10-page intelligent teletext decoders SAA5261; SAA5262; SAA5263

FEATURES

SAA5261, SAA5262 and SAA5263

- Complete 625-line teletext decoder in a single integrated circuit thereby reducing printed-circuit board area and cost
- Automatic detection of transmitted pages so that only existing pages will be selected by page-up and page-down once inventory validated
- Automatic detection of transmitted Fasttext links or service information (packet 8/30)
- On-screen display for user interface (menus, etc.) using teletext and dedicated menu icons
- Video Programming System (VPS) decoding
- Wide Screen Signalling (WSS) decoding
- 8-page Fasttext decoder
- 6-page TOP decoder in addition to capture of Basic TOP Table (BTT) and 3 Additional Information Table (AIT) pages
- 4-page user defined list mode
- Yugoslavian, Cyrillic, Greek/Turkish, Thai, Arabic/Hebrew, Pan-European and Arabic/English/French language coverage
- High level command interface via I²C-bus giving easy control from a low software overhead
- High level command interface is backward compatible to SAFARI interface
- 625 and 525 line display
- RGB interface to standard colour decoder ICs, push-pull output drive
- Versatile 8-bit open-drain I/O expander
- Single 12 MHz crystal oscillator for reduced cost
- +5 V power supply.

SAA5262 and SAA5263

- Automatic Channel Installation (ACI)
- Enhanced SAFARI interface providing additional commands.

SAA5263

- Electronic Programme Guide (EPG) feature.

GENERAL DESCRIPTION

The SAA526xPS ICs are single-chip 10-page 625-line World System Teletext (WST) decoders with a high level command interface, SAFARI compatible.

It has been designed so that the overall system cost is kept to a minimum. This has been achieved through the capability of the device to be driven from a single +5 V power supply, low cost 12 MHz crystal oscillator and the high level command interface, which offers the benefit of low software overhead in the TV microcontroller.

The SAA526xPS offers automatic detection of Fasttext or TOP transmissions. The device also incorporates a facility to detect the pages in the transmission, which allows only transmitted pages to be selected by page-up and page-down.

SAA5262 and SAA5263 provide Automatic Channel Installation (ACI) information.

SAA5263 provides access to Electronic Programme Guide (EPG) information.

ORDERING INFORMATION

| TYPE NUMBER | PACKAGE | | |
|-------------|---------|---|----------|
| | NAME | DESCRIPTION | VERSION |
| SAA5261PS | SDIP52 | plastic shrink dual in-line package; 52 leads (600 mil) | SOT247-1 |
| SAA5262PS | SDIP52 | plastic shrink dual in-line package; 52 leads (600 mil) | SOT247-1 |
| SAA5263PS | SDIP52 | plastic shrink dual in-line package; 52 leads (600 mil) | SOT247-1 |

QUICK REFERENCE DATA

| SYMBOL | PARAMETER | MIN. | TYP. | MAX. | UNIT |
|-------------|--------------------------------|------|------|------|------|
| V_{DD} | digital supply voltage | 4.5 | 5.0 | 5.5 | V |
| $I_{DD(M)}$ | microcontroller supply current | – | 20 | 35 | mA |
| I_{DDA} | analog supply current | – | 35 | 50 | mA |
| $I_{DD(T)}$ | teletext supply current | – | 50 | 80 | mA |
| f_{xtal} | crystal frequency | – | 12 | – | MHz |
| T_{amb} | operating ambient temperature | –20 | – | +70 | °C |

