

Features

General Description

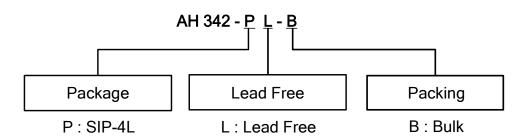

- Digital dual complementary sink/source outputs
- Reverse Voltage Polarity protection for full supply
- High output current capability
- Low profile packages: SIP-4L
- Lead Free Package: SIP-4L
- Lead Free Finish/RoHS Compliant (Note 1)

The AH342 is a bipolar latching hall IC with a pair of complementary push/pull outputs. A dual hall element is used to offset stress induced noise and drift. The robust outputs are capable of sourcing up to 7.4mA and sinking up to 4.4mA. The device contains inherent reverse polarity protection up to the full power supply range.

Applications

- Conveyors
- Motor control
- Power sensing
- Linear or rotary motion detection
- RPM sensing

Absolute Maximum Ratings (Note 3)

| Symbol | Characteristics | Conditions | Rating | Unit |
|------------------|--------------------------------------|---|------------|------|
| V _{CC} | Supply voltage | -40°C to 125°C | ±28 | V |
| V _{OUT} | Voltage Externally Applied to Output | -40°C to 125°C | -1.2 to 5 | V |
| lc | Output Current | | ±10 | mΑ |
| В | Magnetic Flux density | No limit; the circuit cannot be damaged by magnetic overdrive | Unlimit | ed |
| T _{ST} | Storage Temperature | No power applied | -40 to 150 | °C |

Notes: 3. Absolute maximum ratings are the extreme limits that the device will withstand without damage to the device. However, the electrical and magnetic characteristics are not guaranteed as the maximum limits (above recommended operating conditions) are approached nor will the device necessarily operate at absolute maximum rating.

Notes: 5. All the parameters are tested under the 25°C only. The operation temperature (-40°C to 125°C) is guaranteed by design, it is typical value.
6. The magnetic field strength (gauss) required to cause the switch to change state (operate and release) will be as specified in the magnetic characteristics. To test the switch against the specified magnetic characteristics the switch must be placed in a uniform magnetic field.
