

AZ10EL11
AZ100EL11
(3.3 V operation)

**1:2 Differential
Fanout Buffer**

FEATURES

- 265ps Propagation Delay
- 5ps Skew Between Outputs
- High Bandwidth Output Transitions
- 75kΩ Internal Input Pulldown Resistors
- Direct Replacement for Motorola MC10EL11 & MC100EL11
- Manufactured Under License By Lucent Technologies

DESCRIPTION

The AZ10EL/100EL11 is a differential 1:2 fanout gate. The device is functionally similar to the E111 device but with higher performance capabilities. Having within-device skews and output transition times significantly improved over the E111, the EL11 is ideally suited for those applications which require the ultimate in AC performance.

The differential inputs of the EL11 employ clamping circuitry to maintain stability under open input conditions. If the inputs are left open (pulled to V_{EE}) the Q outputs will go LOW.

1. Within-device skew defined as identical transitions on similar paths through a device.
2. Duty cycle skew is the difference between a T_{PLH} and T_{PHL} propagation delay through a device.
3. Minimum input swing for which AC parameters guaranteed. The device has a DC gain of ≈ 40 .
4. The CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between V_{ppmin} and 1V. The lower end of the CMR range is dependent on V_{EE} and is equal to $V_{EE} + 1.8V$.
