Description

The R-7XXX series is a high performance 2.5V to 15V, 2Amp to 4Amp, 12-Pin SIP (single in-line package), Integrated switching regulator (ISR). The Synchronous - rectified design yields excellent efficiencies up to 97%. Short circuit protection with crowbar function reduces the short circuit current to under 50mA of input current.

Notes:

- Requires a 100µF electrolytic or tantalum output capacitor for proper operation in all applications (the capacitor to be placed as close as possible to the output pins).
- ON / OFF pin driven by TTL (logic gate), open-collector bipolar transistor or open-drain MOSFET.

Standard Application Circuit

Add a blocking diode to Vout if current can flow backwards into the output pins, as this can damage the converter.

Output Current vs Input Voltage

How to calculate the max output current

The internal power dissipation(P_D) follows the equation:

$$P_D = I_o \times V_o \times (1-\eta)$$

$$I_o = P_D / V_o \times (1-\eta)$$

Where P_D = Internal power dissipation

I_o = Output current

V_o = Output voltage

η = Efficiency

Example: R-745.0P, at $V_{in} = 28V_{dc}$, $V_o = 5V_{dc}$, $\eta=91\%$ (see "Selection Guide" table)

(a) When $T_a = 60^\circ C$, $P_D = 1.4$ Watt (see beside diagram)

$$I_o = 1.4(W) / 5(V) \times (1-0.91) = 3.11(A)$$

(b) When $T_a = 85^\circ C$, $P_D = 1$ Watt (see beside diagram)

$$I_o = 1(W) / 5(V) \times (1-0.91) = 2.222(A)$$

(c) At $V_{in} = 12V_{dc}$ efficiency = 94% (see "Selection Guide" table)

When $T_a = 85^\circ C$, $P_D = 1$ Watt (see beside diagram)

$$I_o = 1(W) / 5(V) \times (1-0.94) = 3.33(A)$$
