# ECL/TTL Translator and High-Speed Bus Driver

### Features

- BiCMOS for optimum speed/power
- High speed (max.)
  - 2.5 ns  $t_{PD}$  TTL-to-ECL
  - 3 ns  $t_{PD}$  ECL-to-TTL
- Low skew  $< \pm 1$  ns
- Can operate on single +5V supply
- Full-duplex ECL/TTL data transmission
- Internal 2 k $\Omega$  ECL pull-down resistors on each ECL output
- Surface-mount PLCC/CLCC package
- $V_{BB}$  ECL reference voltage output
- Single- or dual-supply operation
- Capable of greater than 2001V ESD
- ECL cable/twisted pair driver

### Functional Description

The CY10/101E383 is a new-generation TTL-to-ECL and ECL-to-TTL logic level translator designed for high-performance systems. The device contains ten independent TTL-to-ECL and ten independent ECL-to-TTL translators for high-speed full-duplex data transmission, mixed logic, and bus applications. The CY10/101E383 is especially suited to drive ECL backplanes between TTL boards. The CY10/101E383 is implemented with differential ECL I/O to provide balanced low noise operation over controlled impedance buses between TTL and/or ECL subsystems. In addition, the device has internal output 2 k $\Omega$  pull-down resistors tied to  $V_{EE}$  to decrease the number of external components. For system testing purposes

or for driving light loads, the 2 k $\Omega$  is used as the only termination thereby eliminating up to 20 external resistors. The part meets standard 10K/10KH and 100K logic levels with the internal pull-down while driving 50 $\Omega$  to -2V.

The device is designed with ample ground pins to reduce bounce, and has separate ECL and TTL power/ground pins to reduce noise coupling between logic families. The parts can operate in single- or dual-supply configurations while maintaining absolute 10K/10KH and 100K level swings. The translators are offered in standard 10K/10KH (10E) and 100K (101E) ECL-compatible versions with -5.2V or -4.5V power supply. The TTL I/O is fully TTL compatible. The CY10/101E383 is packaged in 84-pin surface-mountable PLCCs and CLCCs.

## Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested.)

Storage Temperature .....  $-65^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$   
 Ambient Temperature with  
 Power Applied .....  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$   
 TTL Supply Voltage to Ground Potential ...  $-0.5\text{V}$  to  $+7.0\text{V}$   
 TTL DC Input Voltage .....  $-3.0\text{V}$  to  $+7.0\text{V}$   
 ECL Supply Voltage  $V_{EE}$  to ECL  $V_{CC}$  ....  $-7.0\text{V}$  to  $+0.5\text{V}$   
 ECL Input Voltage .....  $V_{EE}$  to  $+0.5\text{V}$   
 ECL Output Current .....  $-50\text{mA}$   
 Static Discharge Voltage .....  $> 2001\text{V}$   
 (per MIL-STD-883, Method 3015)

Latch-Up Current .....  $> 200\text{mA}$ 

## Operating Range

| Range      | I/O         | Version | Ambient Temperature                                  | ECL $V_{EE}$                      | TTL $V_{CC}$        |
|------------|-------------|---------|------------------------------------------------------|-----------------------------------|---------------------|
| Commercial | 10K<br>10KH | 10E     | $0^{\circ}\text{C}$ to $+75^{\circ}\text{C}$         | $-5.2\text{V}$ to $\pm 5\%$       | $5\text{V} \pm 5\%$ |
| Commercial | 100K        | 101E    | $0^{\circ}\text{C}$ to $+85^{\circ}\text{C}$         | $-4.2\text{V}$ to $-5.46\text{V}$ | $5\text{V} \pm 5\%$ |
| Military   | 10K<br>10KH | 10E     | $-55^{\circ}\text{C}$ to $+125^{\circ}\text{C}$ case | $-5.2\text{V}$ to $\pm 5\%$       | $5\text{V} \pm 5\%$ |

## Capacitance

| Parameters       | Description        | Test Conditions | Max. | Units |
|------------------|--------------------|-----------------|------|-------|
| C <sub>IN</sub>  | Input Capacitance  |                 | 4    | pF    |
| C <sub>OUT</sub> | Output Capacitance |                 | 5    | pF    |

## Notes:

- See AC Test Load and Waveform for test conditions.
- Commercial grade is specified as ambient temperature with transverse air flow greater than 500 linear feet per minute. Military grade is specified as case temperature.
- Max. I<sub>BB</sub> = -1 mA.
- The internal gain of the CY101/10E383 guarantees that the output voltage will not change for common mode signals to ±1V. Therefore, input C<sub>MRR</sub> is infinite within the common mode range.
- These are absolute values with respect to device ground.
- Not more than one output should be tested at a time. Duration of the short should not be more than one second.
- I/O pin leakage is the worst case of I<sub>IX</sub> (where X = H or L).

E383-5

E383-6

#### Notes:

8. TTL test conditions assume signal transition times of 3 ns or less, timing reference levels of 1.5 V, input pulse levels of 0 to 3.0 V, and output loading of the specified  $I_{OL}/I_{OH}$ , and  $C_L = 10$  pF.
9.  $V_{IL} = V_{IL}$  Min.,  $V_{IH} = V_{IH}$  Max. on 10KH version.
10.  $V_{IL} = -1.7V$ ,  $V_{IH} = -0.9V$  on 101E version
11. ECL  $R_L = 50\Omega$ ,  $C_L < 5$  pF (includes fixture and stray capacitance).
12. All coaxial cables should be 50Ω with equal lengths. The delay of the coaxial cables should be "nulled" out of the measurement.
13.  $t_r = t_f = 0.7$  ns
14. All timing measurements are made from the 50% point of all waveforms.

T-52-11

CY10E383  
CY101E383**Nominal Voltages**

The CY101/10E383 can be used in dual  $\pm 5V$  or single  $+5V$  supply systems. The supply pins should be connected as shown in *Tables 1* and *2*. This connection technique involves shifting up all ECL supply pins by  $5V$ . When operating in single-supply systems, the ECL termination voltage level must also be shifted up by adding  $5V$ . For example, if the termination is  $50\text{ ohms}$  to  $-2V$  in a dual-supply system, the single  $+5V$  system should have  $50\text{ ohms}$  to  $+3V$ . If the termination is a Thévenin type, then the resistor tied to ground is now at  $+5V$  and the resistor tied to  $-5V$  is now at ground potential. Consideration should be given to the power supply so that adequate bypassing is made to isolate the ECL output switching noise from the supply. Having separate TTL and ECL  $+5V$  supply lines will help to reduce the noise. *Table 3* shows the CY10E383 nominal voltages applied in a  $10K$  system.

**Ordering Information**

| Speed (ns) | Ordering Code | Package Type | Operating Range |
|------------|---------------|--------------|-----------------|
| 2          | CY10E383-2JC  | J83          | Commercial      |
