Please note that all data and specifications are subject to change without notice. All the trade marks of products and companies mentioned in this data sheet belong to their respective owners.

LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury.   Customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Fintek for any damages resulting from such improper use or sales.

Table of Content

1. General Description

The F71612A is a USB IR chip and compatible for Microsoft Windows Vista and Windows 7 IR Receiver or Transceiver Emulation Device. It Supports 2 IR transceiver functions for blaster application and two IR receivers with long range frequency and wideband application.

In USB interface function, The F71612A communications with host by full-speed USB interface (12Mb/s). It supports 3 suits endpoint, one control endpoint(endpoint zero) is for bus enumeration, one output endpoint is for Microsoft Windows Vista/7 IR Receiver or Transceiver Emulation Device command and one input endpoint is transmit IR information to host.

In I2C interface function, The F71612A builds 256 bytes SRAM to save flash/ROM information from I2C for USB bus enumerations. The I2C flash/ROM contains IdVendor/ IdProduct/ BcdDevice/ Manufacturer string / IProduct string / iSerialNumber string information.

In power function, the F71612A supports remote-wakeup function during USB interface, when PC system into S3 state. The F71612A decodes IR protocol is the same power key of remote control. The F71612A is asserted USB interface to wakeup PC system. Others also provide hardware pin PSOUT# for system wakeup, when PC system in to S5 state, the F71612A is asserted PSOUT# pin to wakeup PC system.

2. Feature List

- Support Microsoft Windows Vista / Windows 7 IR Receiver
- Support RC6 and Quatro Pulse protocols
- Support Learning Function
- Support Remote Wake-up Capability
- Hardware Base Implementation
- Provide Data Receiver LED
- Support 2 IR Transceiver Function for Blaster Application
- One IR Receiver with Long Range Frequency and Another with Wideband Application
- I2C Interface for Related ID Data Reading.
- USB Interface for System Connection.
- Power by 3Vcc and Packaged in 16-SSOP Green Package.

3. Key Specification

- Supply Voltage   3.0V to 3.6V

- Operating Supply Current   8 mA typ.
- Standby Current   0.7 mA typ.

4. Pin Configuration

```
        D+  [  1              16  ]  VDD
        D-  [  2              15  ]  RX_NR#
     PSOUT# [  3              14  ]  RX_LR#
  STATE_SEL [  4    F71612A   13  ]  LED#
     XTALIN [  5              12  ]  TX0
    XTALOUT [  6              11  ]  TX1
      PWCTL [  7              10  ]  SDA
        GND [  8               9  ]  SCL
```

5. Pin Description

$I/O_{12t\_1.5k}$ - TTL level bi-directional pin with 12 mA drive/sink capability and internal pull hign 1.5kΩ

I/O_{12t} - TTL level bi-directional pin with 12 mA drive/sink capability.

OD_{12} - Open-drain output pin with 12 mA sink capability

OD_{12_5v} - Open-drain output pin with 12 mA sink capability and 5V tolerance

OD_{16_5v} - Open-drain output pin with 16 mA sink capability and 5V tolerance.

O_{12} - Output pin with 12 mA drive/sink capability.

IN_{ts} - TTL level input pin with schmitt trigger.

IN_{ts_5v} - TTL level input pin with schmitt trigger and 5V input tolerance.

IN_t - TTL level input pin.

P   - Power.

