

NEW Digital Fiber Optic Sensor  
FS-V30 Series

**MEGA POWER**

Fiber Optic Sensors  
The New Standard in Simplicity

# MEGA-Power, MEGA-Easy & MEGA-Stable

KEYENCE has further improved the top selling FS fiber sensors.  
New features on the FS-V30 will help you to solve your sensing needs.

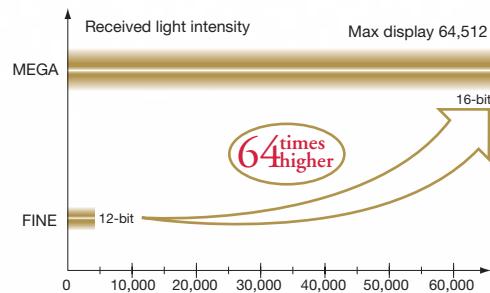

Digital Fiber Optic Sensors

# FS-V30

## World's most powerful beam

**64 times more powerful beam  
than conventional models**

Stable detection in harsh environments.  
Longer detecting distance with miniaturized fibers.

## World's first power booster switch

### Easy power control

The highest power setting can be selected with a DIP switch.

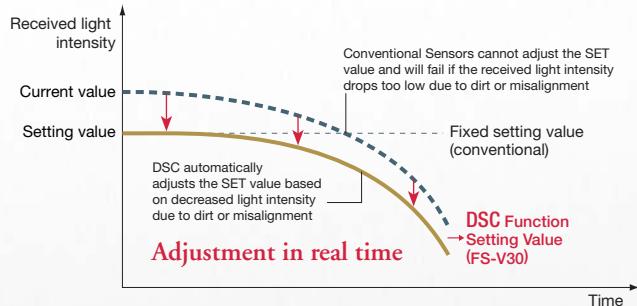

3

## World's first automatic setting value tracking function

### Not affected by environmental changes over time

Equipped with the DSC Function which adjusts the setting value as it tracks the current value in real time.

## Program memory

### Reload your application settings

Operators or users may accidentally change the settings on the FS. In this case, conventional models require resetting. The FS-V30 saves your settings into memory for fast recovery.

# Highly stable detection

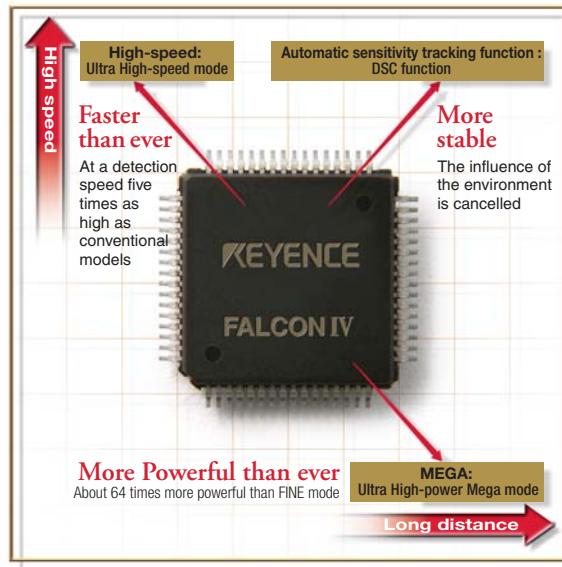

The improved ASIC significantly improves performance.

**KEYENCE has developed a special 16-bit CPU for fiber sensors**

## Powered by the FALCON IV

**Dynamic range 64 times higher than conventional models.**

Introducing the FALCON IV, our latest upgrade in a revolutionary line of custom CPU's designed by KEYENCE specifically for our fiber optic sensors. The FALCON IV is equipped to simultaneously control several functions: high-speed computing of received light intensity, adjusting the setting value in real time and dual digital display. Compared with conventional CPU's which operate sequentially, the FALCON IV calculates all information in parallel. This achieves higher performance and speed.

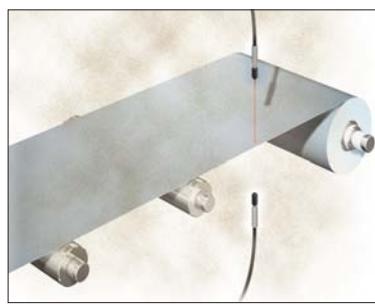

## Automatic sensitivity tracking function [WORLD's BEST]

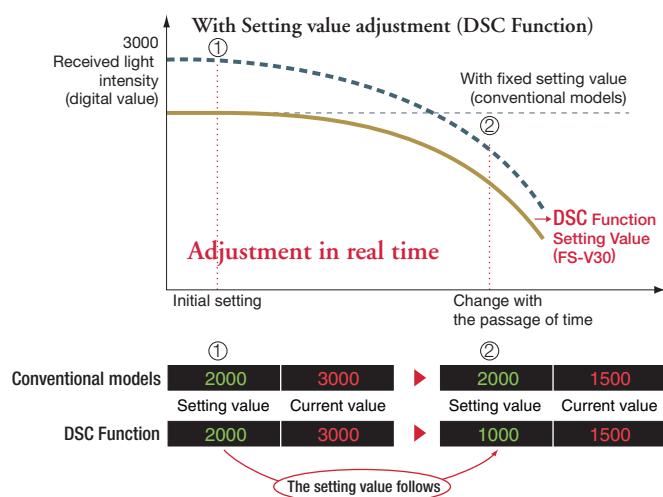

**Automatically adjust the setting value.**

The DSC (Dynamic Stability Control) Function automatically adjusts the threshold according to received light intensity variations due to dust or dirt in real time. This function allows maintenance free operation over extended periods of time, saving time and money.

