Thermomagnetic Circuit Breaker, TMC

The TMC circuit breaker is available for 18 different rated current values, with a fast normal blow characteristic curve and a ie, two or three-position main current path. The auxiliary contacts are available in the following variants:

- 1-position main current path with 1 N/O or 1 N/C auxiliary contact
- 2-position main current path with 1 N/O and 1 N/C auxiliary contact
- 3-position main current path with 1 N/O and 2 N/C auxiliary contacts

Ordering example acc. to TMC type key:

One TMC with 1-position main current path, one N/O auxiliary contact, normal blow characteristic curve and a nominal current of 2 A has the following type designation:

TMC 1 M1 100 2A

TMC Type Key for Orders

All available TMC circuit breaker variants are listed in the index with their order numbers.

Note:

When mounted in serial with simultaneous load, mutual thermal interference occurs. This is equivalent to a rise in the ambient temperature. It depends on the nominal current, the ambient temperature, the number of devices and the distance between devices. The nominal current of the devices can either be transmitted over-dimensioned (see multiplication factor for temperature behavior) or at only > 80%. Please enquire about the max. permissible current for the planned serial assembly.

Ambient temperature °C	Multiplication Factor
- 10	0.84
0	0.92
+ 10	1.00
+ 20	1.00
+ 30	1.00
+ 40	1.08
+ 50	1.16
+ 60	1.24