Pin No	Pin Name	Type	PWR	Description
1	D+	$I/O_{12t\_1.5k}$	VDD	D+. Different data bus conforming to USB standard. Internal pull high 1.5kΩ.
2	D-	I/O_{12t}	VDD	D-. Different data bus conforming to USB standard.
3	PSOUT#	OD_{12_5v}	VDD	Panel Switch Output. This pin is low active and pulse output. It is power on request output.
4	STATE_SEL	IN_{ts}	VDD	This pin is for wake up function. **For Portable Product** → Pull this pin to high for USB wake up. **For MB System Product** → Pull this pin to high and suggest connecting with one of S4/S5/GPIO pin. MB System in S4/S5 state: Wake up signal will be asserted by PSOUT# pin in S4/S5 state. MB System in S3 state: Wake up signal will be asserted by USB interface in S3 state.
5	XTALIN	IN_t	VDD	12MHz clock input.
6	XTALOUT	O_{12}	VDD	12MHz clock output.
7	PWCTL	OD_{12}	VDD	RX_LR learning power control pin. Suggest external pull high to 3.3V.
8	GND	P	VDD	Ground pin.
9	SCL	OD_{12_5V}	VDD	I2C interface serial clock
10	SDA	OD_{12_5V}	VDD	I2C interface serial data
11	TX1	O_{12}	VDD	IR transmits port 1. Pull down 100k resister to ground (TX/RX functions selection). No resister connects to ground (RX function only).
12	TX0	O12	VDD	IR transmits port 0. Pull down 100k resister to ground (TX/RX functions selection). No resister connects to ground (RX function only). (P.S One of TX pins pull down 100K resister to ground, chip feature will be selected to TX and RX functions, if not, chip will be selected to RX function only.)
13	LED#	OD16_5V	VDD	LED output pin.
14	RX_LR#	IN_{ts_5v}	VDD	IR receiver port1 (wide band for learning)

15	RX_NR#	IN$_{ts\_5v}$	VDD	IR receiver port0 (long range)
16	VDD	P	VDD	Power supply input 3.3V

6. Function Description

6.1 USB function

The F71612A communications with host by full-speed USB interface (12Mb/s). It supports 3 suits endpoint, one control endpoint(endpoint zero) is for bus enumeration, one output endpoint is for Microsoft Windows Vista IR Receiver or Transceiver Emulation Device command and one input endpoint is transmit IR information to host.

Endpoint zero is special significance in USB system. It is a control endpoint, and is required by every device. Only control endpoint accept special setup token that the host transfer command to device.

During enumeration, host requests GET_DESCRIPTOR to device and device return information (over in endpoint zero) as what device driver top load. The below table is about F71612A descriptor.

offset	Field	size	Value
0	BLength	1	0x12
1	bDescriptor Type	1	0x01
2	BcdUSB	2	0x0200
4	bDeviceClass	1	0x00
5	bDeviceSubClass	1	0x00
6	bDeviceProtocol	1	0x00
7	bMaxPacketSize	1	0x10
8	IdVendor	2	0x1934
10	IdProduct	2	0x5168
12	BcdDevice	2	0x0000
14	Manufacturer	1	0x01
15	IProduct	1	0x02
16	iSerialNumber	1	0x03
17	bNumConfiguration	1	0x01

Table 6-5 Out Endpoint Descriptor

The string table 1 is about manufacturer information, its' contents is "FINTEK", the string table 2 is about Product information, its contents is "eHome Infrared Transceiver. The string table 3 is about serial number information, its contents is "88636562727801".

In power function, The F71612A supports remote-wakeup function for USB interface, when PC system into S3 state. The F71612A decodes IR protocol is the same power key of remote control. The F71612A is asserted USB interface to wakeup PC system.

The F71612A is compatible for Microsoft Windows Vista / 7 IR Receiver or Transceiver Emulation Device. The F71612A support Microsoft Compatible Device Descriptor and Extended Compact ID Descriptor are used to tell the host what type of device the emulation is. Emulation Device driver transmits command over out endpoint1 and device return information over in endpoint1.

About descriptor and command information, reference Microsoft Windows Vista / 7 IR Receiver or Transceiver Emulation Device spec.

6.2 IR function

The F71612A Supports 2 IR transceiver functions for blaster application and two IR receivers with long range frequency and wideband application. The wide-band receiver is necessary to support IR learning, which is necessary to support IR-blasting and set-top box control.

The long-range receiver is a receiver which has the following characteristics:

1. Works at a distance of 10 meters.
2. Demodulates the signal inside the receiver part
3. Has a BPF which works with carriers from 32-60 kHz.