PINNING

| SYMBOL | PIN | DESCRIPTION |
|-------------------|-----|--|
| V0 | 1 | versatile open-drain input/output bit 0 (should be tied HIGH) |
| V1 | 2 | versatile open-drain input/output bit 1 (should be tied HIGH) |
| V2 | 3 | versatile open-drain input/output bit 2 (should be tied HIGH) |
| V3 | 4 | versatile open-drain input/output bit 3 (should be tied HIGH) |
| V4 | 5 | versatile open-drain input/output bit 4 (should be tied HIGH) |
| V5 | 6 | versatile open-drain input/output bit 5 (should be tied HIGH) |
| V6 | 7 | versatile open-drain input/output bit 6 (should be tied HIGH) |
| V7 | 8 | versatile open-drain input/output bit 7 (should be tied HIGH) |
| res | 9 | reserved |
| res | 10 | reserved |
| res | 11 | reserved |
| res | 12 | reserved |
| V _{SSD1} | 13 | digital ground 1 |
| SCLK1 | 14 | serial clock input 1 (NVRAM) |
| SDAT1 | 15 | serial data input/output 1 (NVRAM) |
| SA | 16 | slave address input: LOW selects 58H; HIGH selects 60H |
| FP | 17 | field polarity input: LOW selects first half line; HIGH selects second half line at the start of an even field |
| HSMODE | 18 | horizontal sync mode control input: LOW selects HSYNC on rising edge |
| VSMODE | 19 | vertical sync mode control input. LOW selects VSYNC on rising edge |
| PDI | 20 | power-down imminent input: this input should be pulled LOW to indicate that the system is about to lose power |
| PL | 21 | phase-lock output: HIGH indicates that the system is phase-locked to the CVBS input |
| V _{SSA} | 22 | analog ground |
| CVBS1 | 23 | CVBS input: this signal is applied via a 100 nF capacitor (nominal input 1 V (p-p)) |
| CVBS2 | 24 | this pin should be connected to ground if unused |
| BLACK | 25 | black level input: a 100 nF capacitor should be connected to V _{SSA} |
| I _{ref} | 26 | reference current input for analog circuits: for correct operation a 27 kΩ resistor should be connected to V _{SSA} |
| FRAME | 27 | Frame output for use in non-interlaced displays: during teletext off, teletext mixed with TV picture and subtitles this pin is inactive. In full teletext mode this pin provides a 25 Hz square wave. FRAME = 1 = odd, FRAME = 0 = even. |
| V _{SSD2} | 28 | digital ground 2 |
| COR | 29 | contrast reduction: active LOW output which allows selective contrast reduction of the television picture to enhance a mixed mode display |
| PON | 30 | picture on output: HIGH indicates that a TV picture is present and that the SAA526xPS is in TV mode, mix mode, subtitle mode or news flash mode |
| RGBREF | 31 | RGB reference input: drive level reference for RGB outputs |
| B | 32 | blue dot rate character output of the blue colour information: the high voltage level is defined by the RGBREF pin (can source 4 mA) |

10-page intelligent teletext decoders

SAA5261; SAA5262; SAA5263

| SYMBOL | PIN | DESCRIPTION |
|---------------------|-----|--|
| G | 33 | green dot rate character output of the green colour information: the high voltage level is defined by the RGBREF pin (can source 4 mA) |
| R | 34 | red dot rate character output of the red colour information: the high voltage level is defined by the RGBREF pin (can source 4 mA) |
| VDS | 35 | push-pull output for blanking the TV picture |
| HSYNC | 36 | horizontal sync input: the polarity of this pulse is set by input HSMODE |
| VSNC | 37 | vertical sync input: the polarity of this pulse is set by input VSMODE |
| V _{DDA} | 38 | analog supply voltage (+5 V) |
| V _{DDD(T)} | 39 | digital supply voltage for teletext circuits (+5 V) |
| OSCGND | 40 | ground for crystal oscillator |
| XTALI | 41 | 12 MHz crystal oscillator input |
| XTALO | 42 | 12 MHz crystal oscillator output |
| RESET | 43 | reset input |
| V _{DDD(M)} | 44 | digital supply voltage for microcontroller (+5 V) |
| PUINL | 45 | power-up in list mode control input: LOW selects auto TOP/Fasttext on power-up; HIGH selects LIST mode on power-up |
| DISDSR | 46 | disable default status row input: LOW enables display of status row |
| DIS8/30 | 47 | disable packet 8/30 display input: LOW enables display of packet 8/30 |
| DISLCBD | 48 | disable Link Control Byte (LCB) decode input: LOW enables decoding of the LCB in Fasttext |
| SCLK2 | 49 | serial clock input (I ² C-bus) |
| SDAT2 | 50 | serial data input/output (I ² C-bus) |
| ME8/30T | 51 | mesh 8/30 and time displays input: HIGH will select a meshed display for the packet 8/30 and time |
| E/ \bar{W} | 52 | East/West language select input: LOW selects West language |

HIGH LEVEL COMMAND INTERFACE

The I²C-bus interface is used to pass control commands and data between the SAA526xPS and the television microcontroller. The interface uses high level commands, which are backward compatible with the SAFARI interface.

The formats for the I²C-bus transmission are as follows:

Table 1 User command

| | | | | | | |
|-------|------------------------------|-------|-----|---------|-----|------|
| START | I ² C-bus ADDRESS | WRITE | ACK | COMMAND | ACK | STOP |
|-------|------------------------------|-------|-----|---------|-----|------|

Table 2 System command

| | | | | | | | | |
|-------|------------------------------|-------|-----|---------|-----|-----------|-----|------|
| START | I ² C-bus ADDRESS | WRITE | ACK | COMMAND | ACK | PARAMETER | ACK | STOP |
|-------|------------------------------|-------|-----|---------|-----|-----------|-----|------|

Table 3 System read

| | | | | | | |
|-------|------------------------------|------|-----|------|------|------|
| START | I ² C-bus ADDRESS | READ | ACK | DATA | NACK | STOP |
|-------|------------------------------|------|-----|------|------|------|