Sensitivity is configured by simply pressing the SET button. The sensitivity can be set as a percentage (+/-99%) of the received light intensity.

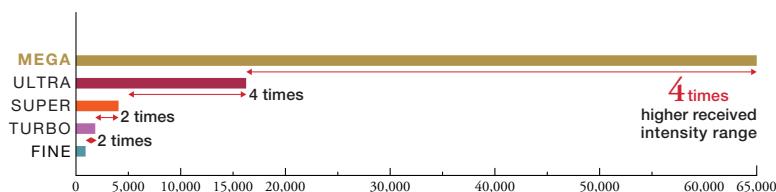

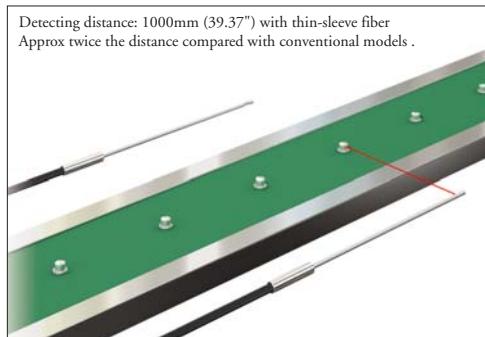

Detecting a thin target using thrubeam type

## Highest power [WORLD's BEST]

### More reliable detection in harsh environments. Longer detection distance with thin-sleeve fibers.

The FALCON IV chip provides the highest power - MEGA mode. This power is essential for reliable detection in harsh environments. It also increases the detection range of miniaturized fibers.

Detecting the position of targets using a thin fiber.

MAXIMUM DISPLAY

DSC E 64512

#### Set button

Automatic calibration setting.

#### Highly visible dual digital display

The dual screen differentiates the size of the setting value and current value for high visibility.

#### Digital trim pot

More convenient than ever while maintaining an easy single button operation.

#### Mode button

Monitor and operation mode selection.

#### Output selection button

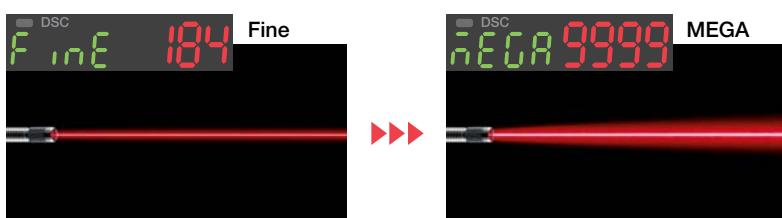

Light-ON or Dark-ON output selection.

## Equipped with a Power booster switch

### Power selection without a complicated procedure.

Conventional models require complicated menu operations to select the power settings. Power settings can be adjusted using a single DIP switch.

The illustration shows simulated light beams

# New Sensor Options

## Wide variety

Various amplifier designs applicable to any job.

1-output [NEW]  
M8 connector

FS-V31C(P)  
FS-V32C(P)

2-output [NEW]  
M8 connector

FS-V33C(P)  
FS-V34C(P)

Cable [NEW]

FS-V31(P)  
FS-V32(P)

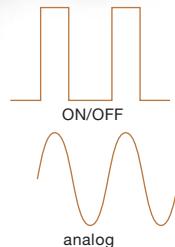

Cable [NEW]

FS-V33(P)  
FS-V34(P)

Analog output [NEW]

FS-V31M

**2-output type** Output 1 is used for detection. Output 2 can be selected to output when a counter, alarm or limit has been reached.

**Analog output type** Outputs 1 to 5 V according to the detection quantity (digital display). It can be used for a wide range of applications such as position control or multi-level detection.

**M8 connector type** is also available.

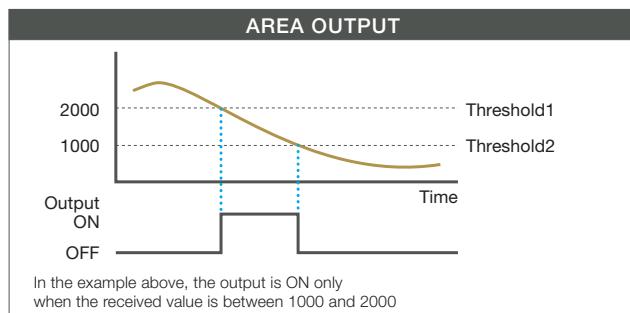

## Area output

### Ignore background interference.

Set an upper and lower detection level.

The FS-V30 will output when the received signal is between the setting limits.

