XC6210 Series

High Current, High Speed LDO Regulators

◆CMOS
◆Low Power Consumption :35μA (TYP.)
◆Maximum Output Current :More than 700mA
(800mA limit, TYP.)
◆Dropout Voltage :50mV @ 100mA
:100mV @ 200mA
◆Operating Voltage Range :1.5V ~ 6.0V
◆Output Voltage Range :0.8V ~ 5.0V
◆Low ESR Capacitor Compatible

■APPLICATIONS

●CD-ROMs, CD-R / RW drive
●DVD drive
●HDD drive
●Cameras, Video recorders
●Portable AV equipment
●Battery powered equipment

■GENERAL DESCRIPTION

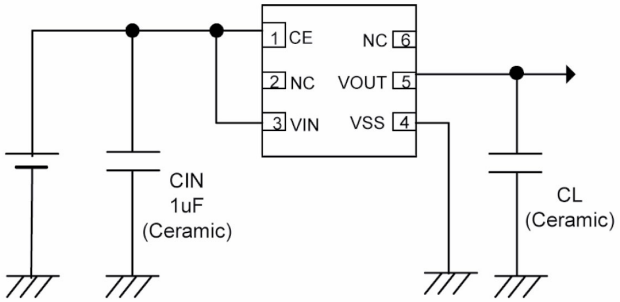
The XC6210 series are precise, low noise, high current, positive voltage low dropout regulators. They are fabricated using Torex's CMOS process.
The series features a voltage reference, an error amplifier, a current limiter, and a phase compensation circuit plus a driver transistor.
With a low ON resistance driver transistor built into, batteries can be used until input-output voltage differential is minimal and can accordingly be used for a longer time.
The series is also compatible with low ESR ceramic capacitors which give added output stability.
The output voltage of the LDO is selectable in 50mV increments within the range of 0.8V to 5.0V.
The current limiter's foldback circuit also operates as the output current limiter and the output pin protection.
The IC's internal regulator circuit can be placed in stand-by mode via the CE function. In the stand-by mode, power consumption is greatly reduced.

www.DataSheet4U.com

■FEATURES

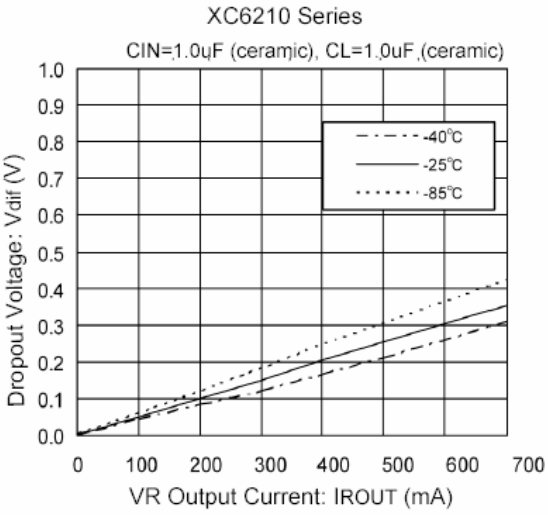
Maximum Output Current : More than 700mA
(800mA limit, TYP.)
(1.6V≦VOUT(T)≦5.0V)
Dropout Voltage : 50mV@IOUT=100mA
Operating Voltage Range : 1.5V ~ 6.0V
Output Voltage Range : 0.8V ~ 5.0V
(50mV increments)
Highly Accurate : ±2%
(The setting voltage accuracy)
Low Power Consumption : 35μA (TYP.)
High Ripple Rejection : 60dB @1kHz
Operational Ambient Temperature
: - 40℃ ~ 85℃
Ultra Small Packages : SOT-25 (SOT-23-5)
SOT-89-5
USP-6B

■TYPICAL APPLICATION CIRCUIT

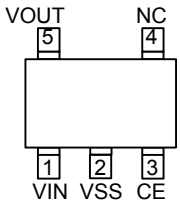


■TYPICAL PERFORMANCE CHARACTERISTICS

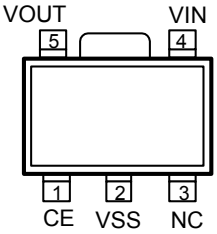
●Dropout Voltage vs. Output Current



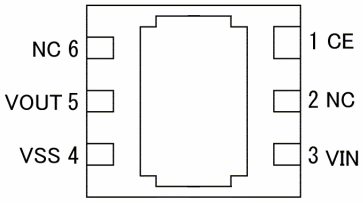
■PIN CONFIGURATION



SOT-25 (TOP VIEW)



SOT-89-5 (TOP VIEW)



USP-6B (BOTTOM VIEW)

*The dissipation pad for the USP-6B package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the VSS pins.

■PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTION
SOT-25	SOT-89-5	USP-6B		
3	1	1	CE	ON/OFF Control
1	4	3	VIN	Power Input
2	2	4	VSS	Ground
5	5	5	VOUT	Output
4	3	2, 6	NC	No Connection

■PRODUCT CLASSIFICATION

●Selection Guide

CE Input Logic, Internal Pull-Up / Down Resistor

SERIES	CE INPUT LOGIC

●Output Capacitor Corresponding Chart

VR OUTPUT VOLTAGE	0.8V~1.45V	1.5V ~ 1.75V	1.8V ~ 5.0V
CL	More than 6.8μF	More than 4.7μF	More than 1.0μF

■OPERATIONAL EXPLANATION

<Output Voltage Regulator Control>

The voltage, divided by resistors R1 & R2, which are connected to the VOUT pin is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled & stabilized by negative feedback. The constant current limit circuit and short circuit protection operate in relation to the level of output current.

<Low ESR Capacitor>

With the XC6210 series regulator, a stable output voltage is achievable even if low ESR capacitors are used, as a phase compensation circuit is built into the regulator. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (CL) be connected as close as possible, between the output pin (VOUT) and the VSS pin. Please use an output capacitor (CL) with a capacitance, based on the chart below. We also suggest an input capacitor (CIN) of 1μF: this should be connected between VIN and VSS in order to stabilize input power source.

Output Capacitor Corresponding Chart

VOUT	0.8V ~ 1.45V	1.5V ~ 1.75V	1.8V ~ 5.0V
CL	More than 6.8μF	More than 4.7μF	More than 1.0μF

<Current Limiter, Short-Circuit Protection>

The XC6210 series regulator offers a combination of current limit and short circuit protection by means of a built-in fixed current limiter circuit and a foldback circuit. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, the output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

<CE Pin>

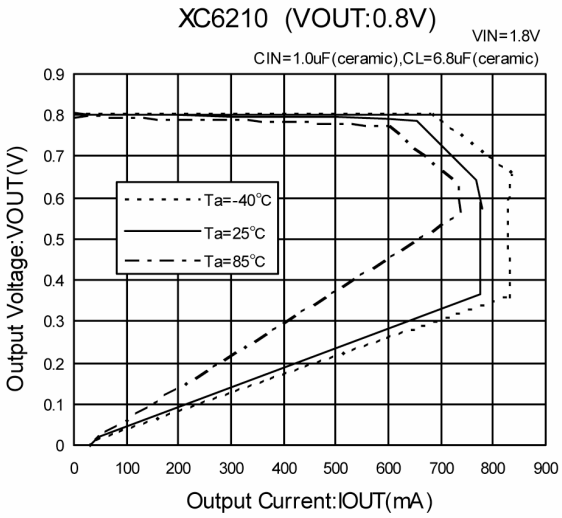
The IC's internal regulator circuitry can be shut down via the signal from the CE pin with the XC6210 series. In shutdown mode, output at the VOUT pin will be pulled down to the VSS level via R1 & R2. Options are available for the CE pin logic (See the product classification). Note that as the XC6210B types are 'High Active / No Pull-Down', operations will become unstable with the CE pin open. Although the CE pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC is in operation. We suggest that you use this IC with either a VIN voltage or a VSS voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry if a voltage other than VIN or VSS is applied.

