# Radiation Hardened Dual J-K Flip-Flop with Set and Reset

The Radiation Hardened ACS109MS is a Dual J-K Flip-Flop with Set and Reset. These Flip-Flops have independent J,  $\overline{K}$ , Set, Reset, and Clock inputs and Q and  $\overline{Q}$  outputs. The outputs change state on the positive-going transition of the clock. Set and Reset are accomplished asynchronously by Low-level inputs. All inputs are buffered and the outputs are designed for balanced propagation delay and transition times.

The ACS109MS is fabricated on a CMOS Silicon on Sapphire (SOS) process, which provides an immunity to Single Event Latch-up and the capability of highly reliable performance in any radiation environment. These devices offer significant power reduction and faster performance when compared to ALSTTL types.

Specifications for Rad Hard QML devices are controlled by the Defense Supply Center in Columbus (DSCC). The SMD numbers listed below must be used when ordering.

Detailed Electrical Specifications for the ACS109MS are contained in SMD 5962-98632. A "hot-link" is provided on our homepage for downloading. http://www.intersil.com/spacedefense/spaceselect.htm