The wide-band receiver is a receiver part which has the following characters:

1. Works at a distance of approximately 5 centimeters.
2. Does not demodulate the signal inside the receiver part
3. Works with carriers from 32-60 kHz. (Probably doesn't have a BPF, but still has the same (or wider) range.

About IR information, reference Microsoft Windows Vista / 7 IR Receiver or Transceiver Emulation Device spec.

6.3 Wakeup function

The F71612A Supports 2 kinds of wakeup system function, PSOUT and remote wakeup for USB interface. The F71612A detect idle state on USB bus for more than 3.0ms, it is into suspend state.

In Suspend state, the F71612A decodes IR protocol information is the same power key of remote controller. It asserted PSOUT and USB interface. Reference the below figure
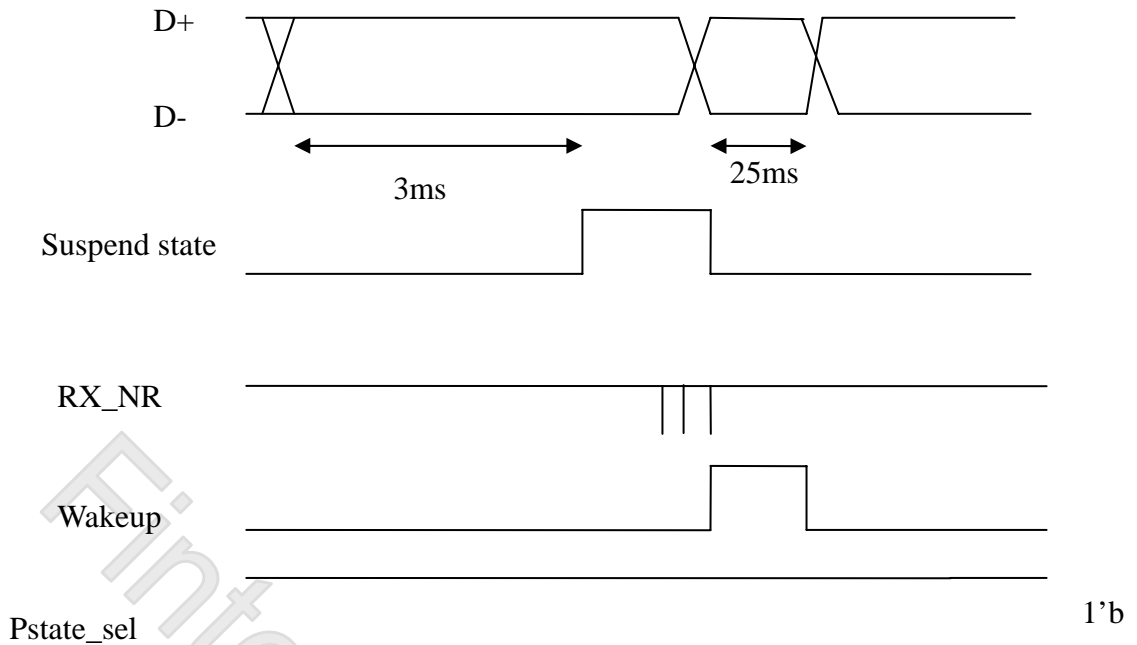

Figure 6-3-1 USB remote wakeup

Figure 6-3-2 PSOUT wakeup

6.4 I2C interface function

The F71612A Supports 1 suit I2C interface to get USB description information and builds 256 bytes RAM to save vendor USB description information. When power is ready, I2C function start to load USB description into 256 bytes RAM, and expect host requests GET_DESCRIPTOR to

F71612A

F71612A which returns vendor USB description, if i2c flash/ROM connect with F71612A. The contents of I2C flash /ROM format is below table.

When F71612A does not finish loading 256 bytes information from I2C flash/ROM, F71612A disable PAD 1 internal pull high 1.5k, still finish loading, F71612A enable PAD 1 internal pull high 1.5k.

0x0	Security code	0x55
0x1	Security code	0xaa
