

# Multichannel detector head controller **C7557**

For control of multichannel detector head and data acquisition

C7557 is specifically designed for basic control in multichannel photometry. When connected to a Hamamatsu multichannel detector head and a personal computer, C7557 allows easy control of the detector head and data acquisition by using dedicated software that comes with the unit. C7557 supports all models of Hamamatsu multichannel detector heads designed to use a CCD image sensor or InGaAs image sensor. C7557 provides various useful functions (see page 2) that efficiently collect sample data during basic operation. C7557 controller includes a driver/amplifier circuit for operating a multichannel detector head, a power supply circuit, a temperature stabilizer circuit, an A/D conversion circuit that converts analog signals from the detector head into digital signals, and a data interface. The software supplied with C7557 allows easy control of the multichannel detector head and data acquisition through the SCSI interface. This software runs on Windows 95/98/Me, by simple operation from the menu neatly displayed on the screen. This software is available with different kinds of DLL\*1 to help you develop your own software programs under various developmental environments.

\*1: DLL is one of useful functions the Windows 95/98/Me. It is a library that can freely start up from application software or execute function procedure. Software development can be made easier with DLL. To use DLL, see the operation manual that comes with the unit.

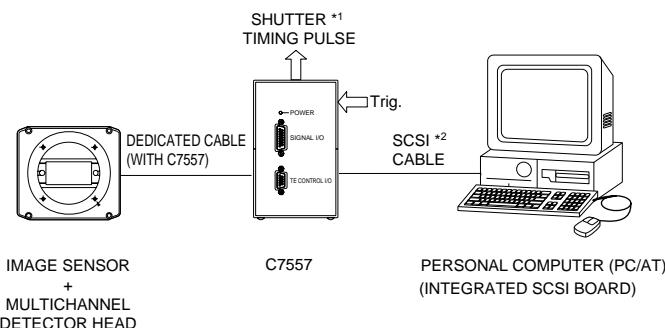

## Features

- Designed for basic control in multichannel photometry
- Easy to control multichannel detector head and data acquisition
- Supports all models of Hamamatsu multichannel detector heads (CCD, InGaAs)
- Software with different kind of DLL is supplied with C7557
- Compact configuration

## Applications

- Control of multichannel detector head and data acquisition

### ■ Connections to detector head and PC

\*1: Shutter, etc. are not available.

\*2: SCSI cable and SCSI board (card) are not supplied with C7557.

KACCC0077EB

**SOLID STATE DIVISION**

**■ Functions**

| Parameter                            | Specification  |
|--------------------------------------|--|
| Data transfer                        | Transfers data stored in memory to computer.   |
| Exposure time setting                | 1 ms to 65535 ms (1 ms steps)<br>Minimum exposure time depends on sensor detection level.  |
| External sync signal input           | BNC connector input  |
| Trigger mode                         | Internal sync, external sync   |
| Trigger polarity                     | Trigger polarity selectable for external sync  |
| Shutter timing pulse output          | Outputs timing signal for operating external shutter or external light source via BNC connector.<br>Pulse width, delay and polarity settings are possible. |
| Video signal output                  | Outputs video signal sent from head, via BNC connector.  |
| Video sync signal output             | Outputs sync signal used to observe video signal output with external device such as oscilloscope, via BNC connector.                                      |
| Amplifier gain                       | 1/2, 1, 2, 5, 10, 20, 50, 100  |
| Detector head                        | Refer to ■SELECTION GUIDE FOR IMAGE SENSOR AND DETECTOR HEAD COMBINATION   |
| Number of detector channels          |  |
| Detector cooling control             | Cooling start and stop   |
| Detector cooling temperature readout | Converts analog temperature data from detector into digital signal, and transfers it to computer<br>(10 bit A/D conversion)                                |