## Preventing operational errors

### Password lock function

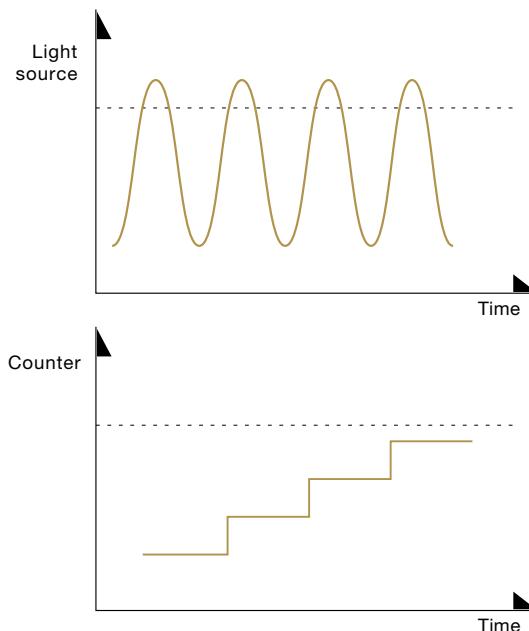

With the Password Lock function, only authorized operators can modify the settings on the FS-V30. Since the Password Levels are selectable, operation errors can be prevented.

	Threshold value settings	MENU Settings	Power modes/ Light-on/Dark-on
LEVEL 1	Locked	Locked	Locked
LEVEL 2	Unlocked	Locked	Locked
LEVEL 3	Unlocked	Unlocked	Locked

## Counter mode

### Simultaneous count of workpieces

The Counter function can easily count work pieces without the need for external counters or a PLC.

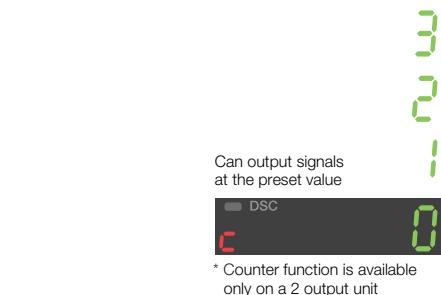

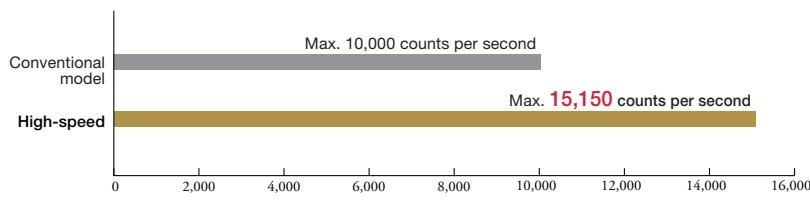

## Highest speed [WORLD's BEST]

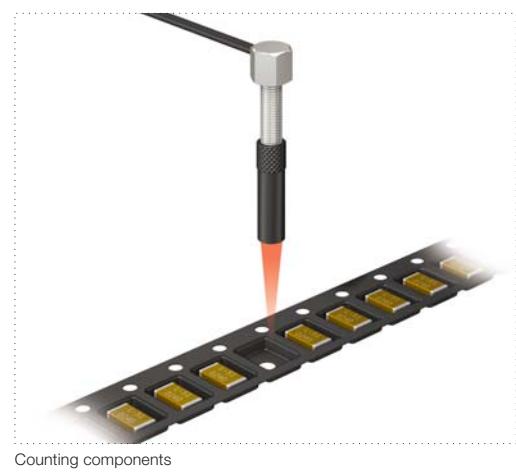

### Amazing 33 µs response speed!

33 µs response allows the FS-V30 to detect up to 15,150 workpieces per second. In addition, minute targets can be set on-the-fly with simple, one touch calibration.

\*Conventional models count max. 10,000 targets per second even in high-speed mode

