

**MICROCHIP**

# MCP11/12

## Micropower Voltage Detector

### Features

- Ultra-low supply current: 1.75  $\mu$ A (max.)
- Precision monitoring options of:
  - 1.90V, 2.32V, 2.63V, 2.90V, 2.93V, 3.08V, 4.38V and 4.63V
- Resets microcontroller in a power-loss event
- Active-low  $V_{OUT}$  pin:
  - MCP111 active-low, open-drain
  - MCP112 active-low, push-pull
- Available in SOT23-3, TO-92 and SC-70 packages
- Temperature Range:
  - Extended: -40°C to +125°C (except MCP1XX-195)
  - Industrial: -40°C to +85°C (MCP1XX-195 only)
- Pb-free devices

### Applications

- Critical Microcontroller and Microprocessor Power-monitoring Applications
- Computers
- Intelligent Instruments
- Portable Battery-Powered Equipment

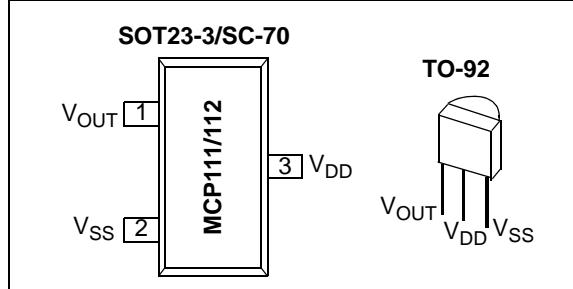

### Description

The MCP111/112 are voltage-detecting devices designed to keep a microcontroller in reset until the system voltage has stabilized at the appropriate level for reliable system operation. These devices also operate as protection from brown-out conditions when the system supply voltage drops below the specified threshold voltage level. Eight different trip voltages are available.

## 4.0 APPLICATION INFORMATION

For many of today's microcontroller applications, care must be taken to prevent low-power conditions that can cause many different system problems. The most common causes are brown-out conditions, where the system supply drops below the operating level momentarily. The second most common cause is when a slowly decaying power supply causes the microcontroller to begin executing instructions without sufficient voltage to sustain SRAM, thus producing indeterminate results. Figure 4-1 shows a typical application circuit.

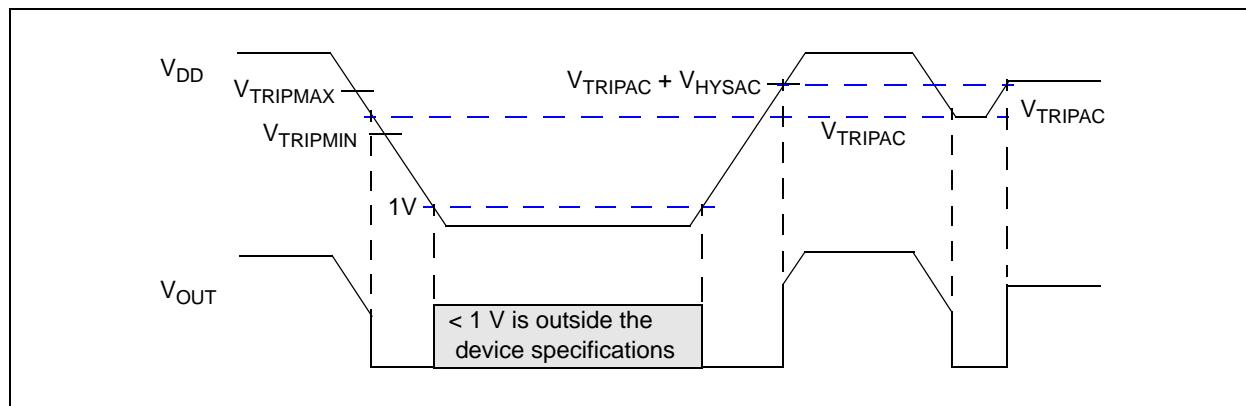

**FIGURE 4-1:** Typical Application Circuit.

## 4.1 $V_{TRIP}$ Operation

The voltage trip point ( $V_{TRIP}$ ) is determined on the falling edge of  $V_{DD}$ . The actual voltage trip point ( $V_{TRIPAC}$ ) will be between the minimum trip point ( $V_{TRIPMIN}$ ) and the maximum trip point ( $V_{TRIPMAX}$ ). There is a hysteresis on this trip point to remove any "jitter" that would occur on the  $V_{OUT}$  pin when the device  $V_{DD}$  is at the trip point.

Figure 4-2 shows the state of the  $V_{OUT}$  pin as determined by the  $V_{DD}$  voltage. The  $V_{TRIP}$  specification is for falling  $V_{DD}$  voltages. When the  $V_{DD}$  voltage is rising, the  $V_{OUT}$  pin will not be driven high until  $V_{DD}$  is at  $V_{TRIP} + V_{HYS}$ .

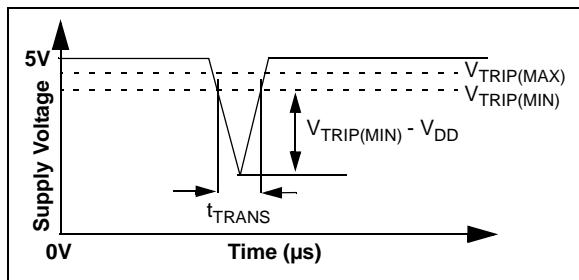

**FIGURE 4-2:**  $V_{OUT}$  Operation as Determined by the  $V_{TRIP}$  and  $V_{HYS}$ .

## 4.2 Negative Going $V_{DD}$ Transients

The minimum pulse width (time) required to cause a reset may be an important criteria in the implementation of a Power-on Reset (POR) circuit. This time is referred to as transient duration, defined as the amount of time needed for these supervisory devices to respond to a drop in  $V_{DD}$ . The transient duration time is dependant on the magnitude of  $V_{TRIP} - V_{DD}$ . Generally speaking, the transient duration decreases with increases in  $V_{TRIP} - V_{DD}$ .