**■ Specifications****● AD converter**

| Parameter            | CCD area image sensor | InGaAs linear image sensor |         |  |  |
|----------------------|-----------------------|----------------------------|---------|--|--|
| AD converter         | 16 bits               | 12 bits                    | 16 bits |  |  |
| Conversion speed     | 4 µs/ch               | 2 µs/ch                    | 8 µs/ch |  |  |
| Input range          | 0 to 10 V             | -10 to +10 V               |         |  |  |
| Input method         | Differential input    |                            |         |  |  |
| Nonlinear linearity  | 0.1 %FS               |                            |         |  |  |
| AD conversion signal | External input        |                            |         |  |  |

**● Controller**

| Parameter | Specification               |
|-----------|-----------------------------|
| Clock     | 20 MHz                      |
| Memory    | 4 MB (1024 ch × 2048 lines) |
| Interface | SCSI                        |

**● Equipment**

| Parameter             | Specification                      |
|-----------------------|------------------------------------|
| Interface             | SCSI: 50-pin half pitch connector  |
| Power supply          | AC100 to 240 V ± 10 %, 50 to 60 Hz |
| Power consumption     | 33 W Max.                          |
| Outline dimension     | 92 (W) × 150 (H) × 225.8 (D) mm    |
| Operating temperature | 0 to 40 °C                         |
| Storage temperature   | -10 to 50 °C                       |
| Weight                | Approx. 2.9 kg                     |

**● SCSI interface**

SCSI boards manufactured by Adaptec, especially types below, are recommended.

PCI bus: AHA-2940AU, 2940U2W, 2940UW, SCSI CARD 2930U, 19160, PCMCIA: APA-1460A, 1480

**● Software**

| Parameter        | Specification                    |
|------------------|----------------------------------|
| Compatible OS *3 | Windows95, Windows98, Windows ME |

\*3: This software may be run on Windows 2000, NT or XP with a simple task. For information on how to do this, please consult with our sales office.

**● Others**

BNC cable is separately required when making measurements by external sync, controlling an external shutter or external light source, or measuring the video signal with an external device.

## ■ Operation method

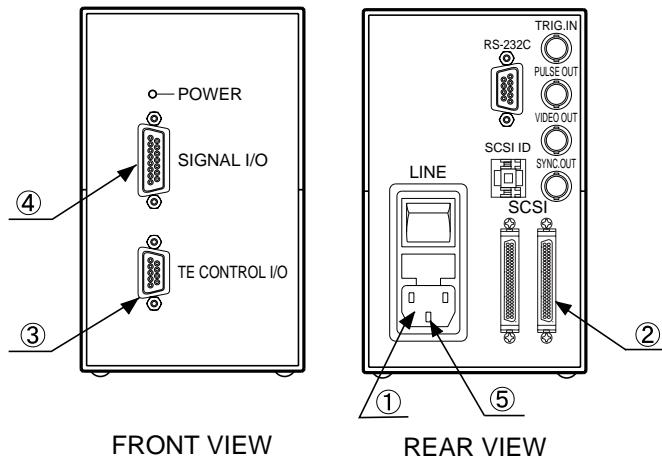

1. Make connections as indicated in ① to ⑤.

- |                      |   |
|----------------------|---|
| ① LINE               | Connect to the power cable.   |
| ② SCSI <sup>*4</sup> | Connect to a computer through the SCSI interface cable. When C7557 is the last unit in the SCSI chain, plug a terminator into another SCSI port on C7557. |
| ③ TE CONTROL I/O     | Connect to the "TE CONTROL I/O" terminal on the detector head.  |
| ④ SIGNAL I/O         | Connect to the "I/O SIGNAL" terminal on the detector head.  |
| ⑤ GND                | When a 2-pin AC plug is used with the power cable, use this GND connector to ground the unit.   |

2. When all the connections are complete, turn on the power to C7557.

3. Install the dedicated software. (For details on the dedicated software, refer to the operation manual supplied in the package.)

\*4: A terminator must be plugged into the last unit in the SCSI chain.

