## LV47022P — Monolithic Linear IC For Car Audio Systems 4-Channel BTL Power Amplifier

### Overview

The LV47022P is the IC for 4-channel BTL power amplifier that is developed for car audio system.

Pch DMOS in the upper side of the output stage and Nch DMOS in the lower side of the output stage are complimentary. High power and high quality sound are realized by that.

This IC incorporate various functions (standby switch, muting function, and various protection circuit) necessary for car audio system. Also, it has a self-diagnosis function.

### Functions

- High output :  $P_O$  max = 48W (typical) ( $V_{CC} = 15.2V$ ,  $f = 1kHz$ ,  $R_L = 4\Omega$ , Max Power)  
:  $P_O$  max = 28W (typical) ( $V_{CC} = 14.4V$ ,  $f = 1kHz$ , THD = 10%,  $R_L = 4\Omega$ )  
:  $P_O$  max = 21W (typical) ( $V_{CC} = 14.4V$ ,  $f = 1kHz$ , THD = 1%,  $R_L = 4\Omega$ )
- Built-in muting function (pin 22)
- Built-in Standby switch (pin 4)
- Built-in Self-diagnosis function (pin 25) :  
Signal output in case of output offset detection, shorting to  $V_{CC}$ , shorting to ground, load shorting and over voltage.
- Circuit that decrease of Electric mirror noise and GSM noise.
- Built-in various protection circuit (shorting to ground, shorting to  $V_{CC}$ , load shorting, over voltage and thermal shut down)

Note 1 : Please do not mistake connection.

A wrong connection may produce destruction, deterioration and damage for the IC or equipment.

Note 2 : The protective circuit function is provided to temporarily avoid abnormal state such as incorrect output connection.

But, there is no guarantee that the IC is not destroyed by the accident.

The protective function do not operate of the operation guarantee range. If the outputs are connected incorrectly, IC destruction may occur when used outside of the operation guarantee range.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

# LV47022P

## Specifications

### Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{CC\ max1}$	No signal, $t = 1$ minute	26	V
	$V_{CC\ max2}$	During operations	18	V
Maximum output current	$I_{O\ peak}$	Per channel	4.5/ch	A
Allowable power dissipation	$P_d\ max$	With an infinity heat sink	50	W
Operating temperature	$T_{opr}$		-40 to +85	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-40 to +150	$^\circ\text{C}$
Junction temperature	$T_j$		150	$^\circ\text{C}$
Thermal resistance between the junction and case	$\theta_{j-c}$		1	$^\circ\text{C/W}$

### Recommended Operating Ranges at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Recommended load resistance	$R_L\ op$		4	$\Omega$
Operating supply voltage range	$V_{CC\ op}$	A range not exceeding $P_{dmax}$	8 to 16	V

### Electrical Characteristics at $T_a = 25^\circ\text{C}$ , $V_{CC} = 14.4\text{V}$ , $R_L = 4\Omega$ , $f = 1\text{kHz}$ , $R_g = 600\Omega$

