### TRIPLE 2-CHANNEL ANALOG MULTIPLEXERS/DEMULTIPLEXERS

#### DESCRIPTION

UTC **4053** is triple 2-channel analog multiplexers/demultiplexers for application as digitally-controlled analog switches.

The device has three separate digital control inputs and an inhibit input. It feature low ON impedance and very low OFF leakage current. Control of analog signals up to the complete supply voltage range can be achieved.

#### FEATURES

- \* Wide Analog Voltage Range:  $V_{DD}-V_{EE} = 3V\sim 18V$ .  
(Note:  $V_{EE}$  must be  $\leq V_{SS}$ )
- \* Break-Before-Make Switching Eliminates Channel Overlap.
- \* Linearized Transfer Characteristics
- \* Implement an SPDT Switch Effectively.
- \* Pin to Pin Replacement for CD4053

Note 1. Data of "TYP" is intended as an indication of the IC's potential performance.

2. For voltage drops across the switch ( $\Delta V_{sw} > 600\text{mV}$  ( $> 300\text{mV}$  at high temperature)), excessive  $V_{DD}$  current may be drawn, i.e. the current out of the switch may contain both  $V_{DD}$  and switch input components. The reliability of the device will be unaffected unless the Maximum Ratings are exceeded.
