### FEATURES

- Guaranteed Power Dissipation 50 Watts @ 80°C Case
- Guaranteed input-output differential: + 2.6 Volts
- Low noise, band gap reference
- Remote sense capability
- Sample power cycled burn-in
- Guaranteed thermal resistance junction to case: 0.9°C/W
- TO-3 package available
- Grounded case

### DESCRIPTION

The LAS 1900 Series voltage regulators are monolithic integrated circuits designed for use in applications requiring a well regulated positive output voltage. Outstanding features include full power usage up to 5.0 amperes of load current, internal current limiting, thermal shutdown, and safe area protection on the chip, providing protection of the series pass Darlington, under most operating conditions.

A low-noise, temperature stable band gap reference is the key design factor insuring excellent temperature regulation of the LAS 1900 Series. This, coupled to a very low output impedance, insures superior load regulation.

The LAS 19U, a four terminal, adjustable regulator is available with an output range from + 4 to + 30 Volts, providing remote sense capability with a single potentiometer.

### ABSOLUTE MAXIMUM RATINGS

| PARAMETER                                                   | SYMBOL        | MINIMUM | MAXIMUM                           | UNITS   |
|-------------------------------------------------------------|---------------|---------|-----------------------------------|---------|
| Input Voltage                                               | $V_{IN}$      |         | 30(35) <sup>(1)(2)</sup>          | Volts   |
| Power Dissipation                                           | $P_D$         |         | Internally Limited <sup>(3)</sup> |         |
| Thermal Resistance Junction To Case                         | $\theta_{JC}$ |         | 0.9                               | °C/Watt |
| Operating Junction Temperature Range<br>LAS 1900<br>LAS 19U | $T_J$         | -55     | 150                               | °C      |
| Storage Temperature Range                                   | $T_{STG}$     | -65     | 150                               | °C      |
| Lead Temperature (Soldering, 60 Seconds Time Limit)         | $T_{LEAD}$    |         | 300                               | °C      |

<sup>(1)</sup> Short circuit protection is only assured to  $V_{IN}$  max. Value of 30V applies to  $V_O$  of +5V to +12V. Value of 35V applies to  $V_O$  of 15V and LAS 19U.

<sup>(2)</sup> In case of short circuit with input-output voltages approaching  $V_{IN}$  max, regulator may require the removal of the input voltage to restart.

<sup>(3)</sup> For operation above 80°C  $T_{CASE}$ , derate @ 1.111 watt/°C.

(<sup>1</sup>) Nominal output voltages are specified under Device Selection Guide.

(<sup>2</sup>) Low duty cycle pulse testing with Kelvin connections required. Die temperature changes must be accounted for separately.

(<sup>3</sup>) BW = 10Hz - 100KHz

(<sup>4</sup>) Ripple attenuation is specified for a 1Vrms, 120Hz, input ripple.

Ripple attenuation is minimum of 60 dB at 5V output and is 1 dB less for each volt increase in the output voltage.

(<sup>5</sup>)  $V_O = V_C (1 + R1/R2)$

R1 = Resistance from output to control

R2 = Resistance from control to common
