

V831™ 32-BIT RISC MICROCONTROLLER

The V831 microcontroller is the second member of NEC's V830™ family of 32-bit RISC microcontrollers. This high-performance, low-power microcontroller is well suited for embedded, image processing and networking applications. The V831 device integrates the V830 microprocessor core with on-chip external memory support and standard peripherals that include a DMA controller, DRAM/EDO/page-mode ROM controllers, UART, clocked serial interface, and timers. With its on-board peripherals, the V831 microcontroller provides a cost-effective solution for consumer electronics applications.

SPECIFICATIONS

- Clock frequency: 33 to 100 MHz
- Performance
 - 118 Dhrystone MIPS at 3.3V
 - 157 MIPS/W
- 32-bit single-cycle MAC instruction (200 MIPS)
- 32-bit external data bus
- Power consumption: 750 mW at 100 MHz at 3.3V (max.)
- DRAM/EDO/DRAM/page-mode ROM controllers
- Enhanced JTAG debugging (N-wire)
- UART, clocked serial interface, baud rate generator, and two timer/counters
- 20 interrupt sources with four program-mable priority levels
- 16K of instruction and data cache/RAM
- Four channel 8-/16-/32-bit DMA controller
- Three I/O ports
- 0.35-μm CMOS process technology
- 3.3V V_{DD}

BLOCK DIAGRAM

FEATURE DESCRIPTION

CPU

200-MOPS MAC instruction

- High-performance microprocessor
 - Five-stage pipeline control
 - Thirty-two general-purpose 32-bit registers
 - 64-bit barrel shifter
 - 32-bit MAC unit
- Powerful RISC instruction set
 - 102 16- and 32-bit RISC instructions
 - Single-cycle MAC instruction (32 bits x 32 bits → 64-bit result)
 - Saturated arithmetic operation (with a saturation detection function)
 - One- and two-cycle double-word shift (64-bit data)
 - High-speed look-ahead branch
 - Block load/store instructions
- Fast instruction execution: 10 ns at 100 MHz

INTERRUPTS

- 20 maskable and prioritizable interrupts plus NM I
- Four programmable priority levels

MEMORY

- 4KB instruction RAM with 4K instruction cache (direct mapping)
- 4KB data RAM with 4K data cache (direct mapping/write through)
- 128-MB linear address memory space

EXTERNAL BUS INTERFACE

- Single and 16-byte burst transfer modes
- Separate 24-bit address and 32-bit data buses
- 32-/16-bit data bus sizing
- Bus hold/lock
- Seven chip select outputs

OTHER FUNCTIONS

- Sleep/stop modes
- Internal clocks (3x PLL)

PERIPHERALS

- DRAM controller (RAS/CAS and EDO mode)
- Page-mode ROM controller
- Two 16-bit timer/counters with five capture/compare registers
- UART and clocked serial ports with baud rate generator

DMA CONTROLLER

- Four-channel controller
- 16-MB byte count
- 128-MB address range
- Memory ↔ memory and memory ↔ I/O
- 32-/16-/8-bit data width
- External terminal count pin

DEVELOPMENT TOOLS

- High-performance optimized C compilers (NEC, Green Hills, MetroWerks)
- Real-time operating systems
- High-level language debugger with GUI
- ROM-ICE emulator
- N-wire ICE
- Evaluation board
- Middleware libraries
 - M H/M R/M M R
 - J B G , J P E G , M P E G
 - S O F T M O D E M
- P C I / F O compatibility

ORDERING INFORMATION

PART NUMBER

μPD 705101GM -100-8ED

PACKAGE

160-pin plastic QFP (24 mm x 24 mm)

All other trademarks are the property of their respective owners. Subject to change without notice. No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics Inc. (NEC EL). The information in this document is subject to change without notice. ALL DEVICES SOLD BY NEC EL ARE COVERED BY THE PROVISIONS APPEARING IN NEC EL TERMS AND CONDITIONS OF SALES ONLY, INCLUDING THE LIMITATION OF LIABILITY, WARRANTY, AND PATENT PROVISIONS. NEC EL makes no warranty, express, statutory, implied or by description, regarding information set forth herein or regarding the freedom of the described devices from patent infringement. NEC EL assumes no responsibility for any errors that may appear in this document. NEC EL makes no commitments to update or to keep current information contained in this document. The devices listed in this document are not suitable for use in applications such as, but not limited to, aircraft control systems, aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. "Standard" quality grade devices are recommended for computers, office equipment, communication equipment, test and measurement equipment, machine tools, industrial robots, audio and visual equipment, and other consumer products. For automotive and transportation equipment, traffic control systems, antilock and anti-collision systems, it is recommended that the customer contact the responsible NEC EL salesperson to determine the reliability requirements for any such application and any cost added. NEC EL does not recommend or approve use of any of its products in life support devices or systems or in any application where failure could result in injury or death. If customers wish to use NEC EL devices in applications not intended by NEC EL, customers must contact the responsible NEC EL sales people to determine NEC EL's willingness to support a given application.
