#### **FEATURES/BENEFITS**

- Power FET output with Very Low On Resistance - Virtually no offset with very low leakage and voltage drop.
- Optical Isolation Isolates control elements from load transients. Eliminates ground loops and signal ground noise.
- Three Terminal Output -Output FETs can be paralleled externally to change current load rating.
- Floating Output Allows for high and low side switching.
- Switches High Voltages and Currents - Voltages to 400 Vdc. Current to 2.5 Adc. Bi-directional, DC, or AC.
- High Noise Immunity -Control circuit cannot be triggered by output switching noise.
- 6 Pin Mini-DIP Package -Standard or surface mount available.

#### DESCRIPTION

The C60 series solid state relay is an advanced design capable of switching very heavy loads in a physically small 6 pin mini DIP package. These relays have a power FET output that ensures low On resistance, no offset voltage and low leakage current. They are versatile and can be used to switch AC, Bidirectional or DC loads. Optical isolation ensures complete protection of signal lines, power and ground bus and control circuits from switching