Parameter	Symbol	Conditions	Ratings			Unit
			Min.	Typ.	Max.	
Quiescent current	$I_{CCO}$	$R_L = \infty$ , $R_g = 0\Omega$		200	400	mA
Standby current	$I_{st}$	$V_{st} = 0\text{V}$			3	$\mu\text{A}$
Voltage gain	VG	$V_O = 0\text{dBm}$	25	26	27	dB
Voltage gain difference	$\Delta\text{VG}$		-1		+1	dB
Output power	$P_O$	THD = 10%	23	28		W
	$P_O\ max1$	Max Power		43		W
	$P_O\ max2$	$V_{CC} = 15.2$ , Max Power		48		W
Output offset voltage	$V_n\ offset$	$R_g = 0\Omega$	-100		+100	mV
Total harmonic distortion	THD	$P_O = 4\text{W}$		0.02	0.10	%
Channel separation	CHsep	$V_O = 0\text{dBm}$ , $R_g = 10\text{k}\Omega$	55	65		dB
Ripple rejection ratio	SVRR	$R_g = 0\Omega$ , $f_r = 100\text{Hz}$ , $V_{CCR} = 0\text{dBm}$	50	65		dB
Output noise voltage	$V_{NO}$	$R_g = 0\Omega$ , B.P.F. = 20Hz to 20kHz		60	120	$\mu\text{Vrms}$
Input resistance	$R_i$		80	100	120	$\text{k}\Omega$
Mute attenuation	Matt	$V_O = 20\text{dBm}$ , mute : on	80	90		dB
Standby pin control voltage	$V_{stby\ H}$	Amp : on	2.5		$V_{CC}$	V
	$V_{stby\ L}$	Amp : off	0.0		0.5	V
Mute pin control voltage	$V_{mute\ H}$	Mute : off	2.9		6.0	V
	$V_{mute\ L}$	Mute : on	0.0		1.0	V
Output offset detection						
Detection threshold voltage	$V_{osdet}$		$\pm 1.2$	$\pm 1.8$	$\pm 2.4$	V

\* 0dBm = 0.775Vrms

# LV47022P

## Block Diagram

### Important points

Please connect Pin1 line near C7 and C8. Because Pin1 is substrate of IC.

# LV47022P

## Package Dimensions

unit : mm (typ)  
3236A

## External Components

Part Name	Recommended Value	Purpose	Remarks
C1 to C4	0.22μF	Cuts DC voltage	The larger the constant value, the lower the cut-off frequency. When AMP ON, bigger value worse pop noise. The values of C1 to C4 must be the same. C1 to C4 must use capacitor of low leak current.
C5	1μF	Cuts DC voltage	The ratio of the input capacitance (C1 to C4) to the ACGND capacitance (C5) should be 1:4. If the ratio deviates, pop noise and SVRR are worse. Use capacitor same as C1 to C4.
C6	22μF	Reduces pop noise (AMP ON/OFF) Reduces ripples	The larger the constant value, the longer the amplifier ON/OFF time. The larger the constant value, SVRR is good. On the other hand, the smaller constant value. AMP ON/OFF will be shorter.
C7	2200μF	Ripple filter	Eliminating power supply ripples. Please put near IC.
C8	0.1μF	Improves oscillation stability	Reducing high-frequency noise. Please put near IC.
C9	1μF	Reduces pop noise (Mute ON↔OFF)	The larger the constant value, pop noise is small. The large the constant value, the longer the mute ON/OFF time. On the other hand, the smaller constant value. Mute ON/OFF will be shorter. And, Mute ON↔OFF pop noise will be worse.
R1	47kΩ		
R2	4.7kΩ	Pull-up resistor	Because of transistor ability in IC, Please use 2.2kΩ or more.

\* The components and constant values within the test circuit are used for confirmation of characteristics and are not guarantees that incorrect or trouble will not occur in application equipment.

**Explanation for the function**

1. Standby switch function (pin 4)

Threshold voltage of the Pin 4 is set by about 2VBE.

The amplifier is turned on by the applied voltage of 2.5V or more. Also, the amplifier is turned off by the applied voltage of 0.5V or less.

Fig1 Standby equivalent circuit

2. Muting function (Pin 22)

The muting function is turned on by the applied voltage of 1.0V or less to 22pin. And the muting function is turn off by the applied voltage 2.9V or more.

Also, the time constant of the muting function is determined by external capacitor and resistor constants.

It is concerned with mute ON/OFF. After enough examination, please set it.

