ELECTRICAL SPECIFICATIONS

(Unless otherwise specified, these specifications apply for the operating ambient temperature $T_A = 25^\circ\text{C}$, $V_{CC} = 20\text{V}$, $V_{EE} = 20\text{V}$, $C_1 = C_2 = 1500\text{pF}$, $C_3 = C_4 = 1.0\mu\text{F}$, $I_{+1} = -I_{-1} = 0$, and $R_{SC} = 4.0\Omega$ for both positive and negative inputs. Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)

APPLICATION INFORMATION

C1 and C2 should be located as close to the device as possible. A 0.1µF ceramic capacitor may be required on the input lines if the device is located an appreciable distance from the rectifier filter capacitors.

C3 and C4 may be increased to improve load transient response and to reduce the output noise voltage. At low temperature operation it may be necessary to bypass C4 with a 0.1µF ceramic disc capacitor.