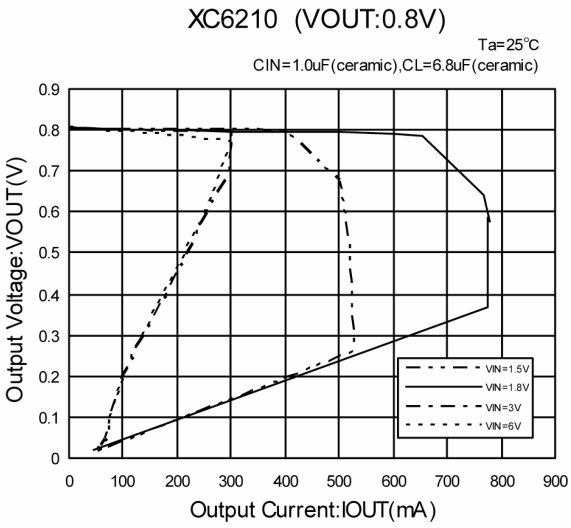
■NOTES ON USE

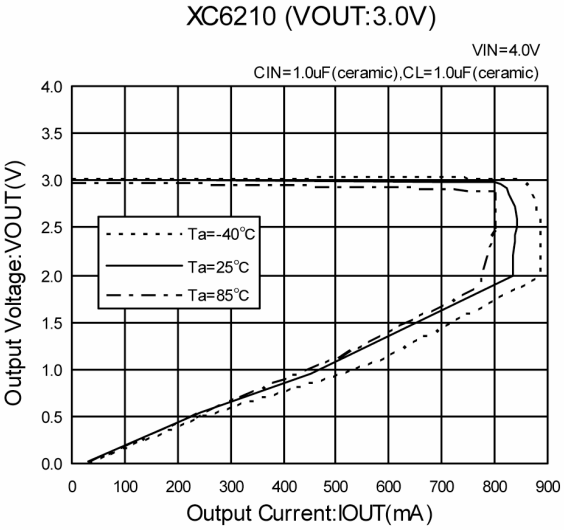
1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen VIN and VSS wiring in particular.
3. Please wire the input capacitor (CIN) and the output capacitor (CL) as close to the IC as possible. Should rapid input fluctuation or load fluctuation occur, please increase the capacitor value such as CIN or CL to stabilize the operation.

