

## 100355

### Low Power Quad Multiplexer/Latch

#### General Description

The 100355 contains four transparent latches, each of which can accept and store data from two sources. When both Enable ( $\bar{E}_n$ ) inputs are LOW, the data that appears at an output is controlled by the Select ( $S_n$ ) inputs, as shown in the Operating Mode table. In addition to routing data from either  $D_0$  or  $D_1$ , the Select inputs can force the outputs LOW for the case where the latch is transparent (both Enables are LOW) and can steer a HIGH signal from either  $D_0$  or  $D_1$  to an output. The Select inputs can be tied together for applications requiring only that data be steered from either  $D_0$  or  $D_1$ . A positive-going signal on either Enable input latches the out-

puts. A HIGH signal on the Master Reset (MR) input overrides all the other inputs and forces the Q outputs LOW. All inputs have 50 k $\Omega$  pulldown resistors.

#### Features

- Greater than 40% power reduction of the 100155
- 2000V ESD protection
- Pin/function compatible with 100155
- Voltage compensated operating range = -4.2V to -5.7V
- Available to MIL-STD-883
- Available to industrial grade temperature range

#### Ordering Code:

#### Logic Symbol

| Pin Names              | Description                |
|------------------------|----------------------------|
| $\bar{E}_1, \bar{E}_2$ | Enable Inputs (Active LOW) |
| $\bar{S}_0, S_1$       | Select Inputs              |
| MR                     | Master Reset               |
| $D_{na}-D_{nd}$        | Data Inputs                |
| $Q_a-Q_d$              | Data Outputs               |
| $\bar{Q}_a-\bar{Q}_d$  | Complementary Data Outputs |

## Absolute Maximum Ratings (Note 2)

Above which the useful life may be impaired.

|                                        |                   |
|----------------------------------------|-------------------|
| Storage Temperature ( $T_{STG}$ )      | –65°C to +150°C   |
| Maximum Junction Temperature ( $T_J$ ) |                   |
| Ceramic                                | +175°C            |
| Plastic                                | +150°C            |
| $V_{EE}$ Pin Potential to Ground Pin   | –7.0V to +0.5V    |
| Input Voltage (DC)                     | $V_{EE}$ to +0.5V |
| Output Current (DC Output HIGH)        | –50 mA            |
| ESD (Note 3)                           | ≥2000V            |

## Recommended Operating Conditions

|                             |                 |
|-----------------------------|-----------------|
| Case Temperature ( $T_C$ )  |                 |
| Commercial                  | 0°C to +85°C    |
| Industrial                  | –40°C to +85°C  |
| Military                    | –55°C to +125°C |
| Supply Voltage ( $V_{EE}$ ) | –5.7V to –4.2V  |

**Note 2:** Absolute maximum ratings are those values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

**Note 3:** ESD testing conforms to MIL-STD-883, Method 3015.

## Commercial Version DC Electrical Characteristics

$V_{EE} = -4.2V$  to  $-5.7V$ ,  $V_{CC} = V_{CCA} = GND$ ,  $T_C = 0^\circ C$  to  $+85^\circ C$  (Note 4)

| Symbol    | Parameter                                                                                 | Min   | Typ   | Max                      | Units | Conditions                                                                   |

| $I_{EE}$  | Power Supply Current                                                                      | –87   |       | –40                      | mA    | Inputs Open                                                                  |

**Note 4:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guard banding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

**Note 5:** Output-to-Output Skew is defined as the absolute value of the difference between the actual propagation delay for any outputs within the same packaged device. The specifications apply to any outputs switching in the same direction either HIGH to LOW ( $t_{OSHL}$ ), or LOW to HIGH ( $t_{OSLH}$ ), or in opposite directions both HL and LH ( $t_{OST}$ ). Parameters  $t_{OST}$  and tps guaranteed by design.

## Industrial Version PCC DC Electrical Characteristics

**Note 6:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guard banding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

## Industrial Version PCC AC Electrical Characteristics

| I <sub>EE</sub> | Power Supply Current                                                                                                               | −95   | −32   | mA    | −55°C to +125°C | Inputs Open                                                         |                              | (Notes 7, 8, 9)     |

**Note 7:** F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals  $-55^\circ C$ ), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

**Note 8:** Screen tested 100% on each device at  $-55^\circ C$ ,  $+25^\circ C$ , and  $+125^\circ C$  Temp., Subgroups 1, 2, 3, 7, and 8.

**Note 9:** Sample tested (Method 5005, Table 1) on each Mfg. lot at  $+25^\circ C$ ,  $+125^\circ C$ , and  $-55^\circ C$  Temp., Subgroups 1, 2, 3, 7, and 8.

**Note 10:** Guaranteed by applying specified input condition and testing  $V_{OH}/V_{OL}$ .

## Military Version AC Electrical Characteristics

$V_{EE} = -4.2V$  to  $-5.7V$ ,  $V_{CC} = V_{CCA} = GND$

**Note 11:** F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals  $-55^\circ C$ ), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

**Note 12:** Screen tested 100% on each device at  $+25^\circ C$ , Temperature only, Subgroup A9.

**Note 13:** Sample tested (Method 5005, Table 1) on each Mfg. lot at  $+25^\circ$ , Subgroup A9, and at  $+125^\circ C$ , and  $-55^\circ C$  Temp., Subgroups A10 & A11.

**Note 14:** Not tested at  $+25^\circ C$ ,  $+125^\circ C$  and  $-55^\circ C$  Temperature (design characterization data).

## Test Circuit

DS010147-6

### Notes:

$V_{CC}$ ,  $V_{CCA}$  = +2V,  $V_{EE}$  = -2.5V

$L1$  and  $L2$  = equal length 50Ω impedance lines

$R_T$  = 50Ω terminator internal to scope

Decoupling 0.1 μF from GND to  $V_{CC}$  and  $V_{EE}$

All unused outputs are loaded with 50Ω to GND

$C_L$  = Fixture and stray capacitance ≤ 3 pF

Pin numbers shown are for flatpak; for DIP see logic symbol

FIGURE 1. AC Test Circuit  
(Using Quad Cerpak)

## Switching Waveforms

DS010147-7

FIGURE 2. Enable Timing

## Switching Waveforms (Continued)

FIGURE 3. Reset Timing

### Notes:

$t_s$  is the minimum time before the transition of the enable that information must be present at the data input.

$t_h$  is the minimum time after the transition of the enable that information must remain unchanged at the data input.

FIGURE 4. Data Setup and Hold Times

## Ordering Information

The device number is used to form part of a simplified purchasing code where the package type and temperature range are defined as follows:

DS010147-11

## Physical Dimensions inches (millimeters) unless otherwise noted

**24-Lead Ceramic Dual-In-Line Package (D)**  
**Package Number J24E**

**24-Lead Plastic Dual-In-Line Package (P)**  
**Package Number N24E**

**Physical Dimensions** inches (millimeters) unless otherwise noted (Continued)

W24B (REV D)

**24-Lead Ceramic Flatpak (F)**  
**Package Number W24C**

V28A (REV C)

**28-Lead Plastic Chip Carrier (Q)**  
**Package Number V28A**

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