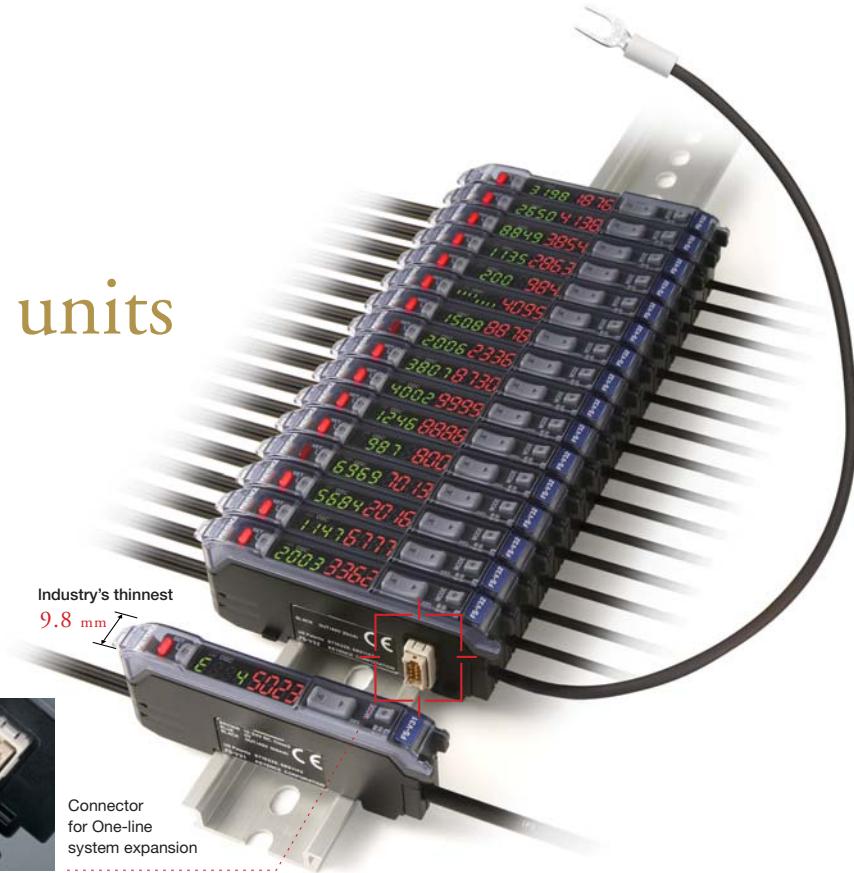

\* Counter function is available only on a 2 output unit

# Reliable expansion units

KEYENCE's original 1-Line system is featured on the FS-V30 Series.

## [ 1-Line system ]

Power is connected through the side connector. Expansion units have a single output wire.

### 1 Shock absorber function incorporated

The connector is provided with a spring mechanism for shock absorption.

### 2 Dust cover provided

The dust cover prevents the exposure of the connector pins.

Industry's thinnest

9.8 mm

Connector  
for One-line  
system expansion

## Interference prevention function up to 16 units

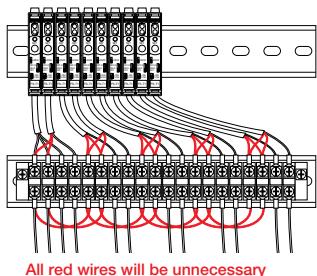

### Reliable detection with stable interference prevention.

The FS-V30 electrically delays the timing of light emission between connected units. Up to 16 connected units can utilize the interference prevention function providing stable system performance.

MODE	FinE	Turb	SuPr	ULtr	MEGA
Std (Standard)	4 units		8 units		
dobl (Double)	8 units		16 units		

### Wire saving connection method (when 10 units are used)

#### Conventional method

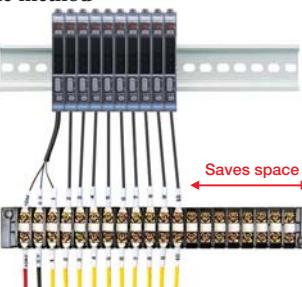

Number of terminal blocks : 20

Number of wires : 58

Number of jumper wires : 8

Required working time : 120 min.

#### Single-line method

Number of terminal blocks : 12

Number of wires : 24

Number of jumper wires : 0

Required working time : 50 min.

## Combination with other sensor models is possible

### A full line of models showing proven results and high reliability.

It is possible to combine the FS-V30 sensors with other KEYENCE 1-line sensors. Fiber, Color, Laser, Photoelectric and Proximity sensors are all available in the 1-line system.

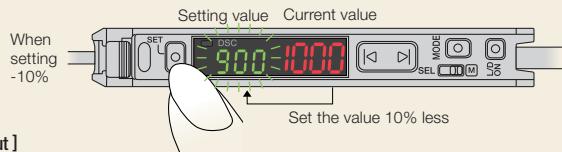

From left to right

- FS-V31: Fiber optic sensor
- CZ-V22A: RGB digital color sensor
- LV-12SA: Digital laser sensor
- PS-T2: Photoelectric sensor with separate amplifier
- ES-M2: Long-distance separate amplifier proximity sensor

# Adjustment/external setting

## %Tuning

You can set the sensitivity with just the touch of a button. When light intensity values fluctuate due to dust or misalignment, you can adjust the sensitivity by a fixed percentage. (+/-99%)

### [ External Input ]

Small differences in received light quantity can be compensated via external input. This ability provides continuous and stable detection.

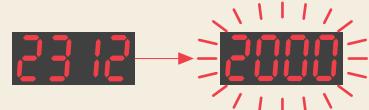

### Shift Function

Adjust the current received light intensity to "0". For example, you can zero the received light intensity from a reflective sensor so that the background will display "0". This function is effective when there are only small differences between targets received light intensity.

## Display scaling

You can adjust the light intensity on the display. In this way, each amplifier can display the same value for the same target. (1 output type only)

## Fiber transmission stop input

When the external input is activated, LED transmission will stop on the Main unit and all connected Sub units.

[Example of use] •Troubleshooting at sensor startup  
•Preventing interference with other sensors

## External tuning

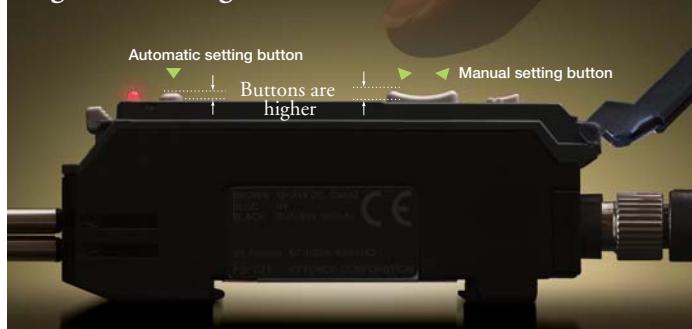

Sensitivity can also be externally set by a PLC. The external input works the same as the SET button.

