

# Quad BTL Power Driver

## AM5810

The AM5810 is a 4-channel BTL driver - 2 channels are able to use for stepping motor, and 1 channel is for reversible driver - designed to be used with ordinary electronic equipment (such as audio-visual equipment, office automation equipment, communications devices, electrical appliances, and electronic toys).

### ● Applications

CD players

### ● Features

- 1) A power saving mode is enabled by power-saver terminal.
- 2) Small surface mounting power package (HSOP-28)
- 3) Separating Vcc into Pre and Pow, can make better power efficiency
- 4) Thermal-shut-down circuit built in
- 5) Wide dynamic range <4.0V (Typ.) at PreVcc=12V, PowVcc=5V>
- 6) BTL driver: Input pins consist of (+) and (-), therefore various input types are available such as differential input.
- 7) Loading driver:
  - a. The output voltage is adjustable by output voltage control terminal. (Only "H" side voltage)
  - b. Brake circuit built in
  - c. Circuit protection diode built in