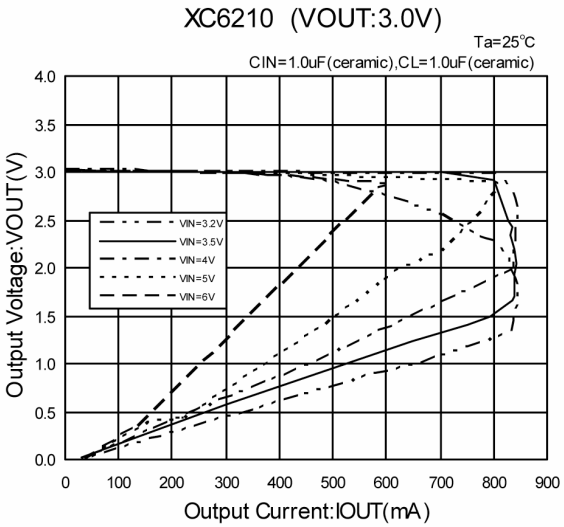
■TYPICAL PERFORMANCE CHARACTERISTICS

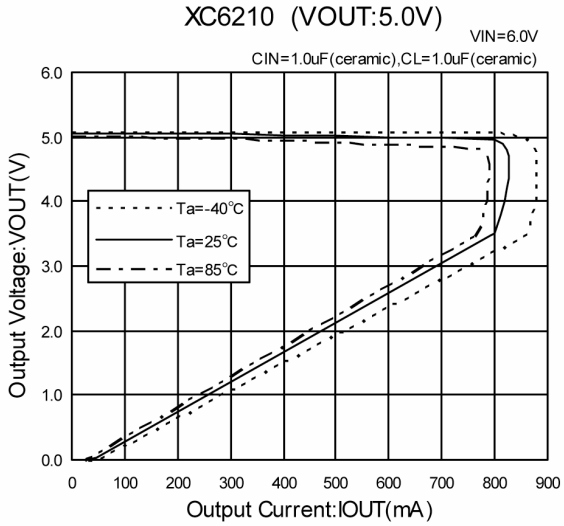
(1) Output Voltage vs. Output Current

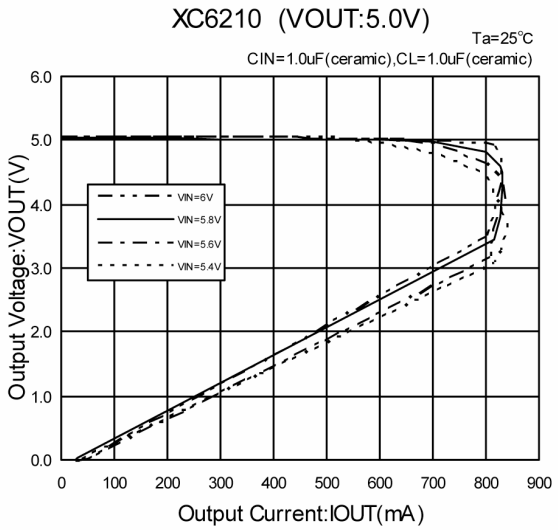






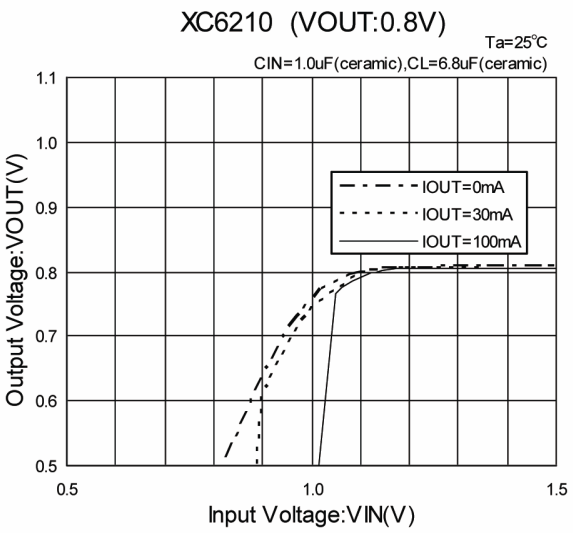


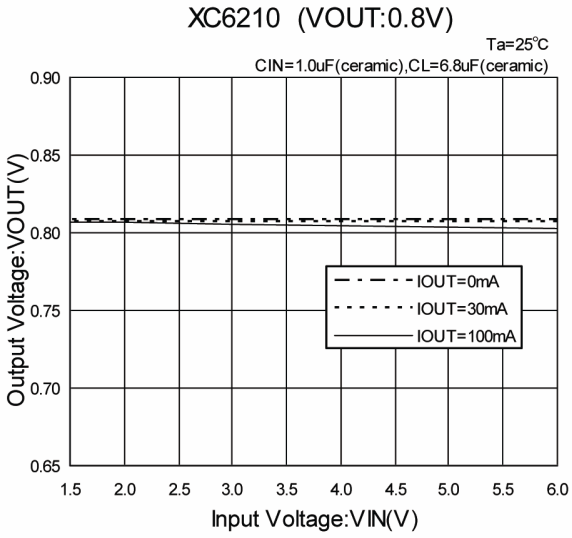


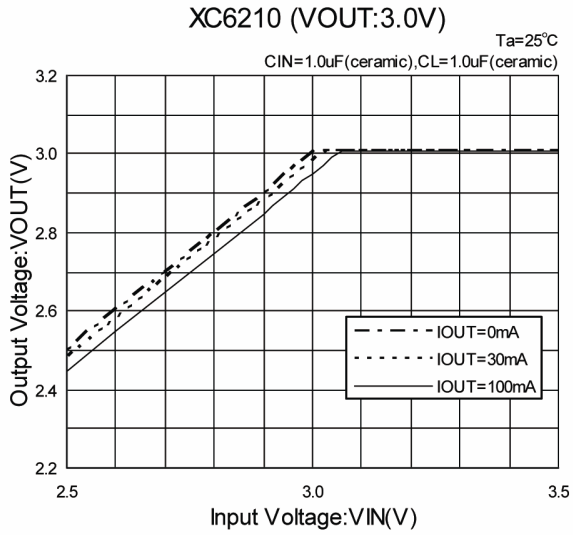


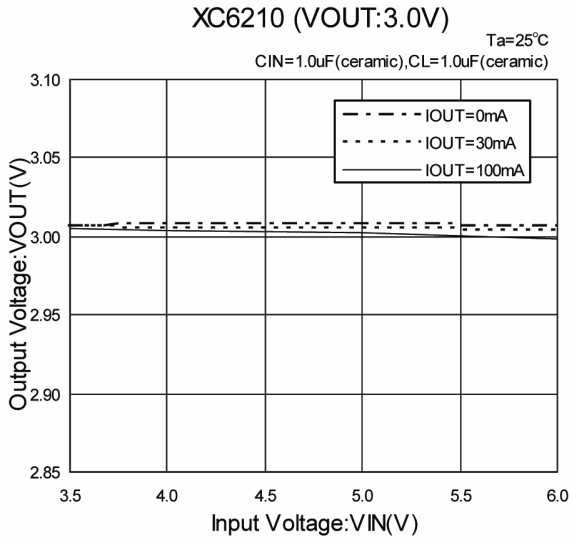
■TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