# Improved operation

## Ergonomic button layout

The amplifier was designed for ease of use, and error prevention. The SET value and the Current value on the display are different heights and colors, improving visibility. The SET button and manual buttons are separated to prevent operator error. In addition, the SET button and manual buttons are higher and larger than the other buttons, for easy setup.

## Ergonomic Design

# Display customizing Function

## Only the main display is active by default.

Conventional models can be easily switched to unwanted display modes by accident, confusing operators.

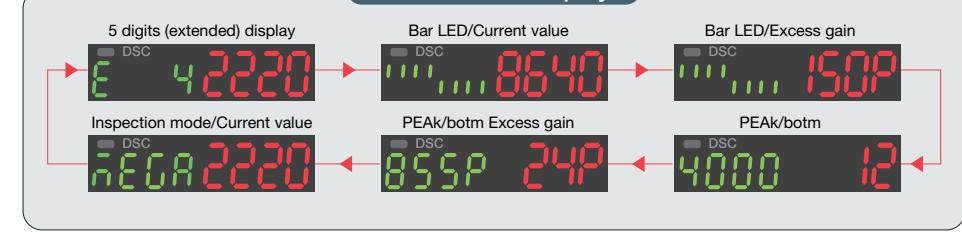

The FS-V30 will only display the Setting Value and the Current Value by default. If operators prefer to display an alternate format, such as Bar LED's, they can select from 6 additional options in the menu.

### Standard main display

Setting value      Current value  
DSC 722 1975

Display will not change  
when a button is pressed by accident

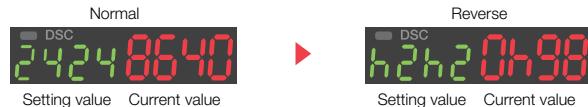

### Six selectable displays

# Useful functions to cope with various applications

## Inverted display

Depending on the mounting direction, some displays may be inverted. The digital display on the FS-V30 can be inverted, providing easy to read displays.

## Power saving

### POWER SAVING FUNCTION

**The lowest power consumption in its class thanks to the MEGA FALCON chip.**

The display can be turned off to reduce power consumption

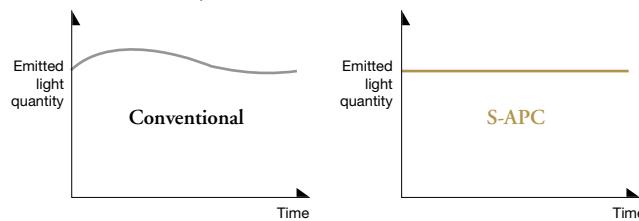

## Harsh environments/Changes over time

### S-APC MODE + 4-ELEMENT LED

**The ultimate in long term stability.**

The selectable S-APC function maintains a constant light level over time. The 4-element LED prevents diode deterioration over an extended period of time. Together, these functions make the FS-V30 Series the easy choice for long-term, maintenance-free operation.

### EDGE INSPECTION MODE

**Unaffected by dirt or temperature change.**

This mode ignores slight variations of light intensity by dirt or temperature, and detects only the targets. It can detect slight differences of light intensity without readjustment of the sensitivity.

#### [Timer Function]

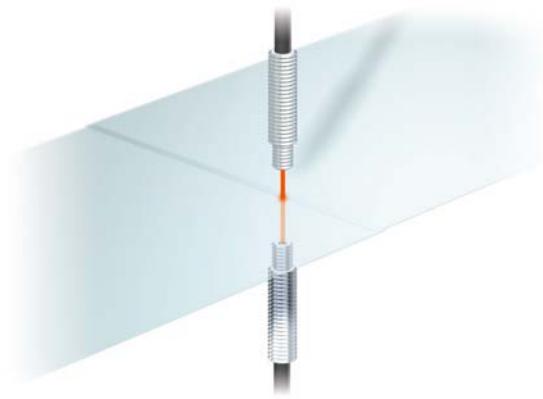

Equipped with 5 timer Functions. The Timer function can be individually set for each output 1and 2 from 0.1 ms to 9999 ms.

- ON-delay
- OFF-delay
- One-shot
- ON-delay with OFF-delay
- ON-delay with One-shot

## Preventing saturation

### ATTENUATE FUNCTION

In situations where fiber units have to be mounted in close proximity to a highly reflective background, the amplifier may saturate. The selectable attenuation function adjusts transmission intensity, allowing the FS-V30 Series to be used in close proximity (enabled) or from long distance (disabled).

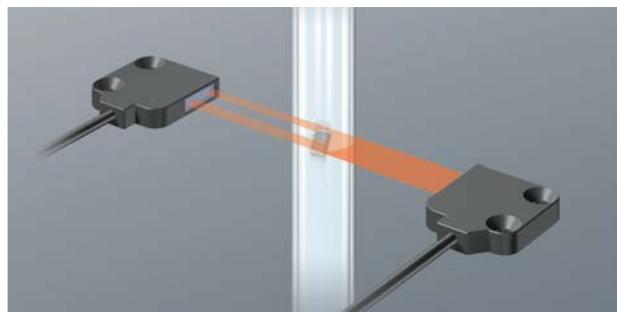

# Simple sensitivity settings

## FULL AUTOMATIC CALIBRATION

### No need to stop targets

When detecting falling or minute targets, it is very difficult to make sensitivity adjustments to manual fiber-optic sensors. Fully automatic calibration is unique to digital sensors. A suitable sensitivity is set by pressing the SET button while the target passes through the sensitizing area.

