequency compatible with 8kHz~48kHz
 - Interpolator, ΔΣModulator

Variable over sampling, Order-variable $\Delta\Sigma$ modulator

- Optimum value is selected internally and automatically
- Level Shifter

Level conversion in 3V series of analogue output

- Built-in mute transistor for start-up sound reduction
- PLL

REFCLK terminal is taken as reference clock and 256fs is created It becomes the default setting when 12MHz is inputted to REFCLK Please change each setting if any frequency other than 12MHz is inputted to REFCLK

PSRR	Psrr	-	0	-	dB	

Table 9 Electrical characteristic

<S/N measuring method>

Measure the level ratio of the respective integral values of the signals and noise within the band of 20kHzLPF +A-Weight.

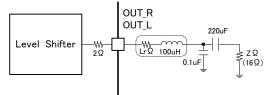

<THD+N measuring method>

Measure the level ratio of the total harmonic component + (plus) noise and the basic wave frequency component within the band of 20kHzLPF +A-Weight.

Output amplitude error

Output amplitude is determined by the equivalent series resistance of external coil. Let Lr, VDD and Z respectively stand for the equivalent series resistance, the power supply voltage value of VDD_R,VDD_L and the load impedance, the standard value of output amplitude becomes the following equation:

Standard value of output amplitude [Vpp] = VDD x 0.5 x Z / (Lr + Z + 2)

Shown in the following table is the standard values of output amplitude if VDD=2.8V, Load impedance Z=16 Ω , and Equivalent series resistance is 0.7 Ω , 4 Ω or 7 Ω .

Equivalent series resistance [Ω]	Standard value of output amplitude [Vpp]	Standard value of output amplitude [dBv]	Output power [mW]
0.0	1.24	-7.13	12.10
0.7	1.20	-7.46	11.21
4.0	1.02	-8.87	8.10
7.0	0.90	-9.98	6.27

Table 10DC characteristic

●2wire CPU I/F Part

Device address is "0110011"(33h) or "0110110"(36h), i.e. 33h when ADR terminal is L or 36h when ADR terminal is H.

Please don't switch the ADR terminal while 2wire CPU I/F is operating.

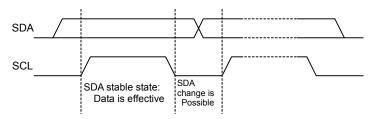

The transmission rate is compatible with a maximum of 400kbps

ADR		2wire CPU I/F device address								
ADR	A7	A6	W/R							
0	0	1	1	0	0	1	1	0/1		
1	0	1	1	0	1	1	0	0/1		

Bit transmission

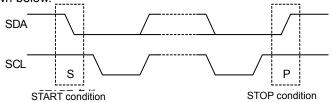

The data of 1bit is transmitted while SCL is H. In case of bit transmission, the signal transition of SDA can not be implemented while SCL is H.

If SDA changes while SCL is H, START condition or STOP condition is generated, it is interpreted as control signal.

• START condition/STOP condition

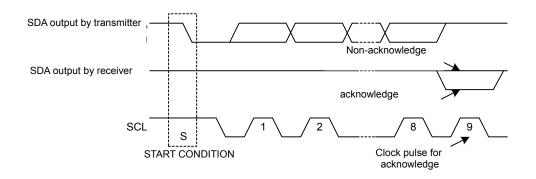

Data transmission on bus is not implemented while SDA and SCL are H. At this time, if SCL remains to be H and SDA is transited from H to L, then the START condition (S) is attained and so the access is started, and if SCL remains to be H and SDA is transited from L to H, then the STOP condition (P) is attained and so the access is terminated, which is shown below.

This device accepts the continuous START condition and the continuous STOP condition.

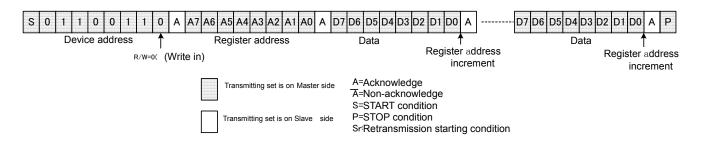

• Acknowledge

After START condition is generated, data is transmitted at 8 bits once. After 8 bit transmission, the transmitter opens SDA, and the receiver returns the acknowledge signal with SDA taken as L.

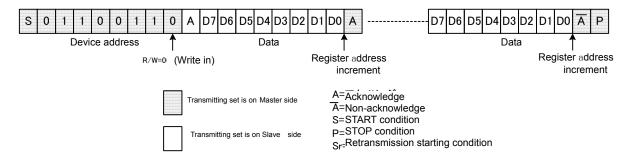

• Write protocol

Write protocol is shown below. Register address is transmitted by 1 byte after device address and write command have been transmitted. Third byte writes the data, which is written in by second byte, into internal register, and for fourth byte and subsequent bytes, the register address is incremented automatically. But, the register address becomes 00h by the transmission of 1 byte after the register address has become the final address (6Ch). The address is incremented after the transmission is over.

• Readout protocol

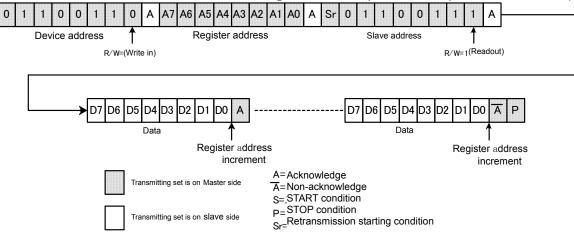

Readout starts from 1 byte after device address and R/W bit have been written in. For the address after the readout register is finally accessed and the subsequent addresses, the data of the addresses that have been incremented is read out. As the readout of 1 byte after the address has become the final address, 00h is read out. The address is incremented after the transmission is over.

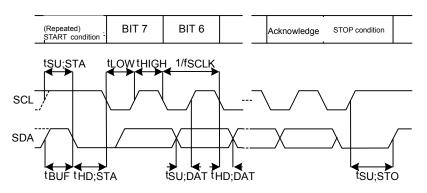

• Compound readout protocol

S

After internal address is specified, create the retransmission starting condition, change the data transmitting direction and implement the readout. Subsequently, the data of the address that has been incremented is read out. As the readout of 1 byte after the address has become the final address, 00h is read out. The address is incremented after the transmission is over. After retransmission starting condition, compound write is possible with R/W=0 (write in).

The contents described herein are correct as of August, 2008

The contents described herein are subject to change without notice. For updates of the latest information, please contact and confirm with ROHM CO.,LTD.

 Any part of this application note must not be duplicated or copied without our permission.
Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.

Any data, including, but not limited to application circuit diagrams and information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO, LTD, disclaims any warranty that any use of such devices shall be free from infringement of any third party's intelectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.

• Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by ROHM CO., LTD. is granted to any such buyer.

The products described herein utilize silicon as the main material.
The products described herein are not designed to be X ray proof.

The products listed in this catalog are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

Contact us for further information about the products.

Notes

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM CO.,LTD.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.

Thank you for your accessing to ROHM product informations. More detail product informations and catalogs are available, please contact your nearest sales office.