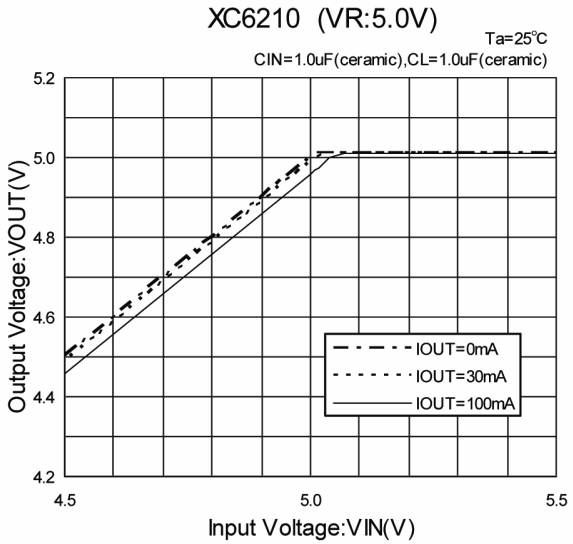
(2) Output Voltage vs. Input Voltage

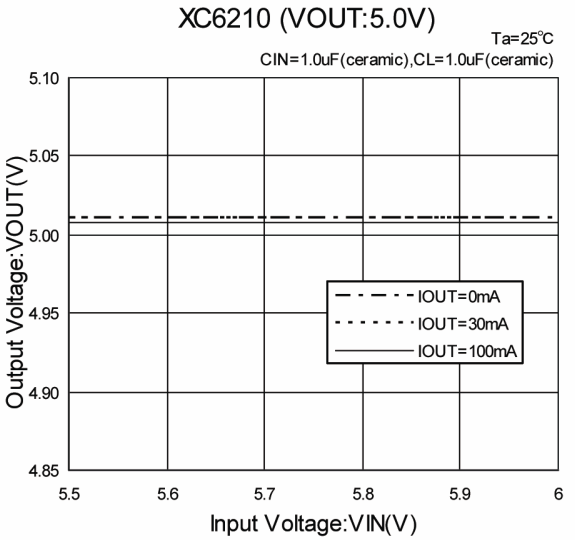








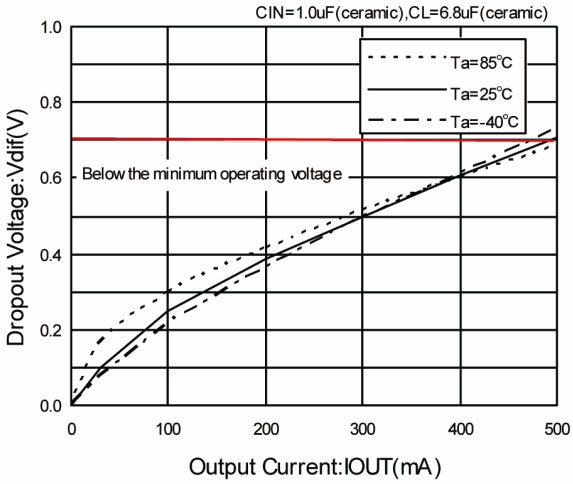




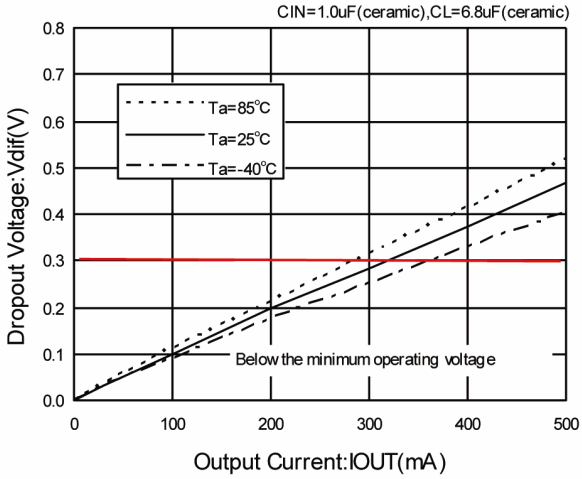
■TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