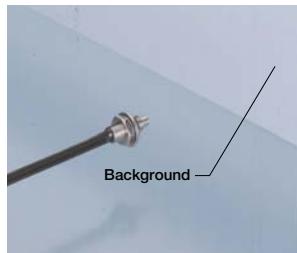

Detecting dropping targets

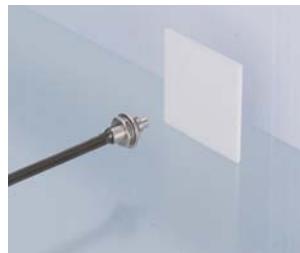

## MAXIMUM SENSITIVITY SETTING

### Ignore backgrounds

The sensitivity of the FS-V30 can be set to the maximum level to ignore background surfaces. This feature also makes it possible to detect targets while suppressing the influence of dust.

Background is not detected

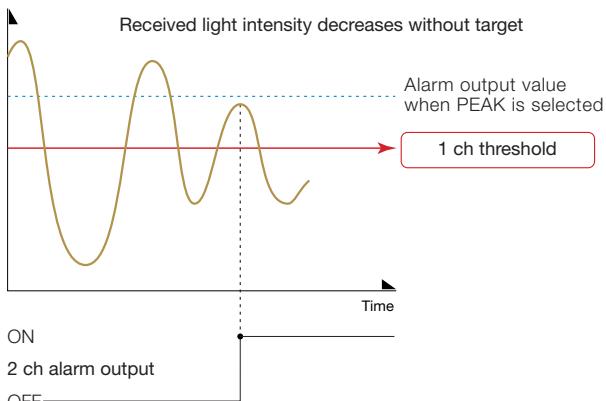

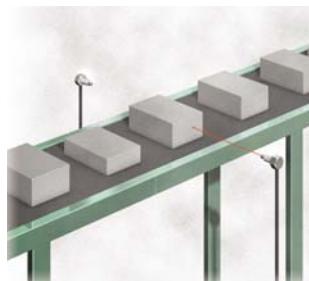

Sensor turns ON when the target enters the sensing area

# Application modes for the 2 output type sensors

11

## LIMIT MODE

When dust builds up on the sensor, the maximum light intensity will decrease. This mode sets an alarm value which can notify operators when the peak level of light intensity becomes too low.

## ALARM MODE

Conventional models display "END APC" when the APC Function ends. The FS-V30 sends an alarm signal while displaying "END APC". It can also be used as an adjustment alarm output when using the DSC Function.

## OTHER FS SENSORS

### TRIM-POT TYPE

#### FS-M Series

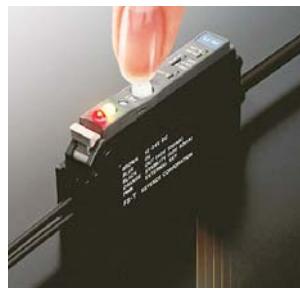

- Fine adjustment by using a multi-turn trimmer
- Ultra-high-speed response model FS-M1H is also available

### TEACHING TYPE

#### FS-T Series

- Fully-automatic calibration by pressing a button
- Green LED light source model FS-T1G is also available

# All fiber units are available for same-day shipment.

Our technical sales staff will select the best unit for you.

► 888 - KEYENCE

## Stainless steel armor

### Stainless jacket structure

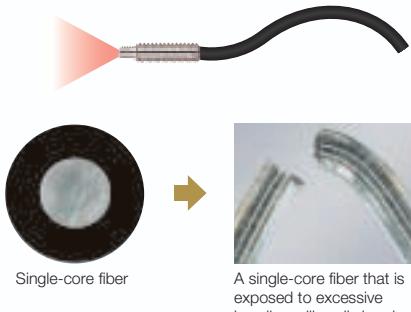

The outer braided shield adds strength against pulling, and the inner flexible spiral shield increases the strength against side impact.