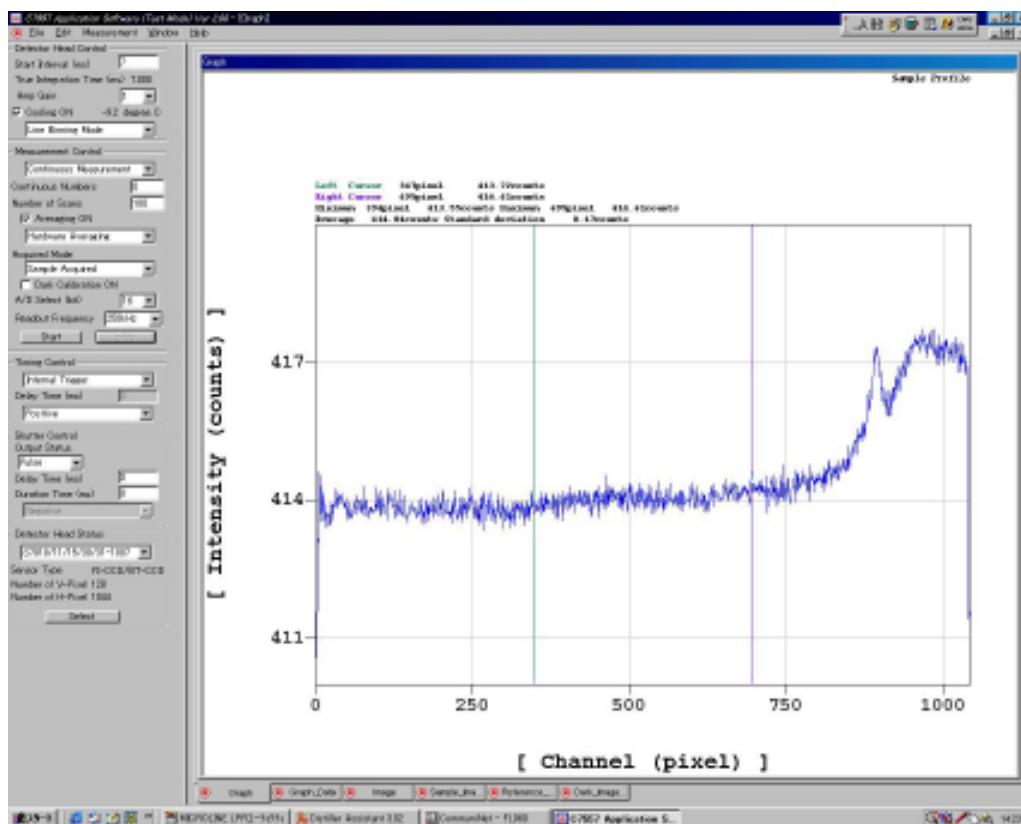

## ■ Software functions

The figure below shows the main screen (CCD image sensor: line binning) while running on Windows 95/98/Me.

From the main screen menu, you can easily set operating conditions for the multichannel detector head and data acquisition parameters. The measurement screen displayed with this software shows the image sensor channel along the horizontal axis and the output count along the vertical axis. The main screen menu also allows you to select the desired operation mode: line binning or area scanning (for CCD image sensors), or line scanning (for InGaAs image sensors).

The parameters that can be set on the main screen are as follows:

- Exposure time
- Amplifier gain
- Cooling control
- Number of integrations
- Dark correction
- Type of measurement data
- Start or end of measurement
- Detector head status
- Trigger mode
- Trigger polarity
- Shutter timing pulse width
- Shutter timing pulse delay
- Shutter timing pulse polarity

