

## FST16292

# 12-Bit to 24-Bit Multiplexer/Demultiplexer Bus Switch

### General Description

The Fairchild Switch FST16292 provides twelve 2:1 high-speed CMOS TTL-compatible multiplexer/demultiplexer bus switches. The low on resistance of the switch allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise.

The select pin connects the A Port to the selected B Port output. The A<sub>2</sub> Ports are not externally connected, thus have a 500Ω pull-down resistor to ground.

### Features

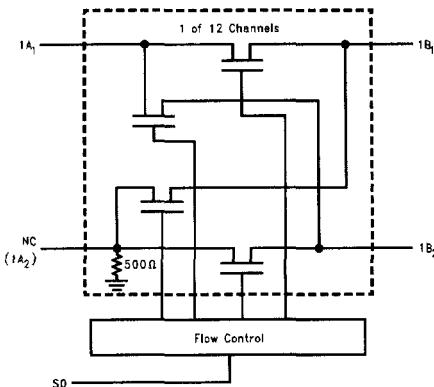

- 4Ω switch connection between two ports.
- Minimal propagation delay through the switch.
- Low I<sub>cc</sub>.
- Zero bounce in flow-through mode.
- Control inputs compatible with TTL level.
- Internal 500Ω pull-down resistor on A<sub>2</sub> port.

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 2:** The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.

Note 5: This parameter is guaranteed by design but is not tested. The bus switch contributes no propagation delay other than the RC delay of the typical  $O^{\circ}$  resistance of the switch and the 50pF load capacitance, when driven by an ideal voltage source (zero output impedance).

## Capacitance (Note 6)