## Tough Flex

### Conventional fiber

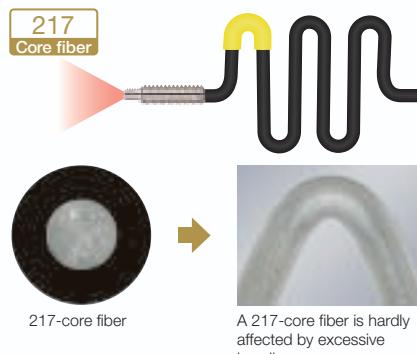

Minimum bending radius : R0.98" 25 mm

**KEYENCE ONLY**

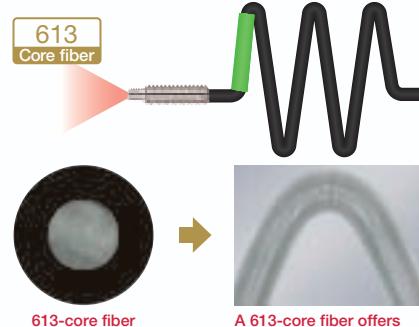

### ToughFlex fiber

Minimum bending radius : R0.08" 2 mm

### Super ToughFlex fiber

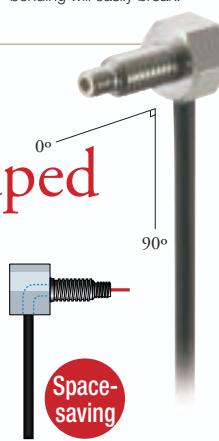

Minimum bending radius : R0.02" 0.5 mm

## Hex-shaped

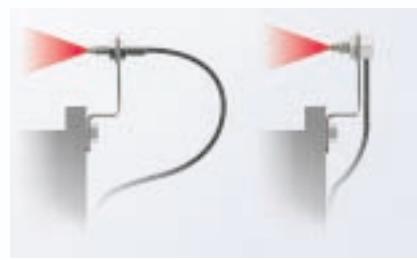

### Unbreakable fiber

The cable features a unbreakable fiber with the tip of the fiber bent at a right angle, like a periscope. This design requires far less space than conventional models. (Patent pending)

### Space-saving, trouble-free

All Hex-shaped fiber units allow neat cable routing and require less space for installation. This eliminates problems such as entangled cables.

### Easy mounting

Secure the unit with a single nut. Your current, standard fiber unit can be replaced without additional preparation or modification.

NOTE: Standard target: White matte paper (Reflective type only).

1. Each detecting distance in parentheses shows the data when the S-APC function is ON. S-APC will be always turned ON when the high-resolution or high-speed mode is selected.

2. When the R-2 (OP-95388) is used, MEGA (0.39" to 37.00" 10 to 940 mm)/ULTRA (0.39" to 29.50" 10 to 750 mm)/SURER (0.39" to 14.96" 10 to 380 mm)/TURBO (0.39" to 9.84" 10 to 250 mm)/FINE (0.39" to 4.92" 10 to 125 mm)

3. "141.73" 3600" is assumed as maximum because the fiber cable has the length of 6.6' 2 m.

## Specifications

Type	1-output with cable		1-output + 1-input with M8 connector		2-output + 1-input with cable		2-output with M8 connector		Monitor output	O-line									
Model	NPN	FS-V31	FS-V32	FS-V31C	FS-V32C	FS-V33	FS-V34	FS-V33C	FS-V34C	FS-V31M	FS-V30								
Main unit/Expansion unit	Main unit	Expansion unit	Main unit	Expansion unit	Main unit	Expansion unit	Main unit	Expansion unit	Main unit	Expansion unit									
Control output	1 output		1 output		2 outputs		2 outputs		1 output	N/A									
Monitor output (1 to 5 V)	N/A		N/A		N/A		N/A		1 output	N/A									
External input	N/A		1 input		1 input		N/A		N/A	N/A									
Connector	—		M8		—		M8		—	—									
Light source	Red, 4-element LED (Wavelength: 640 nm)																		
Response time	33 µs (HIGH SPEED)/250 µs (FINE)/500 µs (TURBO)/1 ms (SUPER TURBO)/4 ms (ULTRA TURBO)/16 ms (MEGA TURBO) [193 µs to 16.7 ms]																		
Output selection	LIGHT-ON/DARK-ON (switch-selectable)																		
Display indicator	Operation indicator: Red LED/Dual digital monitor: Dual 7-segment display, Preset Value (4-digit green LED indicator) and Current Value (4-digit red LED indicator) illuminated together. Current Value range: 0 to 64512; Excess gain: OP to 999P, Hold function: Possible to display both peak and bottom hold values.selectable from 5 variations Bar LED monitor: Excess gain displayed (85% to 115% in 7 steps), Scaling display																		
Detection mode	Light intensity (area detection possible, automatic sensitivity-tracking function provided)/ [Limited light intensity/Count check/Abnormality detection] <sup>1</sup>																		
Timer function	OFF-delay timer/ON-delay timer/One-shot timer/ON-delay timer + OFF-delay timer/ON-delay timer + One-shot timer, selectable Timer duration selectable: 0.1 ms to 9999 ms, Maximum error against the setting value: ±10% max.																		
Counter function	N/A		65,535 max. count		N/A		N/A		N/A										
Control output	NPN	NPN open-collector 40 V, 100 mA max. <sup>2</sup> (main unit only)/20 mA max. (when the expansion unit(s) is connected), Residual voltage: 1 V max.																	
	PNP	PNP open-collector 30 V, 100 mA max. <sup>2</sup> (main unit only)/20 mA max. (when the expansion unit(s) is connected), Residual voltage: 1 V max.																	
Monitor output	Voltage output: 1 to 5 V <sup>3</sup> , Load resistance: 10 kΩ min., Repeatability: ±0.5% of F.S., Response time: 1 ms (FS-V31M only)																		
External input	Non-voltage input (contact, solid-state), Input time: 2 ms (ON)/20 ms (OFF) min.																		
Unit expansion	Up to 16 expansion units can be connected (a total of 17 units). Note that the 2-output type should be counted as two units.																		
Power supply	12 to 24 VDC ±10%, ripple: 10% max. Class 2																		
Current consumption	Normal operation: 990 mW (at 24 V: 42 mA max, at 12 V: 83 mA max.) / Power-saving mode: 820 mW (at 24 V: 34 mA max, at 12 V: 68 mA max.)																		
Ambient illumination	Incandescent lamp: 20,000 lux max., Sunlight: 30,000 lux max.																		
Ambient temperature	14 to 131°F (-10 to 55°C), No condensation <sup>4</sup>																		
Relative humidity	35 to 85%, No condensation																		
Vibration	10 to 55 Hz, double amplitude: 0.06 <sup>5</sup> 1.5 mm, 2 hours each in the X, Y and Z axis																		
Shock	500 m/s <sup>2</sup> in X, Y, and Z directions, 3 times respectively																		
Housing	Polycarbonate																		
Size	1.19 <sup>6</sup> 30.3 mm (H) x 0.39 <sup>7</sup> 9.8 mm (W) x 2.83 <sup>8</sup> 71.8 mm (D)																		
Weight	Approx. 80 g	Approx. 45 g	Approx. 80 g	Approx. 45 g	Approx. 80 g	Approx. 70 g	Approx. 22 g	Approx. 22 g	Approx. 80 g	Approx. 25 g									
Accessory	N/A																		