Switching time

Mute ON:  $C9 \times R1$

Mute OFF:  $(C9 \times V) / I$  (V= When Mute ON Pin 22 voltage, I=about 5μA)

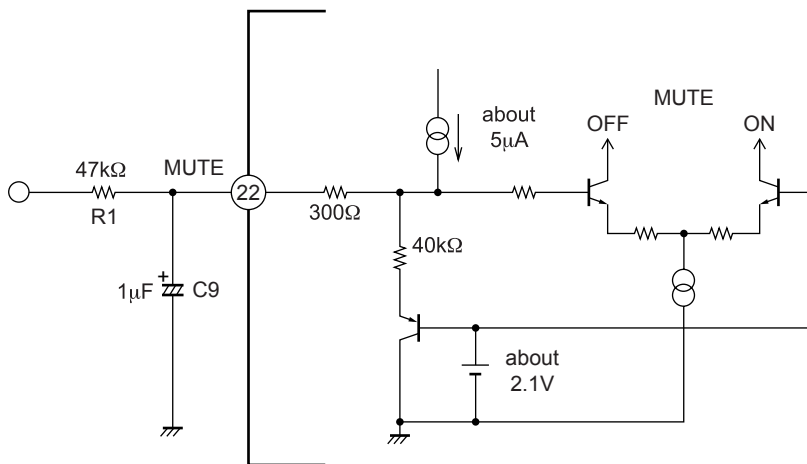

Fig2 Mute equivalent circuit

3. Input pin (Pin 11/ Pin 12/ Pin 14/ Pin 15), ACGND pin (Pin 16)

The ratio of the input capacitance (C1 to C4) to the ACGND capacitance (C5) should be 1:4.

Please use same kind of capacitor.

Please connect the ACGND capacitor to PREGND.

It is all five pin 100kΩ of input resistance.

Do not input below 0V to Pin-IN (Pin 11/ Pin12/ Pin 14/ Pin15).

If you input below 0V to Pin-IN, LV47022P can not function well.

# LV47022P

## 4. Self-diagnostics function (Pin 25)

In four modes to write below, the signal is output to the Pin 25.

Also, by controlling the standby switch after the signal of the Pin 25 is detected by the microcomputer, the burnout of the speaker can be prevented.

- (1) Shorting to  $V_{CC}$ /Shorting to ground : The Pin 25 becomes the low level.
- (2) Load shorting : The Pin 25 is alternated between the low level and the high level according to the output signal.
- (3) Over voltage : When the voltage of  $V_{CC}$  exceeds voltage 21V (typical), the Pin 25 becomes the low level.
- (4) Output offset detection : When the output offset voltage exceeds the detection threshold voltage, the Pin 25 becomes the low level.

In addition, the Pin 25 has become the NPN open collector output (active low).

The Pin 25 must be left open when this function is not used.

Fig3 Offset detection

Fig4 Operating Pin 25

## 5. Sound quality (low frequencies)

By varying the value of input capacitor, low-frequency characteristic can be improved.  
However, it is concerned the pop noise. Please confirm in each set when the capacitance value varies.

## 6. Pop noise

For pop noise prevention, it is recommended to use the muting function at the same time.

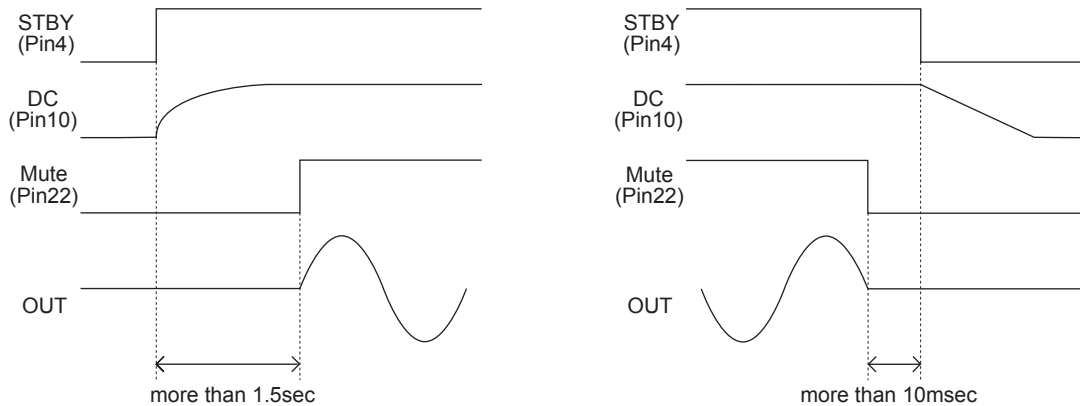

### At AMP ON

Set MUTE ON first, then set STBY pin High ( AMP ON).