Table 4 I²C-bus address

| PIN 16 = LOW | | PIN 16 = HIGH | |
|--------------|---------------------|---------------|---------------------|
| ADDRESS | DESCRIPTION | ADDRESS | DESCRIPTION |
| 01 01 100 | read = 1; write = 0 | 0110 000 | read = 1; write = 0 |

Table 5 Control commands

LIMITING VALUES

In accordance with Absolute Maximum Rating System (IEC 134).

| SYMBOL | PARAMETER | CONDITIONS | MIN. | MAX. | UNIT |
|-------------------|----------------------------------|------------|------|---------------------------|------|
| V _{DDD} | digital supply voltages | | -0.3 | +6.5 | V |
| V _{DDA} | analog supply voltage | | -0.3 | +6.5 | V |
| V _I | input voltage (any input) | note 1 | -0.3 | V _{DDD(M)} + 0.5 | V |
| V _O | output voltage (any output) | note 1 | -0.3 | V _{DDD(M)} + 0.5 | V |
| I _O | output current (each output) | | - | ±10 | mA |
| I _{I/OK} | DC input or output diode current | | - | ±20 | mA |
| T _{amb} | operating ambient temperature | | -20 | +70 | °C |
| T _{stg} | storage temperature | | -55 | +125 | °C |

Note

1. This maximum value has an absolute maximum of 6.5 V independent of V_{DDD}.

QUALITY AND RELIABILITY

This device will meet Philips Semiconductors general quality specification for business group "Consumer Integrated Circuits SNW-FQ-611-Part E". The principal requirements are shown in Tables 6 to 9.

Group A**Table 6** Acceptance tests per lot; note 1

| TEST | REQUIREMENTS |
|------------|----------------------------|
| Mechanical | cumulative target: <80 ppm |
| Electrical | cumulative target: <80 ppm |

Note

1. ppm = fraction of defective devices, in parts per million.

Group B**Table 7** Processability tests (by package family); note 1

| TEST | REQUIREMENTS |
|------------------------|--------------|
| Solderability | <7% LTPD |
| Mechanical | <15% LTPD |
| Solder heat resistance | <15% LTPD |

Note

1. LTPD = Lot Tolerance Percent Defective.

10-page intelligent teletext decoders

SAA5261; SAA5262; SAA5263

Group C**Table 8** Reliability tests (by package family); note 1

| TEST | CONDITIONS | REQUIREMENTS |
|---------------------------------|--|-----------------------------------|
| Operational life | 168 hours at $T_j = 150\text{ °C}$ | <1000 FPM at $T_j = 70\text{ °C}$ |
| Humidity life | temperature, humidity, bias 1000 hours, $T_{amb} = 85\text{ °C}$, 85% RH (or equivalent test) | <2000 FPM |
| Temperature cycling performance | $T_{stg(min)}$ to $T_{stg(max)}$ | <2000 FPM |

Note

1. FPM = fraction of devices failing at test conditions, in Failures Per Million.

Table 9 Reliability tests (by device type)

| TEST | CONDITIONS | REQUIREMENTS |
|------------------|---|---|
| ESD and latch-up | ESD human body model 100 pF, 1.5 k Ω | <2000 V |
| | ESD machine model 200 pF, 0 Ω | <200 V |
| | latch-up | 100 mA, 1.5V _{DD} (absolute maximum) |

CHARACTERISTICS

$V_{DD(M)} = 5\text{ V} \pm 10\%$; $V_{SS} = 0\text{ V}$; $T_{amb} = -20\text{ to }+70\text{ °C}$; unless otherwise specified.

Notes

- This parameter is determined by the user software. It must comply with the I²C-bus specification.
- This value gives the auto-clock pulse length which meets the I²C-bus specification for the special crystal frequency. Alternative, the SCL pulse must be timed by software.
- The rise time is determined by the external bus line capacitance and pull-up resistor. It must be less than 1 μs .
- The maximum capacitance on bus lines SDA and SCL is 400 pF.

