

ACSM-2007 SCHOTTKY DIODE MODULE DETECTORS

Frequency Range (min)	2 – 12	GHz
Sensitivity (min)	2000	mV/mW
Flatness vs. Frequency (max)	0.9	±dB
Typical TSS	-52	dBm
Nominal Video Capacitance	20	pF

NOTES:

Maximum input power: +20dBm

Sensitivity is measured into an open circuit load (>10k ohm).

Video capacitance is used for RF bypass. This value can be changed if required for video response time. Contact the factory for more information.

Standard bias is 100uA.

This part number is also available with a zero bias schottky diode.

Due to higher impedance, the zero bias schottky will exhibit less sensitive TSS (typically a 3dB reduction)

The temperature performance of the zero bias schottky is poor when operating at low input power levels.