About 1.5sec later, set to be MUTE OFF.

### At AMP OFF

After 10msec later MUTE ON, please do STBY pin Low ( AMP OFF).

## 7. Oscillation stability

Pay due attention on the following points because parasitic oscillation may occur due to effects of the board layout, etc.

### Board layout

- Provide the  $V_{CC}$  capacitor of  $0.1\mu\text{F}$  in the position nearest to IC.
- PREGND must be independently wired and connected to the GND point that is as stable as possible, such as the minus pin of the  $2200\mu\text{F}$   $V_{CC}$  capacitor.

In case of occurrence of parasitic oscillation, any one of following parts may be added as a countermeasure.

Please check your capacitor of optimal value at set

- Series connection of CR ( $0.1\mu\text{F}$  and  $2.2\Omega$ ) between each output pin and GND.

## 8. EMC countermeasure

LV47022P has function that decrease of Electric mirror noise and GSM noise.

When you connect capacitor of more than  $1000\text{pF}$  between out and GND because of EMC countermeasure, please add oscillation cut parts. Value of oscillation prevention parts recommends  $2.2\Omega + 0.1\mu\text{F}$ .

# LV47022P

HZIP25 Heat sink attachment

Heat sinks are used to lower the semiconductor device junction temperature by leading the heat generated by the device to the outer environment and dissipating that heat.

- a. Unless otherwise specified, for power ICs with tabs and power ICs with attached heat sinks, solder must not be applied to the heat sink or tabs.

b. Heat sink attachment

- Use flat-head screws to attach heat sinks.
- Use also washer to protect the package.
- Use tightening torques in the ranges 39-59Ncm(4-6kgcm) .
- If tapping screws are used, do not use screws with a diameter larger than the holes in the semiconductor device itself.
- Do not make gap, dust, or other contaminants to get between the semiconductor device and the tab or heat sink.
- Take care a position of via hole .
- Do not allow dirt, dust, or other contaminants to get between the semiconductor device and the tab or heat sink.
- Verify that there are no press burrs or screw-hole burrs on the heat sink.
- Warping in heat sinks and printed circuit boards must be no more than 0.05 mm between screw holes, for either concave or convex warping.
- Twisting must be limited to under 0.05 mm.
- Heat sink and semiconductor device are mounted in parallel.  
Take care of electric or compressed air drivers
- The speed of these torque wrenches should never exceed 700 rpm, and should typically be about 400 rpm.

c. Silicone grease

- Spread the silicone grease evenly when mounting heat sinks.
- Sanyo recommends YG-6260 (Momentive Performance Materials Japan LLC)

d. Mount

- First mount the heat sink on the semiconductor device, and then mount that assembly on the printed circuit board.
- When attaching a heat sink after mounting a semiconductor device into the printed circuit board, when tightening up a heat sink with the screw, the mechanical stress which is impossible to the semiconductor device and the pin doesn't hang.

e. When mounting the semiconductor device to the heat sink using jigs, etc.,

- Take care not to allow the device to ride onto the jig or positioning dowel.
- Design the jig so that no unreasonable mechanical stress is not applied to the semiconductor device.

f. Heat sink screw holes

- Be sure that chamfering and shear drop of heat sinks must not be larger than the diameter of screw head used.
- When using nuts, do not make the heat sink hole diameters larger than the diameter of the head of the screws used. A hole diameter about 15% larger than the diameter of the screw is desirable.
- When tap screws are used, be sure that the diameter of the holes in the heat sink are not too small. A diameter about 15% smaller than the diameter of the screw is desirable.

- g. There is a method to mount the semiconductor device to the heat sink by using a spring band. But this method is not recommended because of possible displacement due to fluctuation of the spring force with time or vibration.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
