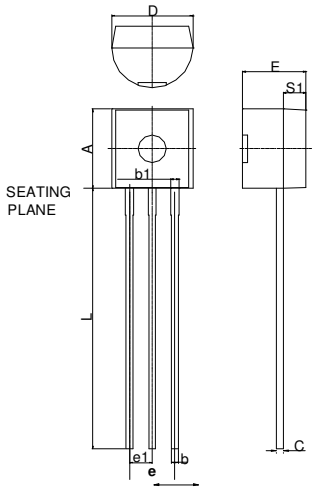
S62FP

CMOS Positive

Voltage Regulator

RoHS Compliant Product

TO-92



Description

The S62FP series is a group of positive voltage output, three-pin regulators, that provide a high current even when the input/output voltage differential is small. Low power consumption and high accuracy is achieved through CMOS and laser trimming technologies. The S62FP consists of a high-precision voltage reference, an error amplification circuit, and a current limited output driver. Transient response to load variations have improved in comparison to the existing series.

Features

* Small Input-Output Differential:I_{OUT}=100mA@V_{OUT}=5V with a 0.12V differential
* Highly Accruate: Output Voltage ± 2%
* Low Power Consumption: Typ. 2uA@V_{OUT}=5V
* Output Voltage Range: 1.5V~6V in 0.1V increments
* Input Stability: Typ. 0.2%/V
* Output Voltage Temperature Characteristics: Typ. ±100ppm/ºC
* Max. Output Current: 250mA (Within Max. Power Dissipation, V_{OUT}=5V)
