

STEP-UP/STEP-DOWN VFM DC/DC CONVERTER
with VOLTAGE DETECTOR RS5RJ Series

■ OUTLINE

RS5RJ Series are compact DC/DC converter ICs with a voltage detector and are developed with CMOS process technology. The devices consist of a VFM type DC/DC converter, a series regulator and a voltage detector. As external components, a coil, a diode, and a capacitor are available for making the output constant. When the input voltage is sufficiently high, they work as series regulators. When the input voltage falls down, they work as step-up DC/DC converters. The RS5RJ series include a voltage detector and the output voltage can be detected. The chip enable can switch off the DC/DC converter and the voltage detector, and can save consumption current at standby state. The RS5RJ is fit for battery-operated equipment.