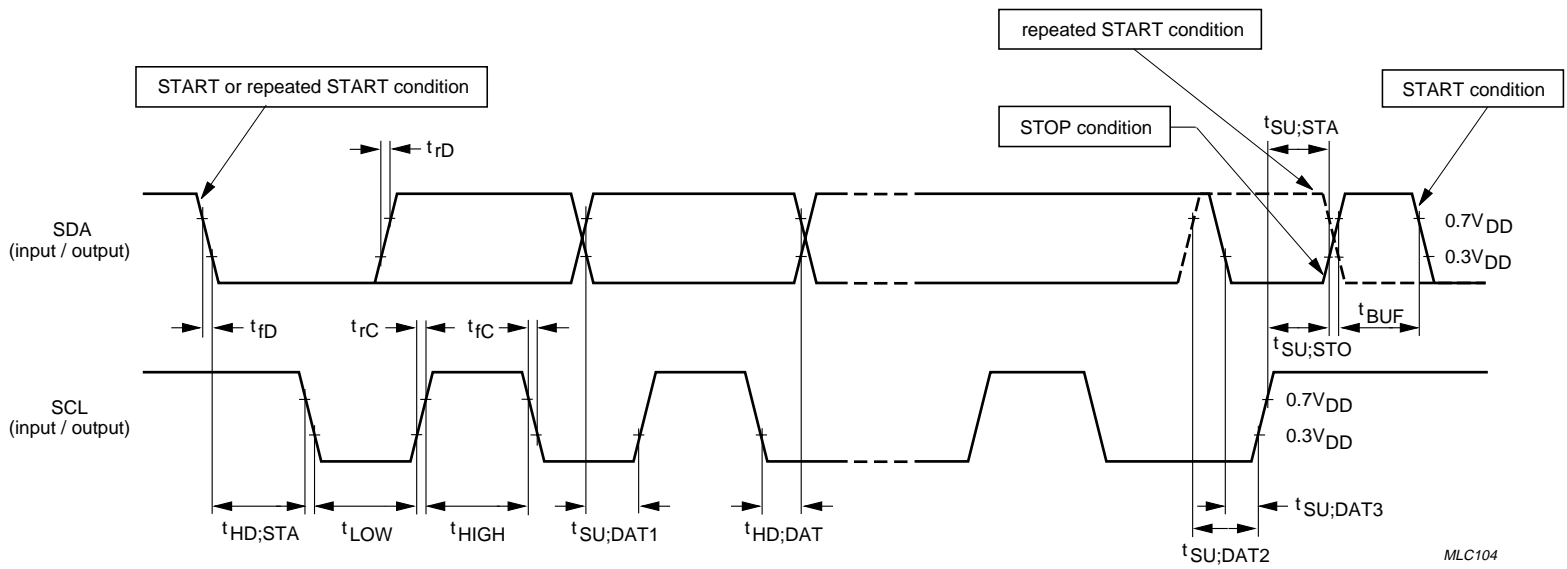

Fig.13 I²C-bus interface timing.

CLOCK GENERATOR

The oscillator circuit is a single-stage inverting amplifier in a Pierce oscillator configuration. The circuitry between pins XTALI and XTALO is basically an inverter biased to the transfer point. A crystal must be used as the feedback element to complete the oscillator circuitry. It is operated in parallel resonance. XTALI is the high gain amplifier input and XTALO is the output.

To drive the device externally XTALI is driven from an external source and XTALO is left open-circuit.

SAA5261; SAA5262; SAA5263

EMC GUIDELINES

Optimization of circuit return paths and minimisation of common mode noise will be assisted by using a double-sided PCB with a low inductance ground plane.

On a single-sided PCB a local ground plane under the whole IC should be present, as shown in Fig.16. This should be connected by the widest possible connection back to the PCB ground connection and bulk electrolytic decoupling capacitor. It should preferably not connect to other grounds on the way and no wire links should be present in this connection. The use of wire links increases ground bounce by introducing inductance into the ground.

The supply pins can be decoupled at the pin to the ground plane under the IC. This is easily accomplished using surface mount capacitors, which are more effective than leaded components at high frequency. Using a device socket will unfortunately add to the area and inductance of the external bypass loop.

A ferrite bead or inductor with resistive characteristics at high frequency may be utilized in the supply line close to the decoupling capacitor to provide a high impedance. To prevent pollution by conduction onto signal lines (which may then radiate) signals connected to the +5 V supply via a pull up resistor should not be connected to the IC side of the ferrite component.

OSCGND should be connected only to the crystal load capacitors and not the local or circuit ground.

Keep physical connection distances to associated active devices short.

Route output traces with close proximity mutually coupled ground return paths.

SOLDERING**Introduction**

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "Data Handbook IC26; Integrated Circuit Packages" (order code 9398 652 90011).

Soldering by dipping or by wave

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact

with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ($T_{stg\ max}$). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

Repairing soldered joints

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

DEFINITIONS

| | |
|---|---|
| Data sheet status | |
| Objective specification | This data sheet contains target or goal specifications for product development. |
| Preliminary specification | This data sheet contains preliminary data; supplementary data may be published later. |
| Product specification | This data sheet contains final product specifications. |
| Limiting values | |
| Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability. | |
| Application information | |
| Where application information is given, it is advisory and does not form part of the specification. | |

LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.

PURCHASE OF PHILIPS I²C COMPONENTS

Purchase of Philips I²C components conveys a license under the Philips' I²C patent to use the components in the I²C system provided the system conforms to the I²C specification defined by Philips. This specification can be ordered using the code 9398 393 40011.
