REGULATING PULSE WIDTH MODULATORS**ABSOLUTE MAXIMUM RATINGS**

T-58-11-31

Supply Voltage (+V _{CC}) (low impedance source)	+30V	Power Dissipation at T _A = +25°C (Note 1) N and J Packages	1000mW
Supply Voltage (V _{CC}) (I _{CC} < 30mA)	Self limiting	T _C = +25°C (Note 2) D Packages	725mW
Output Current	+1A	T _C = +25°C (Note 3) N and J Packages	2000mW
Output Energy (capacitive load)	5μJ	Storage Temperature Range	-65°C to +150°C
Analog Inputs (pins 2 and 3)	-0.3V to +V _{CC}	Lead Temperature (Soldering, 10 seconds)	+300°C
Error Amp Output Sink Current	10mA		

Absolute maximum ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The electrical characteristics provide conditions for actual device operation.

RECOMMENDED OPERATING CONDITIONS (Note 4)

Supply Voltage (+V _{CC})	≤30V	Operating Ambient Temperature Range:	
Output Current	0 to ±200mA	IP1844, IP1845	-55°C to +125°C
Analog Inputs (pins 2 and 3)	-0.3V to 3V	IP2844, IP2845	-25°C to +85°C
Error Amp Output Sink Current	0 to 2mA	IP3844, IP3845	0°C to +70°C

Note 1. Derate at 10 mW/°C, for N and J packages, for ambient temperatures above +50°C.
 Note 2. Derate at 7.25 mW/°C for D packages, for ambient temperatures above +50°C.
 Note 3. Derate at 16 mW/°C for case temperatures above +25°C.
 Note 4. Range over which the device is functional and parameter limits are guaranteed.

ELECTRICAL CHARACTERISTICS

V_{CC} = 15V, f = 52kHz, R_T = 10k, C_T = 3.3nF unless otherwise specified (Note 6)

Oscillator Waveforms and Maximum Duty Cycle

2

LARGE R_T
SMALL C_T

SMALL R_T
LARGE C_T

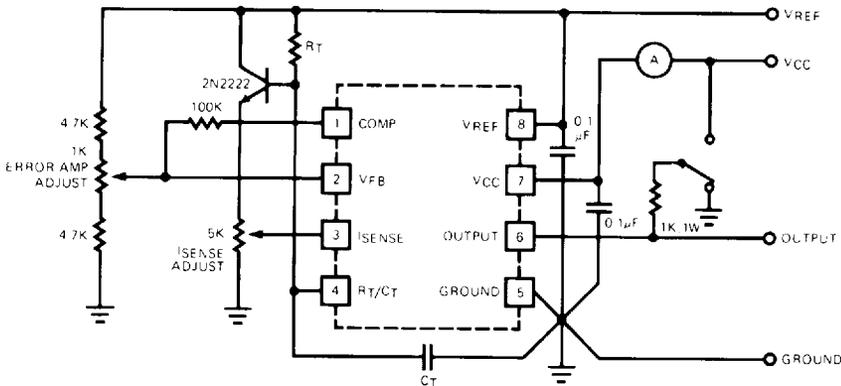

Oscillator timing capacitor, C_T is charged by V_{REF} through R_T and discharged by an internal current source. During the discharge time, the internal clock signal blanks the output to the low state. Selection of R_T and C_T therefore determines both oscillator frequency and maximum duty cycle. Charge and discharge times are determined by the formulas:

$$t_c \approx 0.55 R_T C_T$$

$$t_d \approx R_T C_T \ln \left(\frac{.0063 R_T - 2.3}{.0063 - 4} \right)$$

Frequency, then is: $f = (t_c + t_d)^{-1}$ For $R_T > 5k$, $f \approx \frac{1.8}{R_T C_T}$

Open-Loop Laboratory Test Fixture

High peak current associated with capacitive loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected close to pin 5 in a single point ground. The transistor and 5K potentiometer are used to sample the oscillator wave form and apply an adjustable ramp to pin 3.