Figure 4-3 shows a typical transient duration vs. reset comparator overdrive for which the MCP111/112 will not generate a reset pulse. It shows that the farther below the trip point the transient pulse goes, the duration of the pulse required to cause a reset gets shorter. Figure 2-18 shows the transient response characteristics for the MCP111/112.

A 0.1  $\mu$ F bypass cap mounted as close as possible to the  $V_{DD}$  pin provides additional transient immunity (refer to Figure 4-1).

**FIGURE 4-3:** Example of Typical Transient Duration Waveform.

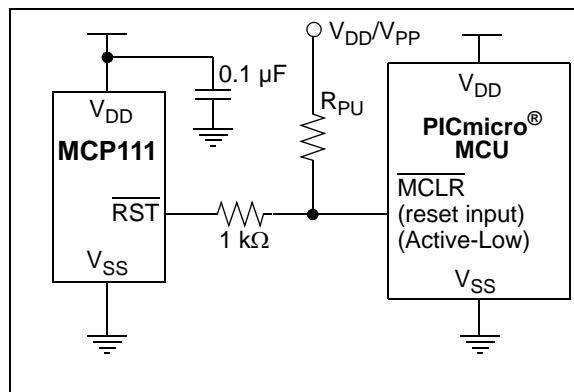

## 4.3 Effect of Temperature on Time-out Period ( $t_{RPU}$ )

The time-out period ( $t_{RPU}$ ) determines how long the device remains in the reset condition. This is affected by both  $V_{DD}$  and temperature. The graph shown in Figures 2-22, 2-23 and 2-24 show the typical response for different  $V_{DD}$  values and temperatures.

## 4.4 Using in PICmicro® Microcontroller ICSP™ Applications (MCP11 only)

Figure 4-4 shows the typical application circuit for using the MCP111 for voltage supervisory function when the PICmicro microcontroller will be programmed via the In-Circuit Serial Programming (ICSP) feature. Additional information is available in TB087, "Using Voltage Supervisors with PICmicro® Microcontroller Systems which Implement In-Circuit Serial Programming™", DS91087.

**Note:** It is recommended that the current into the RST pin be current limited by a 1 k $\Omega$  resistor.

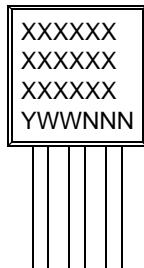

**FIGURE 4-4:** Typical Application Circuit for PICmicro® Microcontroller with the ICSP™ feature.

## NOTES:

## APPENDIX A: REVISION HISTORY

### Revision C (March 2005)

The following is the list of modifications:

1. Added **Section 4.4 “Using in PICmicro® Microcontroller ICSP™ Applications (MCP111 only)”** on using the MCP111 in PICmicro microcontroller ICSP applications.
2. Added  $V_{ODH}$  specifications in **Section 1.0 “Electrical Characteristics”** (for ICSP applications).
3. Added Figure 2-28.
4. Added devices features table to page 1.
5. Updated SC-70 package markings and added Pb-free marking information to **Section 5.0 “Packaging information”**.
6. Added **Appendix A: “Revision History”**.

### Revision B (August 2004)

1. Corrected package marking information in **Section 5.0 “Packaging information”**

### Revision A (May 2004)

- Original Release of this Document.

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>				
Device	Tape/Reel Option	Monitoring Options	Temperature Range	Package
Device:				
		MCP111: MicroPower Voltage Detector, open-drain MCP111T: MicroPower Voltage Detector, open-drain (Tape and Reel)		
		MCP112: MicroPower Voltage Detector, push-pull MCP112T: MicroPower Voltage Detector, push-pull (Tape and Reel)		
Monitoring Options:	195 = 1.90V 240 = 2.32V 270 = 2.63V 290 = 2.90V 300 = 2.93V 315 = 3.08V 450 = 4.38V 475 = 4.63V			
Temperature Range:	I = -40°C to +85°C (MCP11X-195 only) E = -40°C to +125°C (Except MCP11X-195 only)			
Package:	TT = SOT-23B, 3-lead LB = SC-70, 3-lead TO = TO-92, 3-lead			

**Examples:**

- a) MCP111T-195I/TT: Tape and Reel,  
1.95V option, open-drain,  
-40°C to +85°C,  
SOT-23B package.
- b) MCP111T-315E/LB: Tape and Reel,  
3.15V option, open-drain,  
-40°C to +125°C,  
SC-70-3 package.
- c) MCP111-300E/TO: 3.00V option, open-drain,  
-40°C to +125°C,  
TO-92-3 package.

- a) MCP112T-290E/TT: Tape and Reel,  
2.90V option, push-pull, -  
40°C to +125°C,  
SOT-23B-3 package.
- b) MCP112T-475E/LB: Tape and Reel,  
4.75V option, push-pull,  
-40°C to +125°C,  
SC-70-3 package.
- c) MCP112-450E/TO: 4.5V option, push-pull,  
-40°C to +125°C,  
TO-92-3 package.

## NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM  
CERTIFIED BY DNV  
=ISO/TS 16949:2002=**

*Microchip received ISO/TS-16949:2002 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona and Mountain View, California in October 2003. The Company's quality system processes and procedures are for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMS, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