(3) Dropout Voltage vs. Output Current

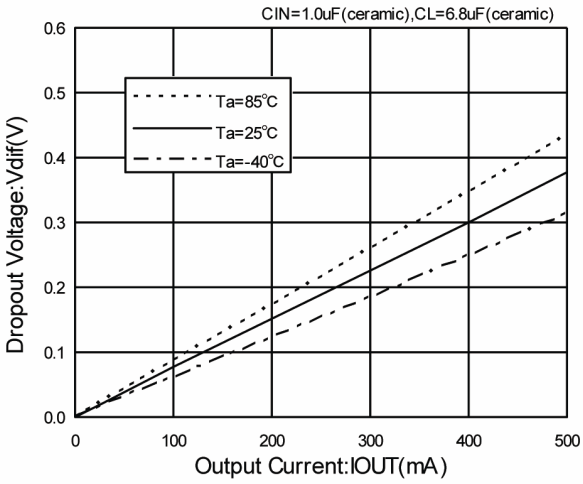
XC6210 (VOUT:0.8V)



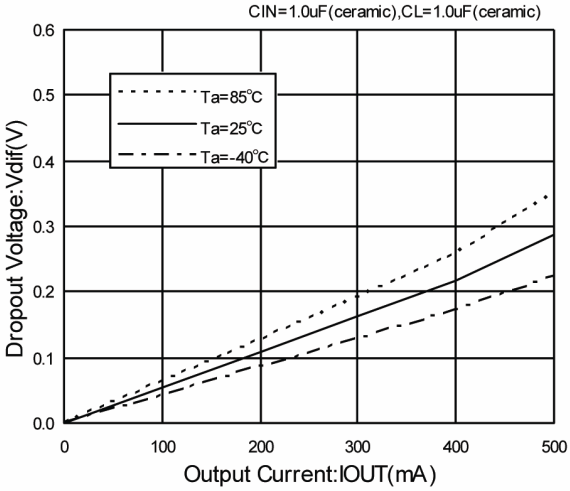
XC6210 (VOUT:1.2V)



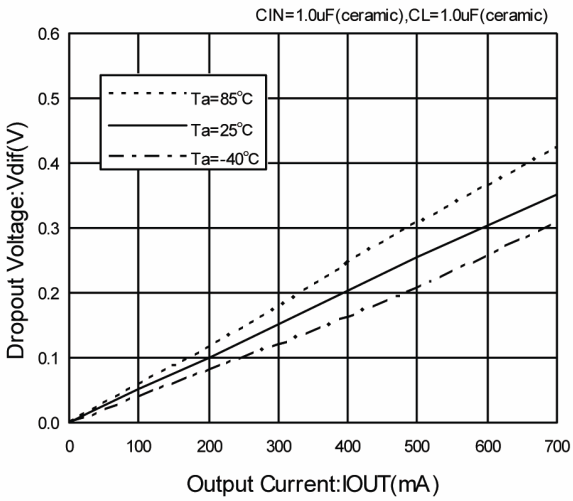
XC6210 (VOUT:1.5V)



XC6210 (VOUT:2.5V)



XC6210 (VOUT:3.0V)



XC6210 (VOUT:5.0V)

1. The products and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this catalog is up to date.
2. We assume no responsibility for any infringement of patents, patent rights, or other rights arising from the use of any information and circuitry in this catalog.
3. Please ensure suitable shipping controls (including fail-safe designs and aging protection) are in force for equipment employing products listed in this catalog.
4. The products in this catalog are not developed, designed, or approved for use with such equipment whose failure of malfunction can be reasonably expected to directly endanger the life of, or cause significant injury to, the user.
   (e.g. Atomic energy; aerospace; transport; combustion and associated safety equipment thereof.)
5. Please use the products listed in this catalog within the specified ranges.
   Should you wish to use the products under conditions exceeding the specifications, please consult us or our representatives.
6. We assume no responsibility for damage or loss due to abnormal use.
7. All rights reserved. No part of this catalog may be copied or reproduced without the prior permission of Torex Semiconductor Ltd.
