

MGA-16316

Dual LNA for Balanced Application 1950-2700 MHz

Data Sheet

Description

Avago Technologies' MGA-16316 is an ultra low-noise high linearity amplifier pair with built-in active bias and shutdown features for balanced applications in the 2600MHz band. Shutdown functionality is achieved using a single DC voltage input pin. High linearity is achieved through the use of Avago Technologies' proprietary GaAs Enhancement-mode pHEMT process [1]. It is housed in a miniature 4.0 x 4.0 x 0.85mm 16-pin Quad Flat No-lead (QFN). The compact footprint coupled with ultra low noise and high linearity makes MGA-16316 an ideal choice for basestation transmitters and receivers.

For applications < 1950 MHz, it is recommended to use MGA-16216 1440-2350 MHz or MGA-16116 450-1450 MHz. All 3 products share the same package and pin out configuration.

Typical Performances

2600 MHz @ 4.8V, 54mA (typ per amplifier)

- Gain : 18.5 dB.
- NF : 0.378 dB [2]
- IIP3 : 16.77 dBm
- P1dB : 18.7 dBm
- Shutdown voltage range Vsd > 1.5V
- Shutdown current (Vsd1, Vsd2 = 3V) : 5.1mA

Applications

- Basestation receivers and transmitters in balanced configuration.
- Ultra low-noise RF amplifiers.

Notes:

1. Enhancement mode technology employs positive Vgs, thereby eliminating the need of negative gate voltage associated with conventional depletion mode devices.
2. Measured at RFin pin of packaged part, other losses deemed.
3. Good RF practice requires all unused pins to be grounded.

Attention: Observe precautions for handling electrostatic sensitive devices.