1. Only 2-output type.

2. Total current of two outputs should be less than 100 mA.

3. Output range: 1 to 5 V for the display value 0 to 4096 at HIGH SPEED/FINE/TURBO mode.

4. If more than one unit is used together, the ambient temperature varies with the conditions below. Mount the units on the DIN rail with mounting brackets and check that the output current is 20 mA or less. 1 to 2 Units: 14 to 131°F (-10 to 55°C), 3 to 10 Units: 14 to 122°F (-10 to 50°C), 11 to 16 Units: 14 to 113°F (-10 to 45°C)

## Options

Type	Amplifier securing bracket (for main unit)	End unit (for expansion unit)	M8 connector cable (6.6' 2 m) <sup>1</sup>	M8 connector cable (33.0' 10 m) <sup>1</sup>
Model	OP-73880	OP-26751	OP-73864	OP-73865
Shape				

Note: To use the main unit only, use a DIN-rail or purchase the OP-73880 securing bracket. To add expansion units, use a DIN-rail and purchase the OP-26751 end unit, which should be placed at both ends of the connected units.

1. To use the FS-V31C(P)/V32C(P)/V33C(P)/V34C(P), purchase the OP-73864 or the OP-73865.

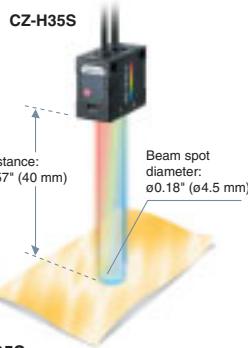

## OPTICAL SENSOR LINEUP

### SUPER RGB SENSOR

- 4 outputs x 2 ch
- UV Sensorhead available

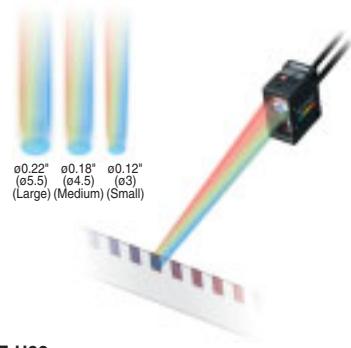

Powerful, RGB Sensor, Transparent Targets, 16 bit Accuracy, Color Differentiation

**CZ-H35S**  
Luster-cancel, Reflective Type

*Less affected by shape, position, inclination, and surface luster (Patent-pending)*

The CZ-H35S maintains accurate detection despite changing target conditions.

**CZ-H32**  
Adjustable Spot, Reflective Type

*Adjustable Beam Spot*

Three beam spot sizes can be easily selected by adjusting the slide switch, allowing a wide range of targets to be inspected.

### LASER SENSOR (Hi-Power)

World's Smallest, Long Range, High Accuracy, Fast Response, Two Digital Displays

**LV-H42 Series**  
Long Distance Straight-beam, Retro-reflective

- Easy optical axis alignment
- Detection range up to 275.59" (7,000 mm)
- Spot diameter of 0.06" (1.5 mm) at a distance of up to 39.37" (1m)
- High-power mode with 16-bit resolution for high accuracy detection

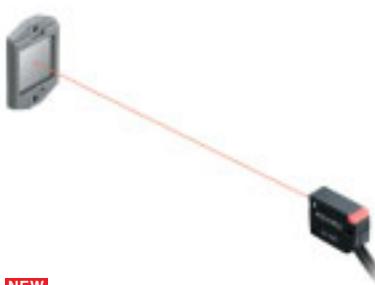

**LV-H300/100 Series**  
Wide Area Thrubeam Laser Sensor

- Wide Area Thrubeam Laser Sensor
- World's smallest size
- Linear area beam (Transmitter)
- Light diffusion sheet (Receiver)
- Easy adjustment of beam axis

### LASER SENSOR (Compact)

World's Smallest, Long Range, High Accuracy, Fast Response, Two Digital Displays

**NEW**  
**LV-S61 Series**  
Straight beam, Retro-reflective Laser

- 1/3 the Volume of Conventional Models
- Built in P.R.O. Function
- 0.10" (0.25 mm) Spot Diameter

**NEW**  
**LV-S41/S41L Series**  
Reflective Laser

- Smallest Diffuse Reflective Red Laser Sensor
- Bright output indicator
- 0.05" (1.2 mm) Spot Diameter
- Side-view model (LV-S41L)

Specifications are subject to change without notice.