## Multichannel detector head controller C7557

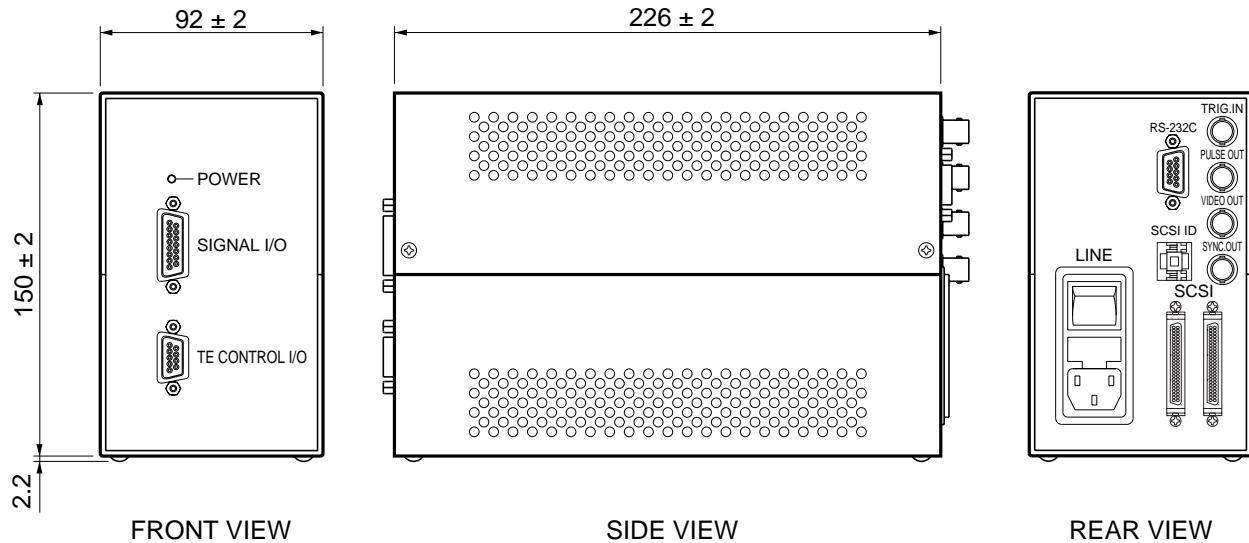

### ■ Selection guide for image sensor and detector head combination

| Suitable multichannel detector head | Image sensor |                        |                               |   |
|-------------------------------------|--------------|------------------------|-------------------------------|---|
| Type No.                            | Type No.     | Number of active pixel | Active area [mm (H) × mm (V)] | Types of sensor                               |
| C7020                               | S7010-0906   | 512 × 60               | 12.288 × 1.440                | Front-illuminated<br>CCD area<br>image sensor |
|                                     | S7010-0907   | 512 × 124              | 12.288 × 2.976                |   |
|                                     | S7010-0908   | 512 × 252              | 12.288 × 6.048                |   |
|                                     | S7010-1006   | 1024 × 60              | 24.576 × 1.440                |   |
|                                     | S7010-1007   | 1024 × 124             | 24.576 × 2.976                |   |
|                                     | S7010-1008   | 1024 × 252             | 24.576 × 6.048                |   |
| C7021                               | S7011-0906   | 512 × 60               | 12.288 × 1.440                | Front-illuminated<br>CCD area<br>image sensor |
|                                     | S7011-0907   | 512 × 124              | 12.288 × 2.976                |   |
|                                     | S7011-1006   | 1024 × 60              | 24.576 × 1.440                |   |
|                                     | S7011-1007   | 1024 × 124             | 24.576 × 2.976                |   |
| C7025                               | S7015-0908   | 512 × 252              | 12.288 × 6.048                | Back-thinned *5<br>CCD area<br>image sensor   |
|                                     | S7015-1008   | 1024 × 252             | 24.576 × 6.048                |   |

|                                     | G9208-256W   | 256                    | 12.8 × 0.25                   |   |

\*5: C7557 can be used with following back-thinned CCD area image sensors and multichannel detector heads

- Two-stage TE-cooled CCD S7032 series/multichannel detector head C7042
- Two-stage TE-cooled CCD S7035 series/multichannel detector head C7045
- Two-stage TE-cooled CCD S7172-0909/multichannel detector head C7182

■ Dimensional outline (unit: mm)

KACCA0061EC

■ Configuration

|                                      |   |
|--------------------------------------|---|
| •C7557 main unit                     | 1 |
| •SCSI terminator                     | 1 |
| •Spare fuse (1.6 A) *                | 1 |
| •Detector head connection cables     | 2 |
| •AC cable                            | 1 |
| •CD-ROM (Software, Operation manual) | 1 |

\* Contained in the holder just above the AC cable connector on the C7557 rear panel.

Note: SCSI cable and SCSI board (card) are not supplied with C7557.
